Dear DNR Representatives,

Please do NOT approve a 7 million per day water diversion to FoxConn from Lake Michigan. Lake Michigan is one of the world's largest sources of fresh water but it is not unlimited. Lake Michigan is worthy of protection to keep it healthy and sustainable for the residents in the states surrounding it that depend on it for survival. Diverting up to 7 million gallons per DAY to a foreign manufacturer that admits it would poison most of it with solvents and evaporate a great deal of if does not ensure the health and sustainability of this important natural resource. This combined with a recent approval to divert Lake Michigan water to Waukesha is a recipe for disaster. It is up to the government to protect the residents from poisons and unscrupulous businesses that prioritize profit over safety. Please do not sacrifice our precious Lake Michigan for profit.

Sincerely,

Michelle Boehm
