boundary of any property this map depicts.

Legend

- Section Corner
- Keg/Swamp
- Powerline
- Blacktop Bicycle Trail
- Woods Road
- Highways and Town Roads
- Lakes
- Aspen Coppice
- Pine/Hardwood Overstory Removal
- Pine Thinning
- Pine/Oak Shelterwood
- Campground Thinning

All stands lie within Mgmt. Area 3:
Vilas Sandy Plains North -
Forest Production

C223H - Stand 2 (75 acres) is a 55-year-old aspen stand that is ready to be regenerated. A coppice with standards regeneration harvest will be conducted to maintain aspen on the landscape.

C223H - Stand 3 (24 acres) is a 135-year-old pine and hardwood stand that received a thinning in 2010. The prescription will be an overstory removal with standards to release the abundant advanced regeneration.

C223H - Stand 6 (47 acres) is a 118-year-old large-sawlog pine and small-sawlog oak stand that will receive a shelterwood cut to promote pine and oak regeneration.

C223H - Stand 7 (41 acres) is the area surrounding Big Lake Campground. The stand will receive a free thinning to reduce potential hazard trees near campsites and promote tree health and aesthetics. Harvest operations restricted to winter only.

C223H - Stand 8 (3 acres) is a 70-year-old red pine plantation that is scheduled for a second thinning. The prescription will be a free thinning to reduce stocking levels and promote the growth and vigor of remaining crop trees

C223H - Stand 9 (19 acres) is a 106-year-old white pine stand that is scheduled for a thinning. The prescription will be the same as 223-8.

C228H - Stand 4 (24 acres) is a 77-year-old red pine plantation that is ready for a thinning. The prescription will be the same as 223-8. The stand is adjacent to the Manitowish Waters paved bike trail and North Lakeland School. Special care will be taken to maintain aesthetic quality.

Note: No nighttime harvest operations during summer months due to nearby campground on Big Lake. This area is not suitable for biomass harvesting.
