Length Width Height/Depth	DEG MIN SEC	DEG MIN SEC
	45 31 43.8900	-89 7 11.5500

Detailed Project Description & Purpose (use attachments if needed)

Water withdrawal activities are proposed to take place at the indicated location between May-July of 2020.

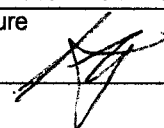

Water will be pumped into a water truck (1000 gallon capacity). A 2" rubber hose with a suction screen will be lowered below the water surface and pumped into the water truck with a 2-3" trash pump. The water truck, along with the pump will remain, at all times, on the shoulder of Meister Stockley Road to minimize disturbance and prevent sediment from entering the water way. A silt sock will be utilized along the down slope edge of the roadway as an additional measure to reduce sediment from entering the waterway.

Water will be collected from Stockley Creek (see attached figure 1 "Southern Water Source") at a maximum rate of ~12,000 gallons/day for use as a drilling fluid. Throughout the drilling process water is collected periodically on an as needed basis.

Materials to be used	Equipment to be used	Installation Date
	2" hose w/ suction screen, 2-3" trash pump	☐ Permanent ☒ Seasonal

Certification and Consent

As the property owner, I hereby give the Department consent to enter and inspect the site, and understand that the Department may visit the site and will make a determination within 15 days. If not the property owner, I understand that the Department cannot access the property without permission, and is not required to complete the determination within 15 days.
