

Northern Highland - American Legion State Forest
C149H Stands 1, 2, 6, 10, 11
Trout Lake HQ - 98 Acres
Town of Boulder Junction
T41N R6E Sec 5, 7, 8

NHAL Master Plan: Area 3 - Vilas Sandy Plains North - Forest Production
Area 18 - Trout Lake Forestry Headquarters - Special Management

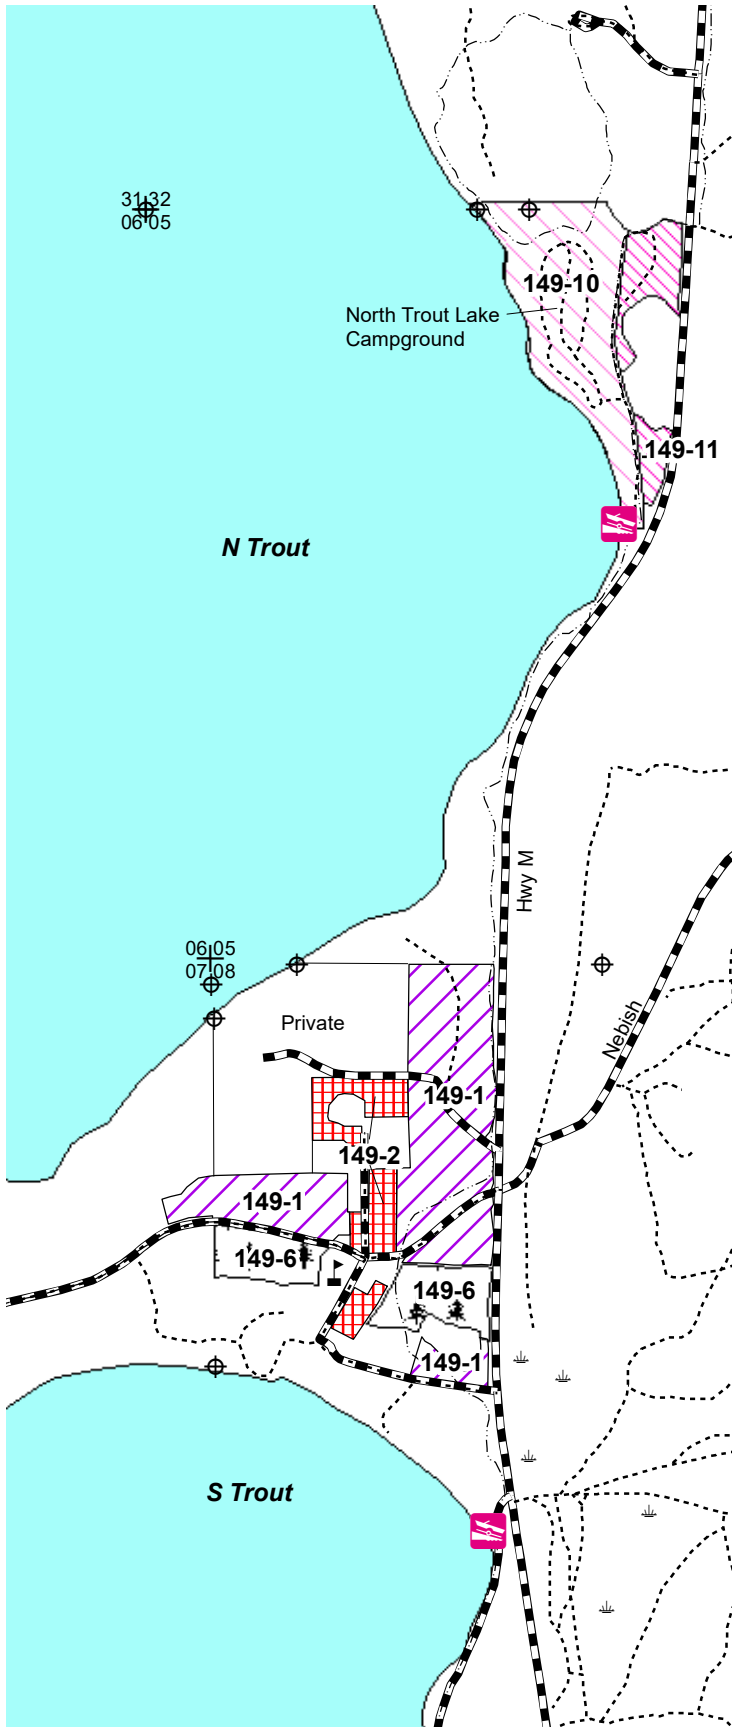

Stand 1 (41 acres) is a red pine plantation of 1914 origin, Last thinned in 2003. The current basal area is 205 sq ft/acre. The stand will be thinned and managed to establish large trees with old-forest characteristics.

Stand 2 (9 acres) is a red pine plantation of 1969 origin. This stand received a first thinning in 2003. The current basal area is 203 sq ft/acre. It will be thinned to promote larger trees and a natural stand appearance.

Stand 6 (13 acres) is a Scotch pine stand. It was also thinned in 2003. Scotch pine is considered an invasive species. The Scotch pine are invading the open areas next to the stand(s) and outcompeting native vegetation. The stand will be clear cut and planted to native species. The Scotch pine regeneration will be cut after the timber harvest.

Stand 10 (27 acres) is the North Trout Lake Campground. Forestry and Parks are working together to thin the suppressed, high risk and hazard trees from the campground. Harvesting will be restricted to winter only. Excessive slash from Norway spruce will be chipped or hauled away after harvest.

Stand 11 (8 acres) is a red pine stand of 1927 origin. No known history of management. This stand will be thinned to improve spacing and reduce the abundance of Scotch pine. The Scotch pine are not being clearcut here due to aesthetic concerns. Winter only harvest.
