Stand 35-1 (12 acres) is listed as a 59-year old white pine plantation. There is a considerable amount of aspen mixed in with the white pine and also some 1 to 5 inch spruce in the understory that was probably underplanted. The management objective is to develop the white pine by thinning out dense patches where they occur and by removing all merchantable aspen.

Stand 35-3 (192 acres) is a 47-year old aspen stand that will be regenerated by removing most of the trees, while still following green tree retention guidelines.

Stands 35-4 and 35-10 (105 acres) are oak/northern hardwood stands that will be managed toward a more all-aged northern hardwood distribution through single tree selection. Seasonal restrictions will be implemented in these stands both for oak wilt as well as recreational considerations for the adjacent American Legion Camp cabins.

Biomass harvesting in the aspen stand is allowed.
