## **Executive Summary**

This document provides Wisconsin's 2015 transportation conformity budget forecasts as required for the Attainment State Implementation Plan (SIP) for the 2008 8-hour ozone National Ambient Air Quality Standard (NAAQS). The U.S. Environmental Protection Agency (EPA) requirements outlined in CFR 93.118(e) (4) stipulate that mobile source emission budgets for direct oxides of nitrogen ( $\text{NO}_x$ ) and volatile organic compounds (VOCs) be established as part of the 2008 8-hour ozone Attainment SIP. The motor vehicle emissions budgets are necessary to demonstrate that transportation plans and transportation improvement programs conform to the SIP. This document also includes 2011 base year inventories to demonstrate progress towards attaining the 2008 8-hour ozone NAAQS.

In the State of Wisconsin, there are only two ozone nonattainment areas: the whole of Sheboygan County and the eastern portion of Kenosha County. Effective July 20, 2012, EPA designated both of these areas as marginal nonattainment for the 2008 8-hour ozone NAAQS. The partial Kenosha County nonattainment area is essentially east of I-94, including the Village of Pleasant Prairie, the Town of Somers, and the City of Kenosha. As a marginal nonattainment area, the attainment date for the 2008 8-hour ozone NAAQS is December 31, 2015. This plan establishes a 2011 baseline emissions inventory for the whole of Sheboygan County and the eastern portion of Kenosha County for ozone precursors –  $\text{NO}_x$  and VOCs – and projects the emissions for these pollutants to the attainment year of 2015. This plan also establishes a motor vehicle emission budget for the proposed adjustment of the Sheboygan County nonattainment boundary. On June 27, 2013, the Wisconsin Department of Natural Resources (WDNR) asked EPA Region 5 to adjust the Sheboygan County nonattainment boundary to a narrow strip of land adjacent to Lake Michigan. WDNR supplemented this boundary refinement request with technical information on January 22, 2014. For these three areas, this plan demonstrates that emissions are decreasing over the 2011-2015 time period as a result of permanent and enforceable federal and state control requirements. Lastly, this plan establishes motor vehicle emissions budgets for  $\text{NO}_x$  and VOCs for the whole of Sheboygan County, the eastern portion of Kenosha County and the proposed adjusted Sheboygan nonattainment area. The new motor vehicle emissions budgets are summarized in the chart below:

*2015 Motor Vehicle Emissions Budgets for Wisconsin's Ozone Nonattainment Areas (Tons per Summer Day)*

<b>Area</b>	<b><math>\text{NO}_x</math></b>	<b>VOC</b>
Kenosha County (east of I-94)	4.40	1.99
Sheboygan County	4.44	1.97
Proposed Adjustment to Sheboygan County	2.89	1.19

The new motor vehicle emissions budgets established in this plan are intended to be used in regional transportation conformity determinations with the 2008 ozone NAAQS. Although the Sheboygan nonattainment area has approved motor vehicle emissions budgets that have been used under the previous ozone standard, new budgets are needed due to EPA's transition from an older on-road mobile emissions model (MOBILE6.2) to the current model (MOVES2014).

## **1. Background and Purpose**

### **1.1 National Ambient Air Quality Standard for Ozone**

Congress first enacted the Clean Air Act (CAA) in 1970. It was amended in 1990. The CAA requires the U.S. Environmental Protection Agency (EPA) to set National Ambient Air Quality Standards (NAAQS) for pollutants considered harmful to public health and the environment. There are two categories of NAAQS. The primary standards are designed to establish limits to protect public health, and the secondary standards are intended to protect against environmental and welfare effects such as decreased visibility, and damage to crops, animals, and buildings. Currently, there are six pollutants with established primary level NAAQS: carbon monoxide, lead, particulate matter, sulfur dioxide, nitrogen dioxide, and ozone. These pollutants are referred to as “criteria” pollutants. If an area is found to violate one of these standards, it is classified as a nonattainment area for that specific pollutant. The states and/or tribes responsible for the affected area must then develop and implement strategies and control measures to attain the NAAQS. The objective for designated nonattainment areas is to be reclassified to attainment by the EPA.

The 1-hour ozone NAAQS was established in 1979. Under this standard, the ozone threshold value was 120 parts per billion (ppb), measured as a 1-hour average concentration. An area met the ozone NAAQS if there were no more than three exceedances at any one monitor in the region in a three year period.

The CAA requires that the EPA carry out a periodic review of the NAAQS for the criteria pollutants. The EPA reviewed the 1-hour ozone NAAQS during the 1990s and determined that based on the latest health studies a new standard was necessary to ensure protection of public health. The updated standard of 80 ppb was finalized in July of 1997. The 1997 ozone standard is based on an 8-hour averaging period. A violation occurs when the three year average of the annual fourth highest daily maximum 8-hour ozone concentration is less than or equal to the NAAQS (a level of 85 ppb due to the rounding convention).

