Subject: RE: Badger Minerals - Disturbance Estimate

Good Afternoon Eric,

Thank you for putting together a summary that outlines the total land disturbance and anticipated erosion control practices associated with the current phase of Badger's project. Based on the current scope and disturbance area, a stormwater permit would not be required.

If the project scope changes or site conditions warrant a change which will result in greater than one acre of land disturbance, please contact me as soon as possible so you can be directed to appropriate permits.

Sincerely,
Melissa

We are committed to service excellence.

Subject: Badger Minerals - Disturbance Estimate

Hello Melissa,

I hope this email finds you well. I apologize for the delay in getting back to you after our conversation some time ago but the pace of life has slowed a bit during the health crisis.

Since our last conversation, Badger Minerals has put together a more detailed estimate of the planned disturbances for our exploration drilling project in Schoepke township. Taking into consideration your comments, as well as slightly modifying our drilling plans, we have estimated that the total disturbance is approximately 0.8 acres which would not require a construction site permit. My understanding is that the project would then be required to conform with the performance standards for non-permitted sites (NR 151.105).

I have attached a document detailing our estimates and drill plan modifications as well as discussion regarding the companies planned implementation of BMPs during the project.

Please review the information and let me know if you have any questions or would like to discuss further. I can be reached at my cell number below.

Kind Regards,

Eric Quigley
