Statistical Analysis of Annual Waste Characterization Data

Statistical Analysis of Annual Waste Characterization Data

Prepared by
Robert D. Gibbons Ph.D.

for

Safety Kleen
July 23, 1998

1 Introduction

Since 1990, Safety-Kleen has undertaken a major analytical study each year to document the contaminants in some of its most common waste streams to determine which TCLP waste codes should appear on the manifest for that waste. This Annual Waste Recharacterization Program is both expensive and extensive. Upon review, it appeared that regulatory agency instructions for how to interpret the data might not have been in line with current policy, as reflected in SW846. The general approach is based on development of an upper 90% confidence limit¹ for the true concentration of each constituent, which can in turn be directly compared to regulatory standards to determine if the waste code should or should not be added to a particular waste stream (e.g., Premium Gold Parts Washer Solvent 150). The regulatory basis for this type of comparison stems from U.S. EPA SW846 Chapter 9 (September 1986) guidance on determining if a waste stream is hazardous.² The primary complicating feature is the presence of large numbers of nondetects which raises serious question regarding the use of the parametric approach. In light of this concern, nonparametric methods are used throughout.³ Specifically, following U.S. EPA SW846, we construct a nonparametric 90% upper confidence limit (UCL) for the 50th percentile of the distribution (i.e., median), which is equivalent to the 90% UCL for the mean in the case of a symmetric distribution such as the normal distribution.

¹"Consequently, the CI employed to evaluate solid wastes is, for all practical purposes, a 90% interval." U.S. EPA SW846 (1986) chapter 9 page 6.

²"The upper limit of the CI for μ is compared with the applicable regulatory threshold (RT) to determine if a solid waste contains the variable (chemical contaminant) of concern at a hazardous level. The contaminant of concern is not considered to be present in the waste at a hazardous level if the upper limit of the CI is less than the applicable RT. Otherwise the opposite conclusion is reached. "U.S. EPA SW846 (1986) chapter 9 page 3

³"If the data do not adequately follow the normal distribution even after logarithm transformation, a nonparametric confidence interval can be constructed. This interval is for the median concentration (which equals the mean if the distribution is symmetric)." U.S. EPA Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities, April 1989, page 6-8

2 Method

Following Chapter 9 of SW846, the 90% UCL for the mean concentration obtained from a series of n representative samples is to be compared to the appropriate regulatory standard to determine if the waste stream is hazardous. If the UCL exceeds the standard, the waste stream is considered hazardous. The applicant must compute the UCL that is appropriate for the specific distributional form of the data. Given the large number of nondetects for many of the constituents, it is difficult if not impossible to clearly identify the underlying distributional form of the data. In this case, the U.S. EPA guidance indicates that a nonparametric alternative should be used.⁴

Nonparametric confidence limits are derived as follows. Given an unknown $P \times 100$ th percentile of interest (e.g. the 50th percentile or median),⁵ where P is between 0 and 1, and n concentration measurements, the probability that any randomly selected concentration measurements being less than the $P \times 100$ th percentile is simply P and the probability of exceeding the $P \times 100$ th percentile is $1 - P$. In light of this, the number of sample values falling below the $P \times 100$ th percentile out of a set of n measurements follows a Binomial distribution with parameters n and P .

The connection with the Binomial distribution can be used to determine an interval formed by a given pair of order statistics (i.e. ranked values) that will contain the percentile of interest, in this case the 50th percentile. Similarly, the Binomial distribution can also be used in constructing an upper limit (i.e. one-sided) for the percentile (e.g. a 90% upper confidence limit for the 50th percentile of the distribution). The computational formula for the cumulative binomial distribution $B(x;n,p)$, representing the probability of getting x or fewer successes in n trials with success probability p is given by

$$Bin(x;n,p) \equiv \sum_{i=0}^x \binom{n}{i} p^i (1-p)^{n-i}$$

To draw inference regarding the $P = 50$ th percentile, we set $p = .5$ in the previous equation. For a one-sided UCL we compute

$$1 - \alpha = 1 - Bin(U - 1; n, .5)$$

beginning from the sample median. We then increase U by one until in this case $1 - \alpha$ is equal to at least .90. The smallest value of U that provides $1 - \alpha \geq .9$ is then the order statistic (i.e., ranked value) that is the nonparametric 90% UCL for the 50th percentile of the distribution.

