

## ISSUE: Material Characterization

---

Within the current regulatory framework, clarify material requirements across all applicable programs.

- Unrestricted
- Relocated with restrictions
- Landfill disposal required

1. Identify potential receiving sites
  - Vacant Lot
  - Under building
  - Roadway
  - Utility Backfill
  - Non-metallic mine
2. Identify controlling factors for each potential receiving site
  - Material type
  - Contaminant limits/volume
  - Sampling requirements
  - Placement requirements
  - Regulatory approval/reporting
  - Tracking
  - Liability
  - Future land use control
  - Special considerations
3. Within the matrix created by 1 and 2 consider specifically contaminant limits and sampling (frequency, parameters, methods)
4. Discuss specific issues related to non-metallic mine locations