As a result of EPA’s next periodic review of the ozone NAAQS, the agency determined that the NAAQS did not adequately protect public health. EPA issued a new ozone standard in March, 2008 using the same 8-hour averaging methodology as the 1997 ozone standard, but lowered the standard from 80 ppb to 75 ppb.

### **1.2 Ozone and Its Formation**

Ozone is a reactive chemical compound. It is made up of three oxygen atoms and is defined by the chemical symbol O<sub>3</sub>. Ozone is a gas that occurs both in the Earth’s upper atmosphere and at

ground level. When it occurs naturally in the upper atmosphere, ozone acts as a shield from the sun's harmful ultraviolet rays. However, ozone that forms at ground level is a concern. Elevated ground-level ozone concentrations can be harmful to humans if breathed. Breathing ozone can trigger a variety of health problems including chest pain, coughing, throat irritation, and congestion. It can worsen bronchitis, emphysema, and asthma. Ground level ozone can reduce lung function and inflame the linings of the lung. Repeated exposure may permanently scar lung tissue.

Unlike most other pollutants, ozone is not directly emitted into the air by specific sources; rather ozone is formed by a photochemical reaction. This reaction occurs between NO<sub>x</sub> and VOCs in the presence of sunlight and elevated ambient temperatures. Because sunny, hot conditions are necessary, ground level ozone forms in much higher concentrations during the summer months. Ozone is commonly an urban air issue, but can also be transported to rural areas. NO<sub>x</sub> and VOC emissions from motor vehicles and stationary sources can be carried hundreds of miles from their origins, and contribute to high ozone concentrations over large, multi-state regions.

There are numerous sources of NO<sub>x</sub> and VOC pollutants including both anthropogenic and natural sources. Anthropogenic sources can be further broken down into four separate source categories: point sources, area sources, on-road mobile sources, and off-road mobile sources. Point sources include large permitted industries and power plants. Area sources are small, stationary, non-transportation sources that collectively as a group can contribute significantly to air pollution. Examples of area sources include gas stations, automotive shops and dry cleaners. The on-road mobile source category includes automobiles, trucks, and buses. The off-road mobile source category includes trains, ships, boats, airplanes, lawn equipment, and construction equipment. Natural sources, including biogenic releases from vegetation, lightning, soil, and decomposition, are not considered in this document due to the difficulties of quantifying and controlling them.

### **1.3 Description of Wisconsin's Nonattainment Areas**

EPA's final rule designating nonattainment areas and associated classifications for the 2008 ozone NAAQS was published in the Federal Register on May 21, 2012 (77 FR 30088). The entire state of Wisconsin was designated attainment/unclassifiable except a portion of Kenosha County and the complete Sheboygan County area, which were designated as marginal nonattainment areas. On June 27, 2013, the Wisconsin Department of Natural Resources (WDNR) asked EPA Region 5 to adjust the Sheboygan County nonattainment boundary to a narrow strip of land adjacent to Lake Michigan. WDNR supplemented this boundary refinement request with technical information on January 22, 2014. Figure 1 presents the map of the two designated nonattainment areas and the proposed adjusted nonattainment area for Sheboygan County.

#### Nonattainment Area Boundaries

- [Yellow square] Kenosha County: Partial
- [Green square] Sheboygan County: Whole
- [Red square] Sheboygan County: Proposed Partial

Ozone Nonattainment Areas in Wisconsin

Figure 1. Wisconsin Marginal Nonattainment Areas under the 2008 Ozone NAAQS.

Concurrent with the designation rule, EPA released an additional final rule that established attainment dates and revoked the 1997 ozone standard for transportation conformity purposes (77 FR 30160, May 21, 2012). This rule sets an attainment date of December 31, 2015 for the Kenosha and Sheboygan marginal nonattainment areas under the 2008 ozone standard.

#### **1.4 Transportation Conformity**

Transportation conformity is required under CAA section 176 (c) (42 U.S.C 7506(c)) to ensure that federally funded or approved highway and transit activities are consistent with (“conform to”) the purpose of the state air quality implementation plan (SIP). “Conform to” the purpose of the SIP means that transportation activities will not cause or contribute to new air quality violations, worsen existing violations, or delay timely attainment of the relevant NAAQS or any interim milestones. Transportation conformity applies to designated nonattainment and maintenance areas for transportation-related criteria pollutants: ozone, PM<sub>2.5</sub>, PM<sub>10</sub>, carbon monoxide, and nitrogen dioxide. EPA’s transportation conformity rule (40 CFR Parts 51 and 93) establishes the criteria and procedures for determining whether metropolitan transportation plans, metropolitan transportation improvement programs, federally supported highways projects, and federally supported transit projects conform to the SIP.