⁴“If the data do not adequately follow the normal distribution even after logarithm transformation, a nonparametric confidence interval can be constructed.” U.S. EPA, 1989

⁵“This interval is for the median concentration (which equals the mean if the distribution is symmetric).” U.S. EPA (1989), page 6-8

3 Illustration

Consider the following most recent 50 data values for PCE (D039) obtained from Premium Gold Parts Washer Solvent-150.

Table 1
Premium Gold Parts Washer Solvent - 150
50 most recent samples in order of increasing concentration
in ppm

<50.000	<1.000	<0.100	<0.100	<0.100
<0.100	<0.100	<0.100	<0.100	<0.100
<0.100	0.110	0.200	0.200	0.220
0.230	0.260	0.510	0.870	0.880
1.000	1.300	1.500	1.800	2.000
2.700	2.700	3.300	5.400	7.000
7.100	12.000	12.300	17.200	19.700
20.000	20.000	21.200	23.600	32.300
51.100	52.500	136.000	211.000	286.000
508.000	635.000	771.000	940.000	2810.000

For $n=50$, $p=.5$ and $1 - \alpha = .9$, we find that $U = 31$ is the smallest order statistic that provides 90% confidence or more ($1 - \alpha = .941$). As such, we select the 31st largest value in Table 1 which is 7.1 ppm as our UCL. Since 7.1 ppm is larger than the standard of 0.7 ppm, then the D039 waste code is required for this waste stream.

4 Conclusion

The data in the following package have been interpreted using the methodology described. The waste codes for each stream were determined as those parameters for which the 90% UCL for the median concentration was above the regulatory limit, based on review of the last two years of samples or the most recent 50 samples, whichever yielded the larger number of samples to consider.

Statistical Analysis: California Results v. National

Statistical Comparison of Annual Recharacterization Data from California to the Rest of the Nation

Prepared by
Robert D. Gibbons Ph.D.
for
Safety Kleen
March 2004

1 Introduction

Since 1990, Safety-Kleen has undertaken a major analytical study each year to document the contaminants in some of its most common waste streams to determine which TCLP waste codes should appear on the manifest for that waste. This Annual Waste Recharacterization Program is both expensive and extensive. The general approach is based on development of an upper 90% confidence limit for the true concentration of each constituent, which can in turn be directly compared to regulatory standards to determine if the waste code should or should not be added to a particular waste stream (*e.g.*, Premium Gold Parts Washer Solvent 150). The regulatory basis for this type of comparison stems from U.S. EPA SW846 Chapter 9 (September 1986) guidance on determining if a waste stream is hazardous. As stated by U.S. EPA, "The upper limit of the CI for μ is compared with the applicable regulatory threshold (RT) to determine if a solid waste contains the variable (chemical contaminant) of concern at a hazardous level. The chemical contaminant of concern is not considered to be present in the waste at a hazardous level if the upper limit of the CI is less than the applicable RT. Otherwise the opposite conclusion is reached" (U.S. EPA SW846 (1986) chapter 9 page 3). The primary complicating feature is the presence of large numbers of nondetects which raises serious question regarding the use of the parametric approach. In light of this concern, nonparametric methods are used throughout this analysis. Again, as stated by U.S. EPA, "If the data do not adequately follow the normal distribution even after logarithm transformation, a nonparametric confidence interval can be constructed. This interval is for the median concentration (which equals the mean if the distribution is symmetric)" (U.S. EPA *Statisti-*

cal Analysis of Ground-Water Monitoring Data at RCRA Facilities, April 1989, page 6-8). Specifically, following U.S. EPA SW846, Safety Kleen constructs a nonparametric 90% upper confidence limit (UCL) for the 50th percentile of the distribution (*i.e.*, median), which is equivalent to the 90% UCL for the mean in the case of a symmetric distribution such as the normal distribution.

