Register my opposition to the 7 million gallons Foxconn estimates they will divert from Lake Michigan daily.

Why wasn't this figured out right from the start and WE THE PEOPLE of Wisconsin, Illinois, Michigan, Indiana and Canada know about this before any deal was made, so concerns could be reviewed? Was this purposely omitted or incompetency? Either way this is WRONG!

Now the question is how to correct this? What will the result of this be on the MIllions of citizens in diverting the water to a FOREIGN COMPANY? How would the toxins be FULLY removed from the waste stream? There was more concern put towards letting outer communities use our water than the instantaneous approval of this deal!!!! Are people less valued than a company? And what will happen when the water is not replaced???

I doubt my opinion will count for much given I am not a wealthy republican donor. But Mr. Walker you have neutered the Wisconsin DNR, so that our land and water can recklessly be sacrificed to enrich wealthy stakeholders.