CAA section 176 (c)(6) and the conformity regulation at 40 CFR 93.102(d) provide a one year grace period from the effective date of designations before transportation conformity applies in areas newly designated nonattainment for specific NAAQS. Transportation conformity for the 2008 ozone NAAQS applies one year after the effective date of nonattainment designations for the standard, i.e., July 20, 2013. EPA’s final rule for determining area designations/ classifications under the 2008 ozone NAAQS also revoked the 1997 ozone NAAQS for transportation conformity purposes. The revocation is effective one year after the effective date of designations for the 2008 ozone standard (July 20, 2013). Therefore, transportation conformity for the 1997 ozone NAAQS is no longer required starting on that date. This revocation date also corresponds with the end of the one year conformity grace period for the planning process in ozone nonattainment and maintenance areas. EPA stated that no backsliding will result from the revocation for the purposes of transportation conformity, as areas designated nonattainment for the 2008 ozone NAAQS will be required to use any adequate or approved SIP motor vehicle emissions budgets for a prior ozone NAAQS when determining conformity for the 2008 ozone standard until budgets for the standard are either found adequate or are approved.

In 2014, EPA released the Motor Vehicle Emissions Simulator (MOVES) version 2014 (79 FR 194, October 7, 2014). With EPA’s official release of MOVES2014 they also granted a two year grace period for the requirement to use MOVES2014 in new regional emissions analyses and new hot-spot analyses for transportation conformity determinations.

MOVES2014 is the latest state-of-the-art upgrade to EPA's modeling tools for estimating emissions from cars, trucks, buses and motorcycles, based on the latest data and regulations.

The portion of Kenosha County (Wisconsin portion of the Chicago-Naperville, IL-IN-WI marginal ozone nonattainment area) currently demonstrates transportation conformity using the "Build No Greater than Baseline 2011 Emissions Test" (40 CFR 93.119). For the portion of Kenosha County east of I-94, VOCs cannot exceed 1.389 tons per hot summer day and NO<sub>x</sub> cannot exceed 3.622 tons per hot summer day. The Sheboygan marginal ozone nonattainment area currently demonstrates transportation conformity using motor vehicle emissions budgets calculated using the MOBILE6.2 emissions model. For Sheboygan County, VOCs cannot exceed 2.01 tons per hot summer day after 2012 and cannot exceed 1.32 tons per hot summer day after 2020. In addition, NO<sub>x</sub> cannot exceed 4.15 tons per hot summer day after 2012 and cannot exceed 1.79 tons per hot summer day after 2020. EPA's grace period for using the MOBILE6.2 model instead of the MOVES model to demonstrate conformity ended on March 2, 2013 (77 FR 11394, February 27, 2012). Because MOBILE 6.2 and MOVES2014 calculate emissions very differently, and emissions are generally higher using MOVES2014 (particularly NO<sub>x</sub> emissions), it would be difficult to demonstrate conformity in the Sheboygan analysis that compares MOVES2014 emissions to motor vehicle emission budgets based on MOBILE6.2.

## **1.5 The State of Wisconsin's 2015 Transportation Conformity Budgets for the Kenosha and Sheboygan Nonattainment Areas**

This plan establishes motor vehicle emission budgets to be used in regional transportation determinations for a portion of Kenosha County, the entire Sheboygan County, and a proposed adjustment to the Sheboygan County nonattainment area for the 2008 ozone NAAQS. Although the Sheboygan County nonattainment area has approved motor vehicle emissions budgets that have been used under the 1997 ozone standard, new budgets are needed due to EPA's transition from an older on-road mobile model source emissions model (MOBILE6.2) to the current model (MOVES2014).

The plan demonstrates progress towards attainment of the 2008 ozone NAAQS based on a comparison of ozone precursors (NO<sub>x</sub> and VOC) in the base year of 2011 and the attainment year of 2015. This analysis shows substantial reductions in emissions are expected to occur over the 2011-2015 time period in Wisconsin's nonattainment areas as a result of state and federal control requirements that are in place in the areas. The new NO<sub>x</sub> and VOC motor vehicle emissions budgets established in this plan are consistent with emission levels that provide for steady progress towards attainment of the 2008 ozone NAAQS.

