Motorized Recreation Grant Application

For: (choose all that apply)

☒ ATV/UTV Trail Aid
☒ Snowmobile Trail Aid

Form 8700-159 (R 02/2024)

Notice: Completion of this form is required under Wisconsin Statutes 23.09(26) and 23.33. Failure to complete this form will result in denial of financial assistance. Personally identifiable information found on this form is not intended to be used for any other purpose. The Department of Natural Resources (DNR) may provide this information to requesters as required by Wisconsin's Public Records law {ss. 19.31 – 19.39, Wis. Stats.}.

Instructions: Applications may combine more than one source of funds. They may be submitted for consideration of traditional ATV, UTV, Snowmobile and Motorized Stewardship funding. Submit one copy of all forms and attachments. See Page 2 for necessary attachments. Send applications to your Community Services Specialist.

Section 2: Project Information Required for all Projects

Project Title	Current Funded Miles	New Miles (if applicable)
Cheese Country Trail Bridge #47 Replacement		

County	Township	Range	Section	¼ ¼	¼	GPS Coordinates:
Green	01 N	7 ◉E ○W	4	SE	SW	Lat. 42.5593442 Long. -89.675092

Project Description Summary

Proposed project is the complete replacement of Bridge #47 on the Cheese Country Trail over the Honey Creek in Green County. Project scope is to include removing deteriorated components and replacement with a new structure.

During a routine bridge inspection, major deficiencies were found in the bridge structure requiring closing the structure to any use and continues to be closed.

Currently here is the breakdown of the request from all grant programs:

RTP = $100,000.00 (17%)
ATV/UTV = $237,676.50 (41.5%)
Snowmobile = $237,676.50 (41.5%)

☒ I certify that all maintenance land use agreements are on file.

Estimated Cost

Maintenance	Acquisition	Insurance	Development	Bridge Rehab.	Trail Rehab.	Total Estimated Cost
				$575,353.00		$575,353.00

Funded Trail Name or Number (SNARS if applicable): Cheese Country Trail

Has this bridge site ever received development or rehabilitation funds in the past? ○ Yes ◉ No Year:_____ $_____

Bridge is located on: ◉ Private property ○ Public property

Old Bridge/Culvert Size: 12' X 155'

New Bridge/Culvert Size: 12' X 155'

Landowner Where Bridge is Located	Telephone Number	Length of Trail Use Agreement (5 year minimum)
Pecatonica Rail Transit Commission		Non-Expiring

Current maximum load	Proposed maximum load	Age of Bridge	Bridge Material
25,000 lbs.	25,000 lbs.	50+	Wood foundations and superstructure

Sponsoring Club Name	Club Contact	Telephone Number
Tri-County Trail Commission	Max Blackbourn	(608) 776-4893

Do you have your trail bridges posted as to maximum load? ○ Yes ◉ No

What is the maximum load of the other bridges on the system if groomed with this bridge?
At this time, maximum loads on the trail system are variable due to varying conditions of bridges.

What is the weight of your puller & drag/grading equipment?
~25,000

What other recreational trail uses are planned for this bridge?
Pedestrian, bicycle and e-bicycle

If there are other Recreational uses planned, how much of the bridge cost will be paid for by non-snowmobile or non-ATV users?
None.

○ Yes ◉ No Have you contacted your local DNR Water Management Specialist (WMS) regarding a permit?
◉ Yes ○ No Is a permit needed? (Please provide any written correspondence from WMS.)
○ Yes ◉ No Have you contacted your County Zoning Dept. regarding a floodplain determination?
◉ Yes ○ No Will an H & H (hydrologic and hydraulic) study be required?

Bridge Project Detailed Description

Proposed project is the complete replacement of Bridge #47 on the Cheese Country Trail.

In a routine bridge inspection completed by NBI Engineering, critical deficiencies were found in the foundation of the bridge resulting in the closure of this bridge.

Currently we are looking at proposing a new 12' X 155' new bridge structure. All degraded wooden components will have to be replaced. Since the structure is so old, changes will have to be evaluated for floodplain compliance.

