

Risk and liability within the workflow

- Obligations to sample when the site is not recognized as a cleanup site?
 - Regulatory authority to require testing
 - Process and criteria for sampling requirements based on known information from pre-work research – consider reporting requirements, construction schedules, practical limits on pre-construction due diligence.
 - Accounting for the presence of asphalt
- Options for placement when contaminated material is encountered
 - Process and criteria for determining what placement options are acceptable
 - Tracking
 - Reporting
- Stopping work
 - Process/method – defining workflow
 - Regulatory authority – notification requirements
 - Threshold
- GIS Tracking
 - Evaluate practical implementation methods/limitations
 - Evidence for need (DOT records example, phantom contamination, etc.)