## **2. Demonstration of Progress towards Attainment – Development and Comparison of Emissions Inventories for 2011 and 2015**

Progress towards attainment is demonstrated if projected emissions by the December 31, 2015 attainment date are significantly less than emissions in the 2011 base year. In order to meet this requirement, the WDNR has developed a 2011 base year comprehensive inventory for NO<sub>x</sub> and VOCs and projected the emissions inventory for these two pollutants to 2015 for the nonattainment areas under the 2008 ozone NAAQS (a portion of Kenosha County, the entire Sheboygan County, and the proposed adjustment to the Sheboygan County nonattainment area). Both the 2011 and 2015 emissions inventories include all point, area, on-road mobile, and off-road mobile source categories.

### **2.1 2011 Base Year Emissions**

This section provides a brief description of the methods used to develop the 2011 base year inventory as well as a summary of the emissions. More detailed documentation of the development of the emissions inventories for point, area, on-road mobile and off-road mobile categories are in the appendices.

Point source emissions for NO<sub>x</sub> and VOCs were compiled from Wisconsin's Air Reporting System (ARS) by using annually reported point source emissions for 2011. Area sources collectively represent individual sources of emissions that have not been inventoried as having specific point or mobile sources. These individual sources are treated collectively as nonpoint sources that are typically too small, numerous, or difficult to inventory using the methods for other classes of sources. On-road mobile source emissions were developed using MOVES2014. The key inputs used in the MOVES2014 model are as follows: vehicle age distributions based on registration data from the Wisconsin Department of Transportation (WisDOT), detailed transportation data (e.g., vehicle miles of travel [VMT] by vehicle class, road class and hour of day, and average speed distributions), and controls, including the Wisconsin Vehicle Inspection Program (WIVIP) and reformulated gasoline. The 2011 VMT data is summarized in Table 1 and Table 2. Off-road mobile source emissions other than emissions from aircraft, commercial marine engines, and locomotives were also estimated using the MOVES2014 model (20141021 version). This model was run for each month of 2011. Summer day estimates were obtained by dividing the emissions for the months of June, July and August by 92 (the number of days in the three months). Emission estimates for aircraft, commercial marine engines, and locomotives were obtained from the U.S. EPA's 2011 National Emissions Inventory (NEI), version 1, or U.S. EPA's 2011 Emissions Modeling Platform (Modeling Platform), version 6. For aircraft and locomotive emissions, the estimates in the NEI and Modeling Platform are equal. For commercial marine emissions, which all occur over Lake Michigan, the Modeling Platform has updated estimates that were provided by the Lake Michigan Air Directors Consortium

(LADCO). WDNR used these updated values, but allocated a portion of the total Lake Michigan emissions to the Kenosha and Sheboygan nonattainment areas based on the more detailed distributions of emissions in the NEI.

Table 1

*2011 Annual Vehicle Miles Traveled (VMT) for Wisconsin's Ozone Nonattainment Areas*

<b>Area</b>	<b>2011 Annual VMT</b>
Kenosha County (east of I-94)	907,935,808
Sheboygan County	957,303,020
Proposed Adjustment to Sheboygan County	559,736,039

Table 2

*2011 Summer Day Vehicle Miles Traveled (VMT) for Wisconsin's Ozone Nonattainment Areas*

<b>Area</b>	<b>2011 Summer Day VMT</b>
Kenosha County (east of I-94)	2,878,875
Sheboygan County	3,077,240
Proposed Adjustment to Sheboygan County	1,799,266

The 2011 emissions are in tons per hot summer day. In order to calculate the emissions in tons per summer day, The WDNR followed the methods summarized briefly in this section. The point source emissions inventory was created using annually reported point source emissions for 2011. Whenever feasible, federal, state and local controls were factored into the emission calculations. Emissions were estimated by collecting process-level information from each facility that qualifies for inclusion in the state's point source database. The WDNR is responsible for developing point source emissions inventories and maintaining the data. A table of detailed 2011 point source emissions is presented in Appendix A. The 2011 area source emissions inventory was created based on the Wisconsin 2011 base year emissions inventory submitted to the U.S. EPA in 2013. A table of 2011 area source emissions by county and source classification code (SCC) is located in Appendix B of this document. SCC is a process-level code that describes the equipment and/or operation that is emitting pollutants (40 CFR 51.50). For nonpoint and mobile sources, these codes comprise 10 digits. 2011 off-road mobile source emissions, other than aircraft, commercial marine engines and locomotives, were also estimated using the MOVES2014 model (20141021 version). This model was run for each month of 2011. Summer day estimates were obtained by dividing the emissions for the months of June, July and August by 92 (the number of days in the three months). For the commercial marine vessels, aircraft and locomotives (MAR) categories, annual emission estimates were obtained from U.S.

