To Whom it May Concern,

I have grave concerns about the application to divert water to the Mount Pleasant Community for the use of Foxconn Corp. This is a dangerous precedent to set, and Foxconn must not be granted exceptions or waivers that prevent a complete and thorough review of the precedent and impact that such huge use by a corporation, not public citizens, on our precious Great Lakes water, would bring. How will such consumption be replenished to the Lakes? How will Foxconn guarantee treatment of their used water to prevent contaminated and pollution? I urge you to force our representatives and Foxconn to slow down its process and allow stakeholders to weigh in about how to deal with its water needs, without corrupting an essential compact that holds our water in trust for people, not corporations. Where else could Foxconn get its water from? How could they get that water without stepping all over citizens who live here and hope to continue to live here for generations to come?

Thank you,
