Project Description Summary

Lincoln County is requesting rehabilitation funding to address six problematic hills on the Harrison Hills trail system. These segments feature substantial elevation changes over short distances and are composed of native forest soils that are highly prone to erosion. Previous stabilization efforts, including broad-based dips, have not been successful. Currently, these areas pose significant safety risks due to steepness, blind corners, and water diversionary structures that create difficult-to-navigate obstacles. Our goal for this project is to reduce the trail slope by cutting material from hilltops and filling the bottom sections to create more gradual transitions. Additionally, we plan to: Ditch and crown the trail surface and back-slope where necessary; Remove "in-trail" obstacles; Install cross-drain culverts to improve water diversion; & Armor slopes with rock and gravel for long-term erosion control. Specifically, for Hill #5, we propose constructing a short bypass to eliminate a steep, blind "dog-leg" corner. This will effectively remove the hill and create a flat, straight stretch requiring minimal future maintenance. Gravel depth on hillsides will average 3-4 inches; however, depth may vary depending on overall need and existing available material.

I certify that all maintenance land use agreements are on file.

Estimated Cost

Maintenance	Acquisition	Insurance	Development	Bridge Rehab.	Trail Rehab.	Total Estimated Cost
					\$68,188.32	\$68,188.32
