C161H – Stand 8 (144 Acres): This stand is comprised of five separate stands of 109-year old large sawlog red oak. There are red and white pine scattered in portions of this stand. The stand underwent an initial shelterwood harvest in 2013. This sale is to be an overstory harvest. Prior to harvest the north three stands will undergo a prescribed burn to setback the competing maple understorey and encourage the growth of red oak seedlings. The south two stands have an established understorey of red oak, white pine and white birch to a lesser degree. Five to ten mature red oak per acre will remain after the timber sale.