In review of this work, the State of California (DTSC/HML) has requested evidence that the data collected by Safety Kleen (SK) from California generators are representative of the data from the rest of the nation. Note that this involves a large number of statistical comparisons. There are as many as 11 waste streams and 33 constituents per waste stream (metals, volatile organics, semivolatile compounds, pH and flash point). In all, there are as many as $11 \times 33 = 363$ comparisons to be made. Using 95% confidence, there will be as many as $363 \times .05 = 18$ comparisons that are significantly different by chance alone. In the following sections, a statistical methodology is described that will detect real differences when they are present (*i.e.*, have a low false negative rate) and not identify differences that are consistent with chance expectations (*i.e.*, have a low false positive rate).

2 Method

To compare the California data to the rest of the nation, data from all states except California will be used to construct a statistical prediction interval for the mean (or median in the nonparametric case) concentration obtained from the California generator samples. If the actual mean concentration for the California samples is within the prediction interval, then we can conclude with 95% confidence that the California concentrations are consistent with the concentrations observed across the nation. By contrast, if the California mean concentration is outside of the prediction interval, then we can conclude with 95% confidence that the California samples contain concentrations that are either higher or lower than those found in the rest of the country (for a particular waste stream and constituent). A two-sided interval will be used to determine if additional waste codes should be added or if some waste codes should be deleted from the California list.

In the following sections, statistical details of normal, lognormal, and nonparametric forms of these prediction intervals are provided.

2.1 Normal Prediction Intervals for the Mean of m Future Measurements

In certain cases, we may be interested in comparing an average concentration from a small group to a much larger control population. For example, we may wish to compare the mean concentration for generators in California, to the concentration distribution for the rest of the country. One approach to solving this problem is to compute a normal prediction interval for the mean of m new samples, based on a background data set of n samples. For example, the m samples may be from all generators in California, and the n samples may be from a large number of generators across the nation (excluding California). The $(1 - \alpha)100$ percent normal prediction interval for a single future mean of m samples is:

$$\bar{x} \pm t_{[n-1, 1-\alpha/(2k)]} s \sqrt{1/m + 1/n}, \quad (1)$$

where t is an upper percentage point of Student's t -distribution on $n-1$ degrees of freedom, s is the standard deviation of the n background samples, \bar{x} is the mean of the n background samples, and k is the number of statistical comparisons being performed.

3 Lognormal Prediction Intervals for the Median of m Future Measurements

When the distribution of the n background measurements is shown to be lognormal, the $(1 - \alpha)100\%$ lognormal prediction interval for the median of the next m measurements is:

$$\exp\left(\bar{y} \pm t_{[n-1, 1-\alpha/(2k)]} s_y \sqrt{1/m + 1/n}\right). \quad (2)$$

where \bar{y} and s_y are the mean and standard deviation of the natural log transformed data. While in the normal case, the analogous prediction interval is for the mean, in the lognormal case, the exponentiated limit is for the median value.

4 Lognormal Prediction Intervals for the Mean of m Future Measurements

When the data are lognormally distributed and the comparison of interest is in reference to a future mean, we can use Land's coefficients to obtain an

approximate $(1 - \alpha)100\%$ lognormal prediction interval for the mean of m future measurements. The lower prediction limit is

$$\exp \left(\bar{y} + .5s_y^2 + H_{\alpha/(2k)}s_y\sqrt{\frac{1}{m} + \frac{1}{n}} \right), \quad (3)$$

and the upper prediction limit is

$$\exp \left(\bar{y} + .5s_y^2 + H_{1-\alpha/(2k)}s_y\sqrt{\frac{1}{m} + \frac{1}{n}} \right), \quad (4)$$

where H_α and $H_{1-\alpha}$ are factors for deriving lognormal confidence intervals given by Land (1971, 1975).

