Unit 2- (18ac) Harvest all trees marked with orange paint on the stem & the stump. Additionally, all aspen, ash and balsam are designated for harvest.

Operational Considerations-

- MX Hardwood volumes include 20T ash pulp, 10T basswood pulp & 1MBF basswood.
- Due to the occurrence of oak wilt, all harvesting activities are prohibited in areas managed for oak from April 1 to July 15th. These dates may be adjusted by the timber sale administrator.
- Between May 1 and September 15, all cut conifer products must be removed from the sale area within two weeks after being cut.
- No harvesting during the traditional nine day deer gun season.
- Heterobasidion Root Disease (HRD) – The Purchaser shall purchase and apply an approved fungicide (Rotstop C or Cellu-Treat) to all cut pine stumps and horizontal wound surfaces as is noted in the timber sale contract.
- Pre-harvest meeting on site prior to any snowfall and prior to any equipment moving in. No equipment allowed on site prior to discussion/meeting with timber sale administrator on such matter. **No exceptions.**
- All products harvested to a 6” minimum top.

- Off-road logging equipment shall be free of concentrations of plant material and soil prior to entering the sale area. - The locations, building, and maintenance of new landings, roads, and accesses are the full responsibility of the purchaser and are always subject to advance approval and under the conditions of the timber sale administrator who must be contacted at least 48 hours prior to construction of a landing, road, or access.
- Roads, skid trails and landings shall be graded and leveled or closed out to the satisfaction of the Seller upon completion of timber sales. Any accesses developed across ditches or other drainage features will be restored to their original condition.
- Existing skid trails must be kept free of debris and ruts. They must be left in good condition for vehicle traffic at all times. All trails must be repaired to pre-harvest conditions during mid-contract “pull-off” or end of sale.
- Rutting will be monitored and if soil disturbances become excessive (based on established thresholds defined in contract), harvesting operations may be suspended until the affected areas are repaired properly.
- No full tree length skidding will be allowed. All products to be removed on a forwarder, no ground skidding will be allowed. All cut stringers must be utilized.
- Do not cut standing dead trees unless they pose an operational hazard.
- Follow Wisconsin BMP’s for water quality at all times. Avoid wetlands as much as possible and only operate within them during very dry times with timber matting or under frozen ground conditions. Some areas of this sale will likely require frozen ground conditions due to access across wetlands. WI DNR may have some timber mats available to use.
- Mixed Hardwood consists of ash, basswood, cherry, elm, ironwood & red maple.