A pre-application meeting will be scheduled in the immediate future with DNR WMS for permitting requirements and with county zoning to work through floodplain permitting and H&H work that will be needed.

Appendix A (continued)

Summarize Costs in Appropriate Categories:

Bridge Structure

		Quote 1	Quote 2
		◉ Steel ○ Wooden	○ Steel ○ Wooden
Bridge Dimensions:			
Bridge Manufacturer:		TBD	
Design Weight Load		lbs.	lbs.
Cost of Structure:	1. Engineering	$ 71,808	$
	2. Structure	$ 422,400	$
	Subtotal	$ 494,208	$

Installation Costs:	Quote 1	Quote 2
	◉ Contractor or ○ Sponsor	○ Contractor or ○ Sponsor
	Estimate	Estimate
1. Engineering (includes construction labor to see attached cost estimate)	$ 61,645	$
2. Site Preparation	$	$
3. Abutments	$	$
4. Pilings/Piers	$	$
5. Approaches	$	$
6. Riprap	$	$
7. Labor	$	$
8. Equipment Rental	$	$
9. Culverts	$	$
10. H & H Study	$	$
11. Wetland Delineation	$	$
12. Other Soil Borings	$ 19,500	$
Subtotal	$ 81,145	$
Total Cost	$ 575,353	$

For the application grant, you must take the lowest of the two quotes.

