Sugar Maple	Logs	MBF	9
Red Oak	Logs	MBF	4
¹ Mixed Hardwood pulp Volume is ~5% basswood			

Sale method: Scale (ticket system)
Contract length: Three years
Minimum advertised value: \$13,371.50

Cutting Specifications

Selection/Thinning/Shelterwood harvest - 40 acres, cut all orange marked trees plus all merchantable ash, aspen, ironwood, musclewood and balsam fir. Retain all other conifers.

Aspen Regeneration harvest - 4 acres, cut all stems >2" DBH except oak but harvest orange marked oak. Retain all conifers except balsam fir.

Operational Considerations-

- Timber operations must occur during dry, firm or frozen soil conditions. No harvesting between April 15th and July 15th of each calendar year per oak wilt guidelines. With various drainages and wet areas occurring in the northern hardwood area, summer chance logging would be unlikely but will still be offered. All other parts of sale are dry, firm and frozen ground only. DNR forester will determine operability.
- Road building – any road building has to have prior approval
- Access will be from Forest Drive for the southern unit will involve potential partial use of county snowmobile trail. The trail intersects a small portion in the far SW corner of the sale and is the main ingress/egress access from Forest Dr. Signage will be placed during active logging operations warning of active logging operations. Northern access will be at parking area just west of the river. Landing area will be needed to be expanded slightly to accommodate wood product piles.
- BMP requirements – no equipment allowed past red line.
- Slash shall be not be piled higher than 36" and evenly dispersed throughout sale area only.