5 Nonparametric Prediction Intervals for the Median of m Future Measurements

In the nonparametric case, we can also construct a prediction interval for the median of m measurements based on a background of n samples. The idea is to identify a pair of upper and lower order statistics of the n background measurements that will provide $(1 - \alpha)100\%$ confidence of including the median California measurement. Note that for nonparametric intervals, the mean is not defined, so we must construct an interval for a future median. Fligner and Wolfe (1979), Guilbaud (1983) and Hahn and Meeker (1991) illustrate how the inverse hypergeometric distribution (Guenther, 1975) can be used to identify the appropriate order statistic of the n background measurements that will provide the desired level of confidence $1 - \alpha$, for given values of n and m . The inverse hypergeometric distribution is computed as the function

$$G(l, u, r, m, n) = \sum_{i=l}^u g(i, r + i, m, n) \quad (5)$$

where

$$g(i, r + i, m, n) = \frac{\binom{r-1}{i} \binom{n-r}{n-i}}{\binom{n}{m}} \quad (6)$$

and l is the lowest and u is the highest order statistic in the current interval, r is the median rank of the m new samples and n is the number of background measurements. To obtain a two-sided upper prediction limit (UPL), we iteratively solve for

$$G(l, u - 1, r, m, n) \geq 1 - \alpha/(2k), \quad (7)$$

for l and u .

6 Summary of Statistical Approach

In summary, depending on detection frequency, and distributional form, normal, lognormal, or nonparametric prediction intervals were computed to compare the mean(median) concentration in California for each waste stream, and for each monitored constituent to the national database (excluding California). For normal and lognormally distributed constituents, we constructed a prediction interval for a future mean. If distributional testing for the national database (excluding California) did not support normality or lognormality, or if the detection frequency was less than 50%, we computed a nonparametric prediction interval for a future median concentration. Given the large numbers of constituents, we adjusted the individual comparison false positive rate (for each waste stream) to provide an overall false positive rate of 5% (*i.e.*, 95% confidence) for each waste stream.

In those cases in which the actual mean(median) for the California data exceeded the UPL, a normal 90% upper confidence limit was computed for that waste, stream, and constituent, and that state-specific limit will be used to determine whether a specific waste-code should be associated with that waste stream in California.

7 Results

The previously described statistical methodology was applied to the following constituents:

Constituents used in the Analysis

<u>Constituent</u>
1,1-dichloroethylene
1,2-dichloroethane
1,4-dichlorobenzene
2,4,5-trichlorophenol
2,4,6-trichlorophenol
2,4-dinitrotoluene
2-methylphenol
Arsenic
Barium
Benzene
Cadmium
Carbon tetrachloride
Chlorobenzene
Chloroform
Chromium
Flash point
Hexachlorobenzene
Hexachlorobutadiene
Hexachloroethane
Lead
M+p-cresol
Mercury
Methyl ethyl ketone
Nitrobenzene
Pentachlorophenol
pH
Pyridine
Selenium
Silver
Tetrachloroethylene
Trichloroethylene
Vinyl chloride

in the following waste streams:

Waste Streams used in the Analysis

Waste Stream
Antifreeze
Auto Oil
Dry Cleaner Bottoms (DCB)
Aqueous Parts Washer (APW)
Immersion Cleaner
Industrial Oil
Paint Waste
Parts Washer Solvent (PWS) 105+150
Parts Washer Solvent 105R
Parts Washer Solvent 150
Parts Washer Solvent Sludge/Dumpster Mud (SDM)
Parts Washer Solvent Tank Bottoms (TB)

Overall, the majority of California data were consistent with the rest of the United States. 1,4DCB was less than the immersion cleaner LPL, whereas pH exceeded the UPL. For paint waste, TCE was less than the national LPL. For PWS 105+150, 1,4-DCB, 2-methylphenol, and benzene all exceeded the corresponding national UPLs. For PWS-SDM, pH exceeded the UPL. For PWS-TB, flash point was less than the national LPL.