Bridge #47

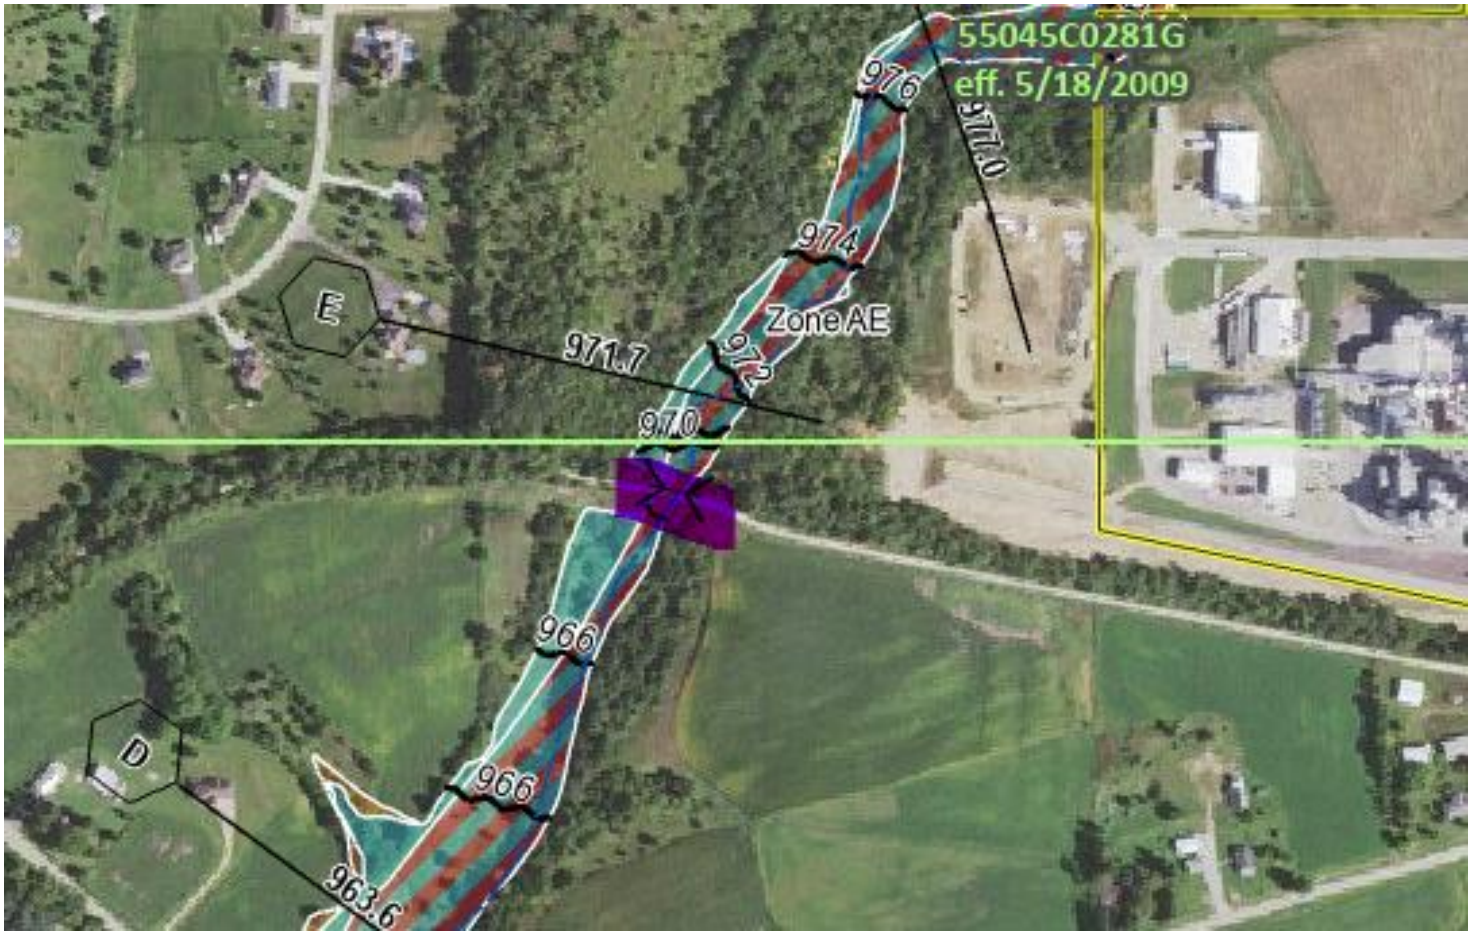
Guidelines for Applicant

Complete this form for each bridge structure you are submitting a grant application for. Provide any additional documents not requested on application checklist to substantiate your points, including actual deeded easements.

This ranking tool is used for both **Snowmobile** and **ATV/UTV** Trail Aids programs, though each program may score things differently. If you are seeking funding from BOTH programs for a dual use bridge, please score ALL questions

	Category	Possible Points	Snow Points	ATV/UTV Points
1	**Condition of the Structure** (max of 10 points)			
	Has a certified bridge inspection report that supports the project & demonstrates need. Copy of report needed. Snowmobile Funded Projects	10	10	
	Calculation: 10 minus NBI Rating Score (0-9) ATV Funded Projects *Use overall NBI # if provided, or an average of the components. Redecking projects should just use the deck NBI #.*	10		9
2	**Permits** (maximum points 4)			
	Consultation with DNR Water Mgmt Specialist has occurred & permit is likely, if needed	1	–	–
	Permit in hand / Bridge already permitted	3	–	–
3	**Funding** (maximum points 2) Has an application been submitted for other funding			
	50% or greater from other funding source(s)? (includes 50/50 Snow/ATV projects)	2	2	2
	11% - 49% from other funding source(s)?	1	–	–
4	**Length of Written Easements or Land Use Agreement** (max points 5)(ch. 23.09(26)(am)1 WI Stats)			
	On public land (County, State, Federal)	5	5	5
	10 or more year **deeded easement** on private land or other public land, for all portions of that trail to the nearest road on each side of the bridge	5	–	–
	3-9 year **deeded easement** on private land or other public land, for all portions of that trail to the nearest road on each side of the bridge	4	–	–
	10 or more year **deeded easement** on private land or other public land, for just the bridge site	3	–	–
	3-9 **deeded easement** on private land or other public land, for just the bridge site	2	–	–
	10 or more year land use agreement (LUA, not deeded) on private land or other public land	1	–	–
	3-9 year land use agreement (LUA, not deeded) on private land or other public land	0	–	–
5	**Miles Impacted** – How many miles will need to rerouted if the structure is not replaced? Measured from nearest intersection on both sides of the bridge. (max 4 points)			
	Less than 20 miles Snowmobile Funded Projects	1	1	
	20 miles or more Snowmobile Funded Projects	3	–	
	No other snowmobile trails connect. Snowmobile Funded Explain:	4	–	
	For ATV/UTV projects, describe the relocation (on routes? Trail?) Include sketch/map		✓	
6	**If ATV/UTV, Seasons of Use** (max 3 points)			
	Year-Round or Summer Only ATV/UTV Trail	3		3
	Winter Only ATV/UTV Trail	1		–
	DEDUCTIONS			
7	**County Active Project Deduction** (maximum deduction 1 point) A snowmobile active project is one that has exceeded it's initial grant period.			
	Two or more active projects - deduct 1 point	-1	-1	
	GRAND TOTAL		17	19

