Please deny Racine's Lake Michigan water diversion application.

I am concerned that out of the daily 7 million gallons, only about 60 percent would be treated and returned to the lake. Maximizing the amount of returned water needs to be a priority and this application doesn't cut it.

The whole point of the Great Lakes Compact is to essentially keep Great Lakes water in the Great Lakes.

Great Lakes diversions are only supposed to be for public water supplies. Providing this much of our natural resources to a private company for their gain is ridiculous.

Please do not approve this application. At a minimum the application needs to be reconfigured to keep our natural resources healthy and plentiful.
