

Project Brief:

- This developing project will combine information on waste sites, cleanup activities, and residential property transactions to examine whether environmental disamenities associated with these sites are reflected in housing prices.
- The analysis will also assess how cleanup timing may affect these impacts.
- The project is intended to provide economic information relevant to site prioritization and environmental management decisions.

Project Title:

Economic Impacts of Closed and Abandoned Waste Sites in Wisconsin

Project Goal:

Estimate how closed, abandoned, or improperly managed waste sites affect nearby communities and residential property values.