Trail re-route because of #47 closure.



Bridge is located in the purple highlighted area. This area is within FEMA regulated floodplain.

Inspection Report for

Bridge #47

Cheese Country Trail over Honey Creek

Executive Summary

Recommended Inspection Frequency:

- Not Applicable – **Recommend Immediate Closure**.

Estimated Remaining Longevity:

- The efforts required to return the bridge to service are likely not economically feasible given the extent of the observed damage and complexities of the required repairs. Additional investigations would be required to determine the feasibility of a comprehensive rehabilitation plan.

Summary of Channel Conditions:

- **The west embankment is in a state of imminent failure**. Extensive erosion at the toe of the west embankment has caused a15ft-20ft vertical embankment to be retained by remnants of a critically decayed timber wall. Failure of the embankment would likely destabilize Pier W2, resulting in a full, or partial, collapse of the bridge.

Summary of Structural Conditions:

- Severely decayed timber components observed throughout the bridge. Several beams show signs of horizontal shear cracking. Multiple piles and pile caps have significant section losses, are vertically split, and isolated piles show signs of crushing. This bridge is particularly vulnerable to collapse due to height and configuration of the piers.

Maintenance/Repair Recommendations:

- **Owner notified of Critical Finding: Bridge should be immediately closed to all traffic**.

Summary of Inspection Intent, Procedures, and Limitations

- NBI Engineering Services personnel visited the above referenced structure to observe the existing conditions and collect information on behalf of The Tri-County Trail Commission. The purpose of this inspection was to determine the physical and functional condition of the bridge.
- Observations have been limited to readily available surface conditions. No destructive or invasive testing procedures, load rating, or detailed measurements have been performed as part of this inspection. NBI Engineering Services reserves the right to revise our opinions if additional evidence becomes available.
- Timber conditions were evaluated by visual inspection and acoustic sounding.
- Due to access limitations, assessment of components above 6 ft above grade was limited primarily to visual observation.
- Beams and piers inspected from the ground and deck via pole cam.
- The facility was open to traffic during the inspection.
- No plans or prior inspection information for the structure have been provided.

SNBI Condition Ratings & Commentary

Deck (C.01) | 4 | Poor Condition – Deteriorating

1. Concrete slab (wearing surface) over timber crossties(deck).
2. Moderate wear of concrete throughout wearing surface, most pronounced along wheel lines. Multiple unsealed moderate/wide width transverse cracks throughout concrete slab.
3. Timber crossties decayed and split at ends. Signs of decay throughout all timber components. Timber preservative treatment is no longer effective.

Maintenance/Repair Recommendations

No feasible rehabilitation options to extend longevity of component.

Railings (C.05) | 5 | Fair Condition – Stable

1. (3) rows of W-beam bridge rail supported by angled timber posts.
2. Initial signs of incipient decay of timber components. Timber preservative treatment appears marginally effective.
3. Isolated areas of minor damage to w-beam rails.

Maintenance/Repair Recommendations

No recommended maintenance/repair recommendations.

Transition Railings (C.06) | **N/A** | Not Applicable

Joints (C.08) | **N/A** | Not Applicable

Superstructure (C.02) | 3 | Serious Condition - Deteriorating

1. (2) lines of timber beams each comprised of (3) through-bolt connected laminations.
2. Beams decayed +/-75% throughout with widespread prominent checking and generally appear hollow when sounded. Widespread areas of horizontal shear cracking.
3. No readily evident signs of crushing.
4. Beams are highly susceptible to overload damage.

