Air Emissions Inventory (EI) – Revising Historical Air Emissions Inventory (EI) Data

July 2021

General

- When the EI data year is archived by DNR in December, the data become historical.

- Edits of historical EI data are very limited.

- Only process-level controlled emissions can be edited in historical data.

- Edits to historical data will not impact EI summary reports.

- Edits to historical data impact:

  - The [10-year trend reports](#) generated using the most recent ten years of historical EIs after the EI data year is archived in December.

  - Data requests fulfilled from revision date forward.

Revising EI historical data

1. For a process-level controlled emissions revision to be implemented, two conditions must be satisfied:

    a. The total facility level emissions for the pollutant must exceed the pollutant's reporting threshold before or after the change is made.

    b. The change in emissions must exceed 2% of the pollutant's reporting threshold.

Revising EI historical data

2. To revise EI historical data, email the facility ID, facility name, device ID, process ID, pollutant and new process-level controlled emissions to either the facility-assigned compliance engineer or DNRAMEmissionsInventory@wisconsin.gov.

For EI and Air Reporting Switchboard Help

- Contact the facility-assigned compliance engineer. On DNR's website, find the compliance engineer's contact information by using the [Air Permit Search Tool](#) to locate the facility and select the DNR Air Contacts tab.
