- ▨ Lakes

C90H Stand 2 (28 acres) is a 94-year-old natural stand of red and white pine with a mix of other species, including birch and red maple. This stand will be thinned, and most short-lived species will be cut.

C91H Stand 1 (194 acres) is a 105-year-old natural stand of red and white pine with a mix of other species, including birch and red maple. This stand will be thinned, and most short-lived species will be cut.

C91H Stand 21 (6 acres) is a 33-year-old red pine plantation that is ready for a first thinning. Every third row will be cut to improve stand health and to improve equipment access for future thinnings.

The snowmobile trail will be posted if cutting occurs near the trail in winter. Aesthetics along the roads and trails should be minimized with an ample amount of pine residual throughout most areas.