EPA's 2011 NEI or Modeling Platform and then summer day emissions were estimated by applying annual to summer day ratios for each of the three MAR categories provided in the LADCO modeling inventory for the year 2007. The other off-road and the on-road emissions reported in this document were estimated by the Motor Vehicle Emission Simulator (MOVES2014), the U.S. EPA's recommended on-road and off-road mobile source model. All estimates were made in accordance with the *MOVES2014 User Guide* (U.S. EPA, Office of Transportation and Air Quality, Assessment and Standards Division, July 2014, EPA 420-B-14-055) and *Using MOVES to Prepare Emission Inventories in State Implementation Plans and Transportation Conformity: Technical Guidance for MOVES2010, 2010a and 2010b* (U.S. EPA, Office of Transportation and Air Quality, Transportation and Climate Division, April 2012, EPA-420-B-12-028).

<b>Total</b>	<b>16.32</b>	<b>9.85</b>

## 2.2 Control Measures

To project emissions from 2011 to 2015, the WDNR relied on growth factors and control measures where applicable. The control assumptions are based on measures implemented after the 2011 base year and in place in Wisconsin's ozone nonattainment areas in 2015. This section describes the controls predicted for 2015; more information on the development of the 2015 inventory is available in section 2.3.

The main control measures that were relied upon in this document are the federal motor vehicle standards for on-road and off-road mobile sources, including EPA's heavy duty diesel engine standards, EPA's heavy duty engine and vehicle greenhouse gas (GHG) regulations, Tier 2 motor vehicle standards, and Tier 4 off-road engine standards. These control measures and continued phase out of older, higher polluting mobile sources are incorporated into the MOVES2014 model that were used to develop both the base and future year mobile source emissions inventories. In addition to federal motor vehicle standards, reformulated gasoline requirements in Kenosha County and the Wisconsin Vehicle Inspection Program (WIVIP) in Kenosha and Sheboygan Counties were included when developing both the base and future on-road mobile source inventories.

For most point sources, the growth rate between base year 2011 and 2015 remain even. However, the Edgewater Electrical Generating Unit, located in the Sheboygan nonattainment area, has not operated boiler #23 for almost two years. Alliant Energy, owner of the unit, intends to retire boiler #23 permanently before 2015. Alliant Energy also recently installed a selective catalyst reduction (SCR) system on boiler #25 for NO<sub>x</sub> control, as part of signed consent decree. According to the consent decree, the NO<sub>x</sub> emission limit for the entire source is 2,500 tpy until 2018, with a further reduction of 1,100 tpy starting in 2019.

It should be noted that the emissions projections included in this plan do not reflect the reductions expected from a range of measures being implemented to reduce NO<sub>x</sub> and VOC

emissions in the Wisconsin ozone nonattainment area. These measures have been funded through sources such as the following:

- U.S. EPA's Midwest Clean Diesel Initiative
- Congestion Mitigation and Air Quality Improvement (CMAQ) Program
- Diesel Emissions Reduction Act (DERA)
- Partners for Clean Air Activities
- Non-Motorized Bike Grant
- Various supplemental environmental projects

These projects include the installation of diesel oxidation catalysts on municipal vehicles, auxiliary power units for heavy duty trucks, traffic signal synchronization, and expanded transit services. These projects also include upgrading construction engines and locomotive engines to meet more stringent emissions standards. Many pedestrian and bike facility development and enhancements are providing an alternative to single occupancy vehicle (SOV) travel. It is anticipated that DERA and CMAQ funding will continue to support additional NO<sub>x</sub> and VOC emissions reduction projects in the near future, which will contribute to further progress towards attainment of the 2008 ozone NAAQS.

In addition, there are several other federal control measures that have been proposed or promulgated that are not accounted for in the plan but are expected to reduce the amount of NO<sub>x</sub> and VOC emissions in the Wisconsin nonattainment areas. The controls expected to have the greatest effect on NO<sub>x</sub> and VOC emissions in the Wisconsin ozone nonattainment areas include the National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters (Boiler MACT), mercury and air toxics standards for power plants (MATS), improved motor vehicle fuel efficiency standards, and the phase in of Tier 4 emission standards for off-road engines. The Boiler MACT and MATS were both written to address air pollutants, and will therefore lead to the greatest reductions in pollutants such as mercury, acid gases, and PM<sub>2.5</sub>. However, if owners of boilers and EGUs subject to these new rules decide to improve plant efficiency or switch to cleaner fuels for compliance strategies, co-benefits for NO<sub>x</sub> and VOC emissions are expected for these sources. The WDNR did not rely on any of these recently promulgated or proposed rules when developing the future year emissions inventory; however, the anticipated reductions from these new rules may also contribute to progress towards attainment of the 2008 ozone NAAQS for Wisconsin's nonattainment areas.