Maintenance/Repair Recommendations

No feasible rehabilitation options to strengthen or extend longevity of component.

Bearings (C.07) | **N/A** | Not Applicable

Substructure (C.03) | 1 | Imminent Failure – Deteriorating

Abutments:

1. Driven timber piles, timber pile caps, and timber backwall plank.
2. Decayed timber components throughout with no signs of crushing.
3. Caps are decayed and generally appear hollow when sounded with an estimated 75% loss of section throughout with more advanced decay at the ends. Widespread areas of checking and full depth splitting.
4. Piles: Exposed bearing piles sound hollow with an estimated 75%-90% loss of section with several split piles.

Pier(s):

1. Piers W1-W3 and W7-W10: Driven timber piles with timber pile caps.
2. Piers W4-W6: Poured concrete footings with timber sill beams under timber pile bents with timber pile caps.
3. **The west embankment is in a state of imminent failure which could destabilize Pier W2 and cause a full, or partial collapse of the bridge**.
4. Decayed timber components throughout with signs of crushing.
5. Multiple caps are severely decayed and are splitting/separating.
6. The bottom sill beams are severely decayed with the sill crushing in Pier W6.
7. Piles are decayed with significant section losses throughout with multiple piles visibly hollow and split. Pile S5 in Pier W7 is starting to crush. The tapered driving tip of Pile S2 in Pier W7 is exposed, indicating negligible pile embedment.

Maintenance/Repair Recommendations

No feasible rehabilitation options to strengthen or extend longevity of component.

Channel (C.09) | 1 | Imminent Failure - Deteriorating

1. Embankment Erosion: **The west embankment is in a state of imminent failure**. Severe erosion at the toe of the west embankment has caused a15ft-20ft vertical embankment to be retained by remnants of a critically decayed timber wall. *See included channel profile sketches included as Figures 1-3, included with this report*. Erosion at Pier W7 has exposed the tapered pile tip of Pile W2.
2. Drift: Flood debris caught on upstream face of piers.
3. Channel Change: Waterway flows through spans W4-W6 and around Piers W3-W6.
4. Adequacy of Opening: No readily visible signs of overtopping.

Maintenance/Repair Recommendations

See Channel Protection.

Channel Protection (C.10) | 1 | Imminent Failure - Deteriorating

1. Vegetation: Channel is well vegetated.
2. Channel Protection: Failing remnants of a critically decayed timber wall at the west embankment between Piers W2-W3. Failure of the timber wall is expected to result in the collapse of the west embankment, which may cause the collapse of Pier W2. Stone masonry wall at east embankment between Piers W6-W7 is in fair condition.

Maintenance/Repair Recommendations

Comprehensive channel stabilization efforts may be possible, however additional investigations would be required to determine the feasibility of a comprehensive rehabilitation plan.

Scour (C.11) | 1 | Imminent Failure - Deteriorating

1. Streambed Scour: Natural earthen streambed is moderately prone to scour. Negligible channel scour observed throughout opening.

Maintenance/Repair Recommendations

See Channel Protection.

Channel Profile Sketches

1. Measurements were collected with a weighted tape measure over the bridge rail. Distances are referenced from the top of the pile caps and should be considered approximate. Cross bracing locations (when shown) are approximate and are for reference purposes only.
2. No information has been provided to establish the original channel profile. Locations shown below have been approximated based on observed conditions, location of pier bracing, and the presence of a cast-in-place concrete block in the channel. The original channel profile may vary considerably from illustrated representation which has been included for reference purposes only.
3. Pile tip elevations are unknown and have been shown to a depth of 40 feet below the top of pile caps. This should be considered as the maximum possible depth of penetration due to the presence of readily visible bedrock in the streambed. Pile tip elevations likely vary throughout the bridge and shallower pile elevations should be assumed. The tapered driven tip of Pile S2 in Pier W7 is exposed, indicting negligible remaining embedment, and therefore includes a tip elevation shallower than is shown in Figure 1, below (see Photo 49).