For these waste streams and constituents, the California 90% normal UCLs (which can be used in place of the national values) were

Constituents used in the Analysis				
Waste Stream	Constituent	CA UCL in mg/L	Nat'l UCL in mg/L	Reg Limit in mg/L
Antifreeze	PCE	272	NA	0.7
Auto Oil	PCE	696	NA	0.7
Auto Oil	Benzene	21	NA	0.5
Immersion Cleaner	1,4-DCB	80	140	7.5
Immersion Cleaner	pH	10.5	10	2-12.5
Paint Waste	TCE	64	27.1	0.5
Parts Washer Solvent 105+150	1,4-DCB	.54	<2.0	7.5
Parts Washer Solvent 105+150	2-methylphenol	.44	1.8	200
Parts Washer Solvent 105+150	Benzene	8.7	2.2	0.5
Parts Washer Solvent SDM	pH	8.7	8.2	2-12.5
Parts Washer Solvent TB	Flash Point	Too Few (n=2)	145	140

These UCLs can be used in place of the national UCLs; however, I do not recommend use of the California UCLs for PCE in antifreeze and auto oil, because they are elevated due to a single outlying value. All analytical Tables are presented in the Appendices.

	pH	EPA SW846 9045
	Apparent Specific Gravity and Bulk Density of Waste	ASTM D5057
	TCLP Metals	EPA SW846 1311, 6010, 7470, 7471
	TCLP Semi-Volatiles	EPA SW846 1311, 8270
	TCLP Volatiles	EPA SW846 1311, 8260
Bottom Sediment from the Spent Parts Washer Solvent Tank and Return & Fill	Same As Above	
Immersion Cleaner	Same As Above	
Paint and Paint Gun Cleaner Waste	Same As Above	
Aqueous Brake Cleaner	Same As Above	
Dry Cleaner Waste	Same As Above	

Based on the process generating the waste streams outlined in the above table, 40 CFR 261.24 regulated herbicides and pesticides are not expected to be present; and are therefore, not included in the parameters tested under the Annual Re-Characterization Program.

Analysis is performed on a representative grab sample obtained from a single customer's waste container using a COLIWASA (Composite Liquid Waste Sampler) unless compositing is required by a facility-specific waste analysis plan.

Exhibit C-5

Annual Recharacterization Sampling Method Requirements

2011 Annual Re-characterization Sampling Requirements

Good sampling practices are critical to the success of the Annual Re-characterization program. Please take your time when pulling samples, ensuring that all of the following requirements are fulfilled.

Equipment Checklist

NOTE: To minimize opportunity for contamination, all AR sampling equipment is to be stored in facility office building until needed for actual sampling.

- ✓ Required PPE – Full face respirator, nitrile gloves, safety glasses
- ✓ Disposable COLIWASA (SK P/N 8941)
- ✓ Disposable plastic scoop
- ✓ Disposable plastic bucket if composite required (e.g., 6 gallon SK P/N 706)
- ✓ Sample Kits
 - SK P/N 3419 – Required for all dry cleaning related materials
 - SK P/N 82260 – Required for all other samples
- ✓ Housekeeping Supplies
 - PIG Absorbent
 - Disposable rags
 - Plastic garbage bags
- ✓ Non sparking tools
- ✓ Grounding and bonding equipment
- ✓ Paperwork and Packaging Supplies
 - Chain of Custody form
 - Pen and Sharpie Marker
 - Packaging Tape

Pre-sampling Preparation

- ✓ Personnel Resources – 2 people
- ✓ Time – allow 15 to 30 minutes per sample
- ✓ **IMPORTANT - Make arrangements with warehouse workers/material handlers to set aside containers from different customers. Each container sampled must be from a different customer.**
- ✓ Place sample kit freezer packs in the freezer 24 hrs prior to sampling event. Purchase bags of ice if shipping samples in warmer weather.
- ✓ Fill out Chain of Custody (COC) forms completely

COC Requirements

The Customer Name(s) and Customer Number(s) associated with the container(s) being sampled must be documented on the COC. In the event the analytical report shows atypical waste codes, we'll be able to track the sample back to the generator to discuss their specific process and possible source for contamination. Decision will need to be made regarding whether or not the generator's waste should remain as CORE, or is better handled through CWS.