## **2.3 2015 Future Year Emissions**

This section describes the development of the 2015 future year emissions inventory. Unless otherwise noted below, the projected point and area source emissions in the Wisconsin nonattainment areas for 2015 were estimated using growth factors appropriate for each source

category. Tables 6, 7, and 8 summarize the ozone season day NO<sub>x</sub> and VOC emissions in Wisconsin's ozone nonattainment areas from all four source categories.

Table 6

*2015 NO<sub>x</sub> and VOC Emissions for Kenosha County (east of I-94) Ozone Nonattainment Area (Tons per Summer Day)*

<b>Source Category</b>	<b>NO<sub>x</sub></b>	<b>VOC</b>
Point Sources	8.80	0.70
Area Sources	1.09	4.72
On-Road Mobile Sources	4.40	1.99
Off-Road Mobile Sources	1.69	1.08

<b>Total</b>	<b>11.29</b>	<b>9.11</b>

### **2.3.1 2015 Point Source Emissions**

To forecast point source emissions from 2011 to 2015, WDNR used a “zero growth” projection that was recommended by U.S.EPA Region 5. However, specific reductions were made to the Edgewater Electrical Generating Unit in Sheboygan County, based on permit conditions. Table 9 shows the overall NO<sub>x</sub> and VOC emissions for point sources in Wisconsin’s ozone nonattainment areas.

Table 9

*2015 Point Source Emissions for Wisconsin’s Ozone Nonattainment Areas (Tons per Summer Day)*

<b>Area</b>	<b>NO<sub>x</sub></b>	<b>VOC</b>
Kenosha County (east of I-94)	8.80	0.70
Sheboygan County	6.15	2.63
Proposed Adjustment to Sheboygan County	6.01	2.35

### **2.3.2 2015 Area Source Emissions**

The 2015 area source emissions inventory was created by projecting the Wisconsin 2011 base year emissions inventory submitted to the U.S. EPA in 2014 for the National Emissions Inventory (NEI). The forecasting factors were primarily based on growth factors from the EGAS model. The “Default REMI 6.0 SCC Configuration” for EGAS was used. If growth factors were not available for a certain SCC, population based growth factors were derived from the Wisconsin Department of Administration’s Demographic Services Center population reports.

Table 10

*2015 Area Source Emissions for Wisconsin’s Ozone Nonattainment Areas (Tons per Summer Day)*

<b>Area</b>	<b>NO<sub>x</sub></b>	<b>VOC</b>
Kenosha County (east of I-94)	1.09	4.72
Sheboygan County	1.33	6.34
Proposed Adjustment to Sheboygan County	0.93	4.44

### **2.3.3 2015 On-Road Source Emissions**

On-road mobile source emissions for 2015 were developed using the MOVES2014 model. The transportation modeling inputs to MOVES2014 for the Kenosha nonattainment area are based on data provided by SEWRPC on July 17, 2014. The transportation modeling inputs to MOVES2014 for the Sheboygan areas are based on data provided by WisDOT on October 24, 2014. The forecast for the Kenosha County transportation emissions are predicated on the high economic growth rate with an added 7.5 percent emissions safety margin. The forecast for the Sheboygan County transportation emissions are predicated on the official growth rate with an added 15 percent emissions safety margin. More information about the development of the 2015 on-road emissions inventory can be found in Appendix C of this document.

Table 11

Sheboygan County	3,321,266
Proposed Adjustment to Sheboygan County	1,937,297

#### **2.3.4 2015 Off-Road Source Emissions**

Off-road mobile source emissions projections for 2015, other than aircraft, commercial marine engines, and locomotives, were developed using the MOVES2014 model. The MOVES2014 model includes control measures for federal controls that have been promulgated. Aircraft, commercial marine engine, and locomotive emissions were developed from EPA's 2018 modeling platform by interpolating the difference between the base year of 2011 and 2018 to determine attainment year emissions for 2015. Detailed information about the development of the 2015 off-road emission inventory can be found in Appendix D and Appendix E of this document.

Table 14

*2015 Off-Road Mobile Source Emissions for Wisconsin's Ozone Nonattainment Areas (Tons per Summer Day)*

<b>Area</b>	<b>NO<sub>x</sub></b>	<b>VOC</b>
Kenosha County (east of I-94)	1.69	1.08
Sheboygan County	2.76	2.33
Proposed Adjustment to Sheboygan County	1.46	1.13

#### **2.4 Emissions Comparison**

Tables 15, 16, and 17 provide a comparison of ozone season day emissions for the years 2011 and 2015. The table shows the differences by source category with the total changes in emissions for each pollutant listed. As shown in the tables, NO<sub>x</sub> and VOC emissions within the nonattainment areas are expected to decrease significantly between 2011 and 2015. These emission trends demonstrate that progress will be made towards attainment of the 2008 ozone NAAQS.