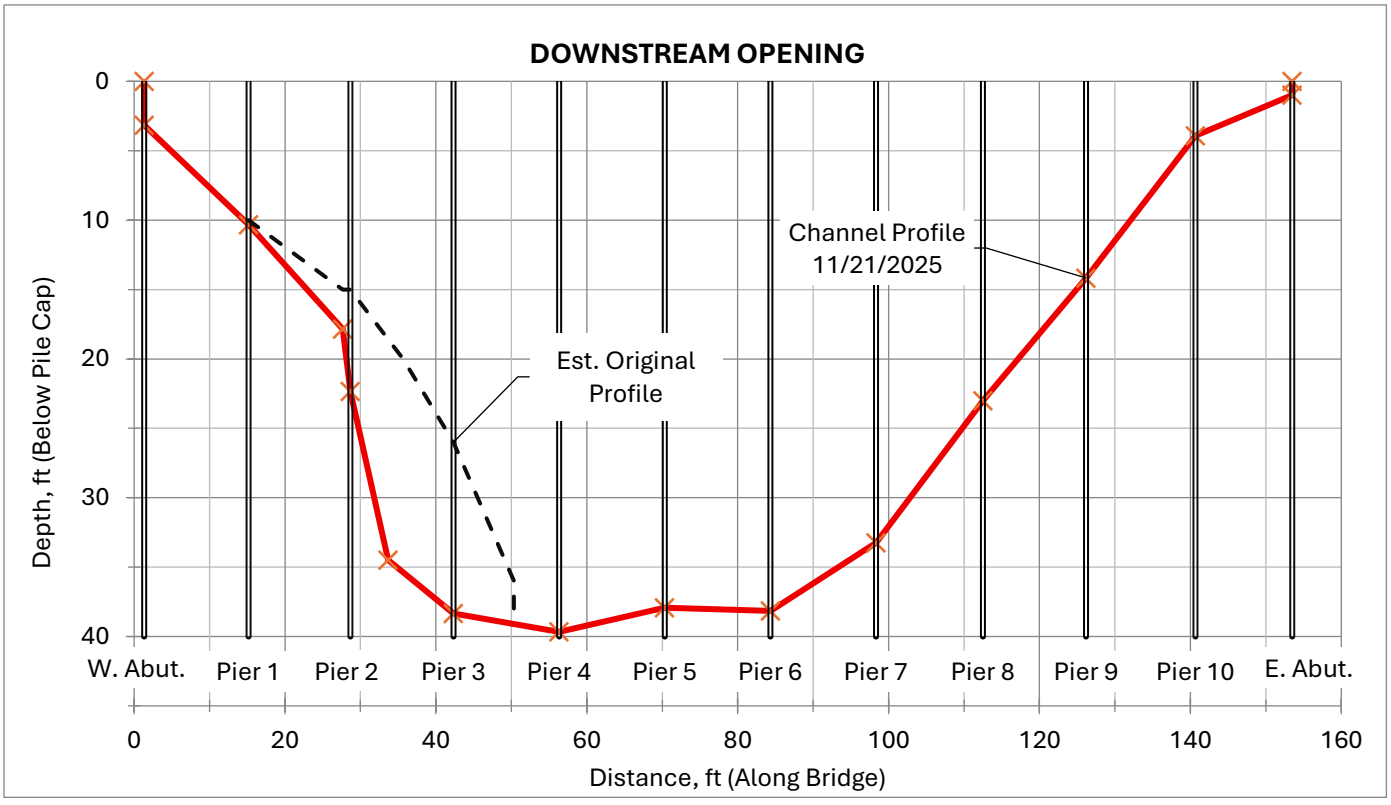

Figure 1. Downstream Channel Profile-Full Bridge Length

Substructure

Substructure Rating: **1**

Quantity in Condition State

	Element	Defect	Description		OUM	Total	1	2	3	4
Abutments	216		**Substructure-Timber-Abutment**	**4**	LF	28			28	
			Timber Backwall Plank - Timber pile with backwall plank abutment.							
		1140	TBR-Decay/ Section Loss/ Abrasion/ Wear		LF				14	
			CS3: Timber plank showing signs of incipient decay.							
		4000	Settlement		LF					
			No readily visible signs of settlement.							
		6000	Scour		LF				14	
			CS1: Both abutments beyond channel flow. No signs of undermining of backwall plank.							
	Protective Coatings: CS4: Timber preservative treatment ineffective.									
	235		**Substructure-Timber-Pile Cap-Abutment**	**3**	LF	28			14	14
			Timber Pile Cap - Timber pile with backwall plank abutment.							
		1140	TBR-Decay/ Section Loss/ Abrasion/ Wear		LF				14	**14**
			CS3/CS4: Caps sound hollow with soft/easily dented shells-estimated +/-75% decay/section loss-more severe at ends. Prominent horiz. and vert. checking throughout. No definitive signs of crushing. Vertical split throughout length of caps-most severe at north ends of both caps.							
	Protective Coatings: CS4: Timber preservative treatment ineffective.									
	228		**Substructure-Timber-Pile-Abutment**	**3**	EA	10			5	5
			Timber Piles - Timber pile with backwall plank abutment.							
		1140	TBR-Decay/ Section Loss/ Abrasion/ Wear		EA				5	**5**
			[5] Bearing piles per abutment. Less than 2ft of piles exposed. CS3/CS4: Tops of piles sound hollow with moderate to wide checking throughout. No definitive signs of crushing. All piles decayed with +/- 75% loss of section. Multiple piles split and decayed >75%.							
	Protective Coatings: CS4: Timber preservative treatment ineffective.									
Wingwalls	8400		**Wingwall-Timber**	**4**	EA	4			4	
			Integral timber wingwalls. Backwall plank extends beyond bearing piles-no supplemental wingwall piles.							
		8903	WW-Deterioration		EA				4	
			CS3: Wingwall plank showing signs of incipient decay.							
