Stand 1 (204 acres) is a 105-year-old natural stand of white pine with a mix of other species, including spruce, aspen, and red maple. This stand will be thinned, and most short-lived species will be cut.

Stand 2 (97 acres) is a 92-year-old stand of northern hardwoods with a mix of other species, including hemlock, spruce, aspen, and red maple. This stand will be thinned, and most short-lived species will be cut to release abundant hemlock advanced regeneration.

Stand 3 (106 acres) is a 69-year-old natural stand of red and white pine with a mix of other species, including spruce, red maple, and aspen. This stand will be thinned, and most short-lived species will be cut.

The snowmobile trail will be posted if cutting occurs near the trail in winter. Aesthetics along the roads and trails should be minimized with an ample amount of pine residual throughout most areas.
