I have great concerns about Foxconn will they be held to higher standards are they going to pollute our water? Some of the things I've heard about them haven't been the greatest now that they're coming to the states and Racine, and I live in Racine.Is it going to affect my children's drinking water ? Is it going to affect the water at school? Is it going to turn North Beach into a lot of pollution ?I just want to make for sure what they put back in our Lakes is safe. From , Temika King .
