Cutting Prescription:

Stand 4140-47: Salvage Clear-cut Area:
- Cut all trees greater than 1-inch diameter.

Stand 4140-44: Reserve Patch Area:
- Using groups of mostly undamaged, healthy timber, designate approximately five reserve patches in this area. At a minimum these patches should be 75 feet wide, while not exceeding ½ acre in size. Create reserve patches around dominant white pine, red oak, and red pine. Operators should make every effort not to enter these areas with equipment.
- Outside of reserve patch area, cut all trees greater than 1-inch diameter.

Stands 4140-47 & 4140-50 Partial Salvage Area:
- In areas of heaviest blow down larger than ½ acre and where few trees remain undamaged, cut all deciduous stems 1” and larger. These areas will serve as regeneration patches and should not be expanded into areas of undamaged trees.
- In all other areas, remove only those trees that are bent, broken, leaning or down. Stay out of unimpacted areas, and areas containing larger amounts of pine/oak regeneration.

Leave Tree Priority:
- Reserve all snags and live den trees unless they pose a safety concern. A maximum of 10 snags per acre is desired. If there is a shortage of existing snags, try to leave scattered aspen or other short-lived species to provide cavity trees and forage areas for wildlife and for future snag development.

Boundaries: No paint lines or markings are associated with this sale. Digital boundaries are provided by the DNR for use with Avenza app on smartphones; GIS files are also available for loading into processor computer systems. Purchaser is responsible for ensuring Purchaser Representative, Field Representatives, and equipment operators are equipped with the appropriate means to follow digital boundaries. Operations without the appropriate means to follow digital boundaries may be approved only by written agreement.

</tbody>
</table>

*Mixed Hardwood is estimated to be 70% maple and 30% white birch.
**Mixed Conifer is estimated to be 80% White Pine and 20% balsam fir and spruce.

Volume estimates for this sale were made using historic data from similar stands in close proximity of the sale. No data was collected from within the timber sale due to safety concerns. The estimated volume was adjusted to reflect the anticipated loss of volume due to the time lost for operations on this sale.

This sale is in urgent need of harvesting. It is recommended that the Purchaser begin harvesting this sale as soon as possible to minimize volume loss. In order to facilitate the harvest of high-risk timber on this sale, Contract Term Adjustment may be considered for green sales the Purchaser may hold on the Chequamegon-Nicolet National Forest, or any salvage sales they may hold with the Wisconsin Department of Natural Resources. A showing of impact on these sales is a prerequisite to granting a Contract Term Adjustment. The number of days granted shall be determined on a case-by-case review and shall reflect the time lost for operations on this sale.
Sale Conditions:
- Mill Scale Sale.
- No bid bond required.
- A performance bond of 15% of the total sale bid value or $1,000.00, whichever is greater, will be required.
- The cutting area is approximately 172 acres.
- The contract period is 2 years.
- Digital boundaries are provided by the DNR for use with Avenza app on smartphones; GIS files are also available for loading into processor computer systems. Purchaser is responsible for ensuring Purchaser Representative, Field Representatives, and equipment operators are equipped with the appropriate means to follow digital boundaries. Operations without the appropriate means to follow digital boundaries may be approved only by written agreement.
- Do not harvest trees, drop slash, or operate equipment across sale boundaries.
- No cutting or skidding in reserve areas.
- Damage to any residual trees will not be tolerated.
- Leave all standing snag and den trees that do not pose a safety hazard uncut.
- Utilization will be to a 4" top.
- All slash shall be lopped and scattered as it lies within 2' of the ground.

Cutting Prescription:

Stand 4140-44: Salvage Clearcut with Reserve Patches:
Cut all trees greater than 1-inch diameter, except within designated reserve patch area shown on sale map. Outside of reserve patches, all non-merchantable stems 1-5" must be severed by the logging contractor.

Reserve Patch Area:
- Using groups of mostly undamaged, healthy timber, designate approximately five reserve patches in this area. At a minimum these patches should be 75 feet wide, while not exceeding ½ acre in size. Focus on creating reserve patches around dominant white pine, red oak, and red pine. Operators should make every effort not to enter these areas with equipment.

Stands 4140-47 & 4140-50 Partial Salvage
In areas of heaviest blowdown larger than ½ acre and where few trees remain undamaged, cut all deciduous stems 1” and larger. These areas will serve as regeneration patches and should not be expanded into areas of undamaged trees.

In all other areas, remove only those trees that are bent, broken, leaning or down. Stay out of unimpacted areas, and areas containing larger amounts of pine/oak regeneration.

Leave Tree Priority:
- Reserve all snags and live den trees unless they pose a safety concern. A maximum of 10 snags per acre is desired. If there is a shortage of existing snags, try to leave scattered aspen or other short-lived species to provide cavity trees and forage areas for wildlife and for future snag development.