A unique identification number must be assigned to each sample using the format **AR2010_Branch #_incremental #** (e.g., AR2010_202801_1, AR2010_202801_2, etc.). The same number must be written on the associated sample jar custody label so that the lab can match-up paperwork with samples upon receipt. Complete all fields in the COLLECTION INFORMATION section of the COC. The sample collector must sign the RELINQUISHED BY column and enter the date and time of shipment. The sample collector must also check 'YES' with respect to if the sample was kept chilled (**NOTE: 'YES' should always be checked as samples are required to be chilled**).

Enter the air bill number on the COC form and make a copy of the form for your records.

Sampling

The majority of facilities' WAPs require "grab samples". A select few, however, require composite samples. See section below on how to obtain a composite sample.

The following table summarizes how samples are typically taken. Keep in mind, the waste streams required for sampling are permit specific (i.e., not every facility will be required to sample every stream outlined in the below table).

Sample Type	Sample Location	Sampling Device
Aqueous Brake Cleaner	"Suitcase"	Grab sample using multiple COLIWASA pulls or pour contents into a brand new bucket
DC Naptha/Perc Bottoms/Filters	Drum	Grab sample using COLIWASA
Immersion Cleaner	Drum	Grab sample using COLIWASA
Paint Gun Cleaner/Paint Waste	Drum	Grab sample using COLIWASA
PWS Bulk Tank	Tank	Grab sample from tank valve or similar
APW/PWS Dumpster Sludge	Dumpster	Grab sample using Scoop
APW/PWS Tank Bottoms	Tank	Grab sample during tank clean out
PWS 105	Drum	Grab sample using COLIWASA
PWS 150	Drum	Grab sample using COLIWASA
APW	Drum	Grab sample using COLIWASA
Antifreeze	Drum	Grab sample using COLIWASA
Used Oil	Drum	Grab sample using COLIWASA

Prior to sampling, you must have completed training on proper grounding and bonding techniques (see SK SOP 3302 *Standard Operating Procedure for Sampling Policies and Technique*)

1. Bring all items in the *Equipment Checklist*, including frozen sample kit freezer packs/ice, with you to the sampling location.
2. Wear required PPE. While one individual is pulling the sample, the second individual should be completing the *Chain of Custody (COC)* forms and *Custody Seals* for the sample jars.
3. Ensure containers (e.g., drums) are grounded and equalize potential charge for non-metallic sampling devices and all tools when opening, sampling from, and closing the container. (see SK SOP 3302)
4. Use non-sparking tools to open metal drums
5. Obtain a representative sample using a disposable plastic scoop or disposable COLIWASA

IMPORTANT – a new scoop or COLIWASA must be used for each sample pulled

Place all sampling debris in plastic garbage bag(s) and dispose of as Branch Generated Debris

6. Ensure the sample jar lid is tight. Seal the lid to the jar by wrapping with packaging tape.
7. Attach *Custody Seal* across the lid of the jar in such a way that the seal must be broken to open the jar. The *Custody Seal* must be signed by the sampler and contain the date, time the sample was pulled, and unique sample ID (ID must follow required format and match the ID written on the accompanying COC)
8. Place the sample jar into the TCLP kit with frozen freezer packs. Use additional bagged ice if shipping during warm temperatures. Close up the Styrofoam cooler and place the COC paperwork on top before sealing up the cardboard shipping box using plenty of shipping tape.
9. Samples need to be pulled Monday thru Thursday only and shipped out the same day via *FedEx Priority Overnight* to TestAmerica Laboratory in Pittsburgh, PA. This is to ensure samples arrive at the lab within EPA hold time and temperature requirements.

IMPORTANT – In order to ship samples, individual must have undergone and passed the IATA Dangerous Goods Regulations Training. Sample shipping requirements are outlined in [BOG O310-005 \(US\)](#) and [OC310-005/OC310-005 FC \(Canada\)](#).