Table 15

### **3. Transportation Conformity and Motor Vehicle Emission Budgets**

This section establishes new NO<sub>x</sub> and VOC motor vehicle emissions budgets for the 2015 attainment year to be used for transportation conformity purposes in Wisconsin's nonattainment areas after EPA determines budget adequacy. The budgets are set based on the on-road mobile source emissions in 2015 and are consistent with an overall level of emissions that assures progress toward attainment of the 2008 ozone NAAQS. These budgets were developed using MOVES2014. Appendix C contains key data used to develop inputs to MOVES2014 to create these budgets. (The complete set of inputs to MOVES2014 is too lengthy to include in this document. However, electronic copies of the inputs can be obtained from WDNR by email at [christopher.bovee@wisconsin.gov](mailto:christopher.bovee@wisconsin.gov) or by phone at (608) 266-5542.)

For the Wisconsin 2008 ozone nonattainment areas, transportation conformity will be based on the submitted motor vehicle emission budgets after EPA determines that the budgets meet the adequacy criteria of the transportation conformity rule. Once these budgets are found adequate by EPA, they will replace the motor vehicle emissions budgets established for the redesignation and maintenance SIP for the 1997 ozone NAAQS. Table 18 identifies the 2015 motor vehicle emissions budgets for the Wisconsin 2008 ozone nonattainment areas for use in transportation conformity analyses.

Table 18

*2015 Motor Vehicle Emissions Budgets for Wisconsin's Ozone Nonattainment Areas (Tons per Summer Day)*

<b>Area</b>	<b>NO<sub>x</sub></b>	<b>VOC</b>
Kenosha County (east of I-94)	4.397	1.994
Sheboygan County	4.435	1.972
Proposed Adjustment to Sheboygan County	2.886	1.189

### **4. Public Participation**

In accordance with section 110(a) (2) of the CAA, the WDNR is required to hold a public hearing prior to the adoption of this plan and subsequent submittal to the EPA. The Department will notify the public and other interested parties of an upcoming public hearing and public comment period 14 days prior to holding the hearing as follows:

- Notice of availability of the 2015 Motor Vehicle Emission Budgets for Transportation Conformity was posted on the Wisconsin Department of Natural Resources Air Management website on December 10, 2014:

<http://dnr.wi.gov/topic/AirQuality/Pollutants.html>

- The public hearing was scheduled for December 23, 2014 beginning at 1:30p.m. at the Wisconsin Department of Natural Resources Building, Conference Room 713, 101 South Webster Street, Madison, WI 53707
- The public comment period for the plan opened when it was posted on the Wisconsin Department of Natural Resources Air Management website on December 10, 2014, and closes on January 9, 2015, nineteen days after the public hearing.

## **Conclusion**

This plan demonstrates progress towards attainment of the 2008 ozone NAAQS for Wisconsin's nonattainment areas. As shown in Tables 15, 16, and 17, the NO<sub>x</sub> and VOC emissions reductions from 2011 to 2015 for Wisconsin's nonattainment areas range from 7 percent to 31 percent. These emission reductions were based on control measures that are permanent and enforceable and will continue to improve air quality in the region. Additionally, this plan establishes motor vehicle emission budgets for NO<sub>x</sub> and VOC in the year 2015 that can be used in Wisconsin's nonattainment areas for regional transportation conformity determinations once the budgets are found adequate by EPA.

- (1) Cities of Plymouth, Sheboygan and Sheboygan Falls excluded
- (2) Obtained from USEPA 2011 Modeling Platform, ver. 6. See: [ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/point\\_by\\_state/](ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/point_by_state/)
- (3) Allocation based on surface water area (145 sq. km. for county and 117 sq. km., 81%, for proposed nonattainment area, from the NMIM2009 files WI\_WIB.ALO and WI\_WOB.ALO).
- (4) Two major rail routes traverse the length of Sheboygan County, one in the proposed sub-county nonattainment area and the other not in that area.

Table D-3

*Kenosha Sub-County Nonattainment Area (I-94 and to the East) 2015 NO<sub>x</sub> Emissions: tons per year (tpy) and tons per summer day (tpsd)*

- (1) Cities of Plymouth, Sheboygan and Sheboygan Falls excluded
- (2) Obtained from USEPA 2011 Modeling Platform, ver. 6. See: [ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/point\\_by\\_state/](ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/point_by_state/)
- (3) Allocation based on surface water area (145 sq. km. for county and 117 sq. km., 81%, for proposed nonattainment area, from the NMIM2009 files WI\_WIB.ALO and WI\_WOB.ALO).
- (4) Two major rail routes traverse the length of Sheboygan County, one in the proposed sub-county nonattainment area and the other not in that area.

