Hello

Here are my comments on the proposed water diversion on 7 million gallons a day out of Lake Michigan near Racine, WI. This diversion would be detrimental to our water levels and overall health of one of the Great Lakes. Human impacts to these lakes are already causing problems, ie invasive species, water clarity, etc. we should be targeting our efforts to conservation of the Great Lakes as well as limiting human interventions. Do not allow this diversion of high water use to Lake Michigan. Thank you for considering my comments. Sue Kartman
