Management Area 6: Oneida Sandy Plains - Forest Production

Stand 8 (17 Acres) is comprised of medium stocking white pine small sawtimber. The stand originated in 1921. The stand will have an intermediate thinning to reduce competition and maintain the overall growth and vigor of the remaining stems.

Stand 14 (60 Acres) is comprised of a medium stocking of red oak small sawtimber with a small component of pole sized northern hardwoods. The stand originated in 1919 and was last thinned in 2006. Stand 14 will undergo a first stage shelterwood harvest to encourage the development of red oak regeneration.
