Racine,
I hope this gets to you and that you will consider my comment below. Thank you for the opportunity.

I'm against Foxconn being allowed to not return 40% of the water they divert.

But it's very important that all the water they return be clean. I'm worried they're going to pollute Lake Michigan and turn Lake Michigan into a polluted body of water.

Lake Michigan is already under threat from pollution on many fronts. In addition, they are owned by China and China is notorious for polluting. How was that not considered when they were allowed to move here?!

Please don't let Foxconn return polluted water into the water table nearby, not into rivers, not where it can find its way into our drinking water.

Please make sure you monitor them when they're here, because they're going to pollute if you give them any opportunity. You've got to understand this! I hope you will care about this. This is at your doorstep, after all.

Gov. Walker didn't do his homework on this deal. Did Lake Michigan and the water table not cross his mind? Does he even care about pollution or Lake Michigan? He should have examined this company's track record and he should have understood the dangers of polluting Lake Michigan and nearby waterways. And Wisconsin didn't even get a good tax deal out of it. My understand is taxpayers are going to be paying them, not the other way around?!! China must be laughing over how they suckered Wisconsin politicians into this deal. All so Walker can say he brought jobs here. They destroy our beautiful state for a company known for polluting. Great job, Walker, Ryan and other politicians in Wisconsin who approved this.

Thank you for your time.
