Subject:	Opposed to water usage proposed to Foxconn
Date:	Friday, February 02, 2018 1:49:49 PM

My name is Pamela Mazzanti and I am a resident of
Mt. Pleasant. I have lived in the state for less than 2 years.
I am appalled at the changes that are proposed
for big business. This is why I moved out of Illinois. Up until now my
community has not been asked for any feedback to the changes
going on around us.

We are easing regulations on factory emissions
to accommodate the pollutants their factory will spew
as well as giving them free reign to destroy wetlands without
regard for wildlife and the water shed protection it ensures.
Understood they would be required to "create additional watershed
to replace that destroyed" but this is of no consolation.

We have been told we need to build them a Power Plant
with the burden being on the taxpayers.

Now they are looking to draw on mass amounts of fresh water
from the Great Lakes. 3% of the Earths water is Fresh Water.
Approximately 20% of this of this fresh water lies in the Great Lakes. Our environment
is fragile and water is a valuable resource. We cannot allow big business
to come in and drain our resources and pollute our environment.
Foxconn has run into problems in China with pollution. Aren't we a bit
naïve to think they will treat this site any differently than others?

When is enough enough? I moved to Wisconsin for clean air, a better way
of life, proximity to the lake. The state of Wisconsin was recently rated one
of the best states to live in. Do not make the mistake that will have
grave consequences for our lake.

Best Regards

Pam Mazzanti
