Subject:	Foxconn proposal to take water out of lake Michigan
Date:	Thursday, February 01, 2018 8:26:38 PM

I want to express my concern over the proposal of allowing Foxconn to take 7 million gallons of water from Lake Michigan a day. The proposal says that the water will be treated and returned to the lake.

It is difficult to believe that all of the water will be returned to the lake, as evaporation, spills, etc. occurs. If that is the fact let them set up a tank with 7 million gallons of water and just recycle it .

We cannot continue to take and use our resources without thinking about the future. It is time to protect our resources so that they are there for future generations.
