Please register my opposition to the 7 million gallons Foxconn estimates they will divert from Lake Michigan daily. This is totally irresponsible, I have no confidence that the treatment facilities will be able to fully remove toxins from the waste stream. Millions of citizens in multiple states depend on Lake Michigan water, to let this foreign company divert this resource is irresponsible. Why wasn't this presented to the people of Wisconsin, Illinois, Michigan and Indiana prior to the contract being signed by Gov Walker? All of these states are stake holders in this diversion, as well as Canada.
I doubt my opinion will count for much, given that Gov Walker and wealthy out of state business interests have neutered the Wisconsin DNR, so that our land and water can be recklessly sacrificed to enrich wealthy republican donors.
