**Stand 1 (28 acres) is a 39-year-old red pine plantation that is ready for a first thinning. Every third row will be cut to improve stand health and to improve equipment access for future thinnings.**

**Stand 6 (19 acres) is a 65-year-old aspen stand. A coppice with standards regeneration harvest will be conducted to maintain aspen on the landscape.**

**Access is limited to a forestry road from the southeast through private property. It is not clear whether there is an easement in place. Contact should be made with landowners prior to sale establishment if easement documentation has not been found.**