		6000	Scour		EA					
			CS3: Erosion has undermined the ends of SW/NW/NE wingwall planks.							
	Protective Coatings: CS4: Timber preservative treatment ineffective.									

NBI Engineering Services
PO Box 188
Mount Horeb, WI 53572

Numbering convention increases from west to east or south to north.
Condition codes and methodology consistent with the Specifications for the National Bridge Inventory.

Pier(s)	235		**Substructure-Timber-Pile Cap Pier**	**2**	LF	150			30	120
			Timber Pile Cap - Timber pile bent pier.							
			TBR-Decay/ Section Loss/ Abrasion/ Wear		LF				30	**120**
		1140	Caps decayed and sound hollow throughout length with prominent horiz. and vert. checking/splitting throughout-more severe at ends. Visual assessments for elements above 6ft. CS3: Full depth split (<1/4") wide, +/- 50% decay. Piers: W2/W9. CS4: Full depth split (>1/4") wide, >50% decay. Piers: W1/W3/W4/W5/W7/W8. CS4: Bottom sill beam in Pier W6 decayed +/-90% and starting to crush under piles. (Pier W6 pile cap CS3).							
	Protective Coatings: CS4: Timber preservative treatment ineffective.									
	228		**Substructure-Timber-Pile-Pier**	**1**	EA	60			23	37
			Timber Piles - Timber pile bent pier.							
			TBR-Decay/ Section Loss/ Abrasion/ Wear		EA				23	**30**
		1140	[6] Bearing piles per pier. Visual assessments for elements above 6ft. CS3/CS4: Piles sound hollow with prominent vertical checking/splitting throughout. Pile shells soft/easily damaged. [24] Piles vertically split (1/4"-3"). Pier W7-Pile S5 starting to crush at top under cap. Multiple piles poorly aligned under caps (1"-6" offset)-tops of offset piles visible hollow and decayed +/-90%. Assume 50% of piles in CS4.							
		4000	Settlement		EA					
			No readily visible signs of settlement.							
		6000	Scour		EA					**7**
			CS4: Imminent failure of embankment at Pier W2 (6-Piles). Tapered driving tip of Pile S2 in Pier W7 exposed. *See Channel/Channel Protection descriptions for additional information.*							
	Protective Coatings: CS4: Timber preservative treatment ineffective.