- (1) Cities of Plymouth, Sheboygan and Sheboygan Falls excluded
- (2) Obtained from USEPA 2011 Modeling Platform, ver. 6. See: [ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/point\\_by\\_state/](ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/point_by_state/)
- (3) Allocation based on surface water area (145 sq. km. for county and 117 sq. km., 81%, for proposed nonattainment area, from the NMIM2009 files WI\_WIB.ALO and WI\_WOB.ALO).
- (4) Two major rail routes traverse the length of Sheboygan County, one in the proposed sub-county nonattainment area and the other not in that area.

## Appendix E: 2011 and 2015 Aircraft, Commercial Marine Vessels and Locomotives Emissions

WDNR interpolated between base year 2011 and 2018 to derive emission projections for the attainment year 2015.

The link to the USEPA 2011 aircraft emissions is [ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/point\\_by\\_state/](ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/point_by_state/)

From there one should click on: WI\_point\_2011.zip, and then open the file WI\_2011NEIv1\_POINT\_20130723\_revised\_ptnonipm\_15aug2013\_v3.csv

The links to the USEPA 2011 commercial marine emissions are <http://www.epa.gov/ttnchie1/net/2011inventory.html> (2011 NEI) and [ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/nonpoint\\_by\\_state/](ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/nonpoint_by_state/) (2011 Modeling Platform; which presents updated emission estimates provided by LADCO)

From the modeling platform link, one should click on:

- WI\_nonpoint2011.zip, and then open the file: WI\_2010LADCO\_CMV\_19sep2013\_v1.csv
- IL\_nonpoint2011.zip, and then open the file: IL\_2010LADCO\_CMV\_19sep2013\_v1.csv
- IN\_nonpoint2011.zip, and then open the file: IN\_2010LADCO\_CMV\_19sep2013\_v1.csv

- MI\_nonpoint2011.zip, and then open the file: MI\_2010LADCO\_CMV\_19sep2013\_v1.csv

From both the 2011 NEI webpage and from these four modeling platform files, WDNR obtained commercial marine emissions for the 33 counties adjacent to Lake Michigan, which are:

- Wisconsin (10): Brown, Door, Kenosha, Kewaunee, Manitowoc, Marinette, Milwaukee, Ozaukee, Racine and Sheboygan
- Illinois (2): Cook and Lake
- Indiana (3): Lake, LaPorte and Porter, and
- Michigan (18): Allegan, Antrim, Barrien, Benzie, Charlevoix, Delta, Emmet, Grand Traverse, Leelanau, Mackinaw, Manistee, Mason, Memominee, Muskegon, Oceana, Ottawa, Schoolcraft and Van Buren

WDNR used data from both the 2011 NEI and the 2011 Modeling Platform to estimate commercial marine emissions, because each of these data sources has advantages over the other: the NEI has data for each of the 33 counties, while the Modeling Platform has the updated LADCO emission estimates. However, the total emissions over Lake Michigan in the Modeling Platform are only allocated to a subset of the 33 counties. Thus, to obtain the emissions estimates for Kenosha and Sheboygan Counties, the WDNR allocated the total emissions over Lake Michigan from the Modeling Platform to Kenosha and Sheboygan Counties based on the percentage of total Lake Michigan commercial marine emissions for those two counties in the 2011 NEI.

The link for the 2011 locomotive emissions is: [ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/nonpoint\\_by\\_state/](ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2011emissions/nonpoint_by_state/)

From there one should click on: WI\_nonpoint\_2011.zip, and then open the file WI\_rail\_2011NEIv1\_nonpoint\_20130911\_20sep2013\_v1.csv

The link to the USEPA 2018 aircraft emissions is [ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2018emissions/point\\_by\\_state/](ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2018emissions/point_by_state/)

From there one should click on: WI\_point\_2018.zip, and then open the file

WI\_2018ed\_from\_no\_ethanol\_2011NEIv1\_POINT\_20130723\_revised\_ptnonipm\_05dec2013\_v0

The link to the USEPA 2018 commercial marine and locomotive emissions and growth factors is

[ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2018emissions/nonpoint\\_by\\_state/](ftp://ftp.epa.gov/EmisInventory/2011v6/v1platform/2018emissions/nonpoint_by_state/)

From there one should click on: WI\_nonpoint\_2018.zip, and then open the file WI\_c1c2rail\_noCALIF\_2018ed\_06dec2013\_v0

The annual to summer day conversion factors were developed using LADCO inventory data at <http://www.ladco.org/tech/emis/current/index.php>
