Subject:	DENY Foxconn"s Water Diversion Application
Date:	Wednesday, March 14, 2018 9:47:22 AM

To Whom It May Concern,

I urge you to consider the full impact of Foxconn's application to divert water from Lake Michigan. Deny this application request to ensure the future environmental health of our state. Water is life.

The people that live in this state need and deserve access to clean safe water. The Great Lakes Water Compact was established to protect the water, diverting the water for a commercial use that hasn't been fully studied is incredibly irresponsible and short-sighted. How will the water be used in Foxconn's manufacturing process? What will the water quality be once it's returned to our great lake? There seems to be no clear answer to these questions. Spoiling one of our states greatest natural assets to cater to a foreign owned company already receiving tax subsidies is absolutely absurd.

How long will the working people of this state have to cater and pay for the "needs" of large corporations?

Think of our future, the future for our children and the generations after us. Do we want to leave a legacy of environmental neglect? WE can do better as state. As the DNR it is your responsibility to protect our lands, our water and the natural resources of this state. What's the point if you don't?

Please consider your actions and what they will determine for our future as a state. Leave a legacy of conservationism, not destruction.

In Sadness,