Boundaries:
No paint lines or markings are associated with this sale. Digital boundaries are provided by the DNR for use with Avenza app on smartphones; GIS files are also available for loading into processor computer systems. Purchaser is responsible for ensuring Purchaser Representative, Field Representatives, and equipment operators are equipped with the appropriate means to follow digital boundaries. Operations without the appropriate means to follow digital boundaries may be approved only by written agreement.
Special Conditions:

- **NO SALE MAY BEGIN WITHOUT PRIOR NOTIFICATION AND AN ON-SITE MEETING WITH A WISCONSIN DNR SALE ADMINISTRATOR.**
- To allow for better visibility and safety during harvest operations, construct 100-200-foot temporary landings at specified locations along town roads, given the specified location has been approved beforehand by the associated DNR Forester. The Forester must be contacted at least 48 hours prior to construction of a landing, road, or access.
- Purchaser required to post signs on USFS roads alerting recreationalists of logging activities.
- Equipment must be cleaned before entering and leaving sale area to prevent the introduction/spread of invasive species.
- All pine products cut between May 1 and September 1 must be removed from the sale area within three weeks from time of cutting. Pine products cut during the remainder of the year must be removed prior to May 1 of each year.
- The harvesting of any portion of a tree that lies outside the physical ownership of the Forest Service will not be allowed. Trees lying across the property line must be bucked at the ownership line and all portions of the tree that reside on the private side of the line must be left in place. Conversely, the remaining portion of the tree that lies within the physical ownership of the Forest Service may be harvested and utilized.
- At the discretion of the DNR Timber Sale Administrator, only on USFS system roads and trails, hauling is prohibited on the ATV/Snowmobile Trails on, weekends starting noon on Friday, through midnight Sunday, Federal Holidays, and between Christmas Day and New Year’s Day. At all times during the snowmobile season, keep at least 4” of packed snow on the trail. Keep trail clearing (10’ from the edge of the trail) cleared of debris resulting from purchaser’s operations as work progresses. Do not deck wood on inside curves, where it could obscure oncoming traffic.
- Chequamegon-Nicolet Forest Plan requires that all native surfaced approaches to paved or graveled roads have 100 ft. of gravel, 6 in. deep, 12 ft. wide put down when used during non-frozen conditions.
- The location and clearing widths of all Temporary Roads shall be agreed to in writing before construction is started. “Temporary Roads” are roads other than Specified Roads that are constructed by Purchaser for the purpose of harvesting included timber.
- When two or more commercial users are simultaneously using the same road, the commercial users will develop maintenance responsibilities and arrangements for accomplishing the work. Seller must agree to this plan. If the commercial users cannot agree on maintenance responsibilities, seller shall resolve the differences.
- The following roads will be decommissioned after use and closed with a berm. Berms must be constructed at designated locations by DNR Sale Administrator and shall be created using the following design features: Berms must be at least four feet in height and must be made with dirt mixed with rocks, stumps, logs, root-wads, or slash and shall be created without creating a defined trench.
  - Roads 944136, 944137, 944138, 944139, 944144, 944145, 944151

Road Restrictions List

1. Used only during surface firm or frozen conditions

- **Roads 944136, 944137, 944138, 944139, 944144, 944145, 944151**
Road Maintenance Requirements Summary

Purchaser shall maintain roads, commensurate with Purchaser’s use. Roads must be left in as good or better condition than existed prior to harvest. Performance of road maintenance work by Purchaser may be required prior to, during, or after each period of use. The timing of work accomplishment shall be based on Purchaser’s operating schedule and road conditions. Specific required road maintenance specifications are included below.

Purchaser shall maintain roads in accordance with the following Contract Road Maintenance Requirements Summary:

Specification No.     Specification Title
T-8110               Maintenance Blading/Grading
T-8420               Cutting Roadway Vegetation
T-8130               Spot Surface Course Placement/Replenishment
T-8110: Maintenance Blading/Grading is keeping an aggregate surfaced Roadbed in a condition to facilitate traffic and provide proper drainage. It includes maintaining the Crown, Inslope or Outslope of the Traveled Way, Turnouts, and Shoulder; repairing Berms; blending approach road intersections; and cleaning Drainage Dips and Lead-off Ditches.

T-8420: This work includes removal of brush, trees and other vegetative growth from within the clearing limits. This may include brush mowing of shoulders to prevent larger growth which would inhibit travel in the future.

T-8130: This work includes subgrade preparation, furnishing, hauling, spreading, and shaping materials in accordance with USFS requirements. Only commercial sources of aggregate will be accepted, except surfacing material may also be purchased from the government, where available, by filling out a form, 2600, paying the required fees, and obtaining a permit.