**TestAmerica Laboratory
301 Alpha Drive
Pittsburgh, PA 15238**

Sampling using a COLIWASA

Goal – Using a **Composite Liquid Waste Sampler (COLIWASA)**, obtain a vertical column of liquid representing an accurate cross-section of the material being sampled.

- Ensure the COLIWASA is functioning properly before use. Confirm that the stopper is securely attached to the aluminum rod and provides a good seal when in the closed position.
- Open the COLIWASA by placing the stopper mechanism in the open position. The COLIWASA must not be lowered with the stopper in place. Opening the stopper after the tube is submerged will cause material to flow in from the bottom layer only, resulting in gross over-representation of that layer.
- Slowly lower the COLIWASA into the liquid so that the levels of liquid inside and outside the sampler tube remain about the same. If the level of the liquid in the sample tube is lower than that outside the sampler, the sampling rate is too fast and a non-representative sample will result.
- Pull up on the stopper mechanism to close the COLIWASA when it reaches the desired depth in the liquid.
- Slowly withdraw the COLIWASA from the liquid while wiping or dabbing the outside of the tube with a rag (Note: avoid building static by removing too quickly)
- Place the end of the COLIWASA into the 32 oz sample jar and discharge contents by slowly opening the stopper mechanism

Obtaining a Composite Sample (Only those branches that require a composite per permit)

- Obtain a new disposable plastic bucket (e.g., 5 or 6 gallon)
- If a COLIWASA is required to pull the sample, use a new COLIWASA for each container sampled
- For each container sampled, you'll actually need to pull the following two samples...
 - Place one COLIWASA volume into the compositing bucket
 - Using the same COLIWASA, fill a new quart jar (SKVS retain sample jar p/n 8862). This sample jar needs to be labeled with the customer name and number associated with the container that is being sampled. This sample will serve as a retain in the event analytical shows atypical results and Safety-Kleen needs to determine the associated generator. These retains need to be stored until the associated lab reports are evaluated.
- After sampling all necessary containers, use a clean COLIWASA to stir the contents of the bucket.
- Using the same COLIWASA, pull a sample of the mixture for Annual Re-characterization testing per requirements in the section titled "Sampling" above.

Exhibit C-6

2013 Annual Recharacterization Ranked Data Tables

KEY

General information: The macro will use the last 3 years of analytical data in the non-parametric statistical analysis developed by Dr. Gibbons. For example, the National Waste Codes for 2012 were based on data from 2011, 2010, and 2009. Ideally, 50 data points will be available for each waste stream, but at least 30 are required. If 30 data points are not available for a stream for the last 3 years, then data from earlier years will be used.

STATE:	State where the Safety-Kleen facility resides where the sample was pulled.
CLIENT_ID:	Type of sample collected.
PARAMETER:	The parameter for which the results are reported for the line.
BRANCH_ID:	The Safety-Kleen assigned Branch Number where the sample was pulled.
LAB_SAMPLE_ID:	Lab assigned identifier for the sample.
RESULT:	Actual lab result from the sample analytical.
RANKED DATA:	The result used in the data ranking for the sample type. This RANKED DATA will be equal to the RESULT for most entries. The RANKED DATA will differ from the actual RESULT when the RESULT indicates a non-detect. In these situations, the RANKED DATA will be one half the RESULT. For example, if the lab reports Tetrachloroethylene (D039) for a given sample as "<1.0 ppm", a concentration of 0.5 ppm will be used in the statistical analysis.
UNITS:	The unit of measure for the RESULT, RANKED DATA, and REPORTING LIMIT.
QUALIFIERS:	<p>B – Sample tested positive for a given parameter and the associated analytical/method blank was contaminated with the parameter in question</p> <p>E – Concentration of parameter exceeds highest calibration standard for method in question. Sample requires dilution and re-analysis.</p> <p>H – Hold time exceeded for parameter in question</p> <p>J - Result is less than the reporting limit (RL) but greater than or equal to the method detection limit (MDL) and the concentration is an approximate value.</p> <p>U - Indicates the parameter was analyzed for but not detected above the lab's reporting limit (RL) (U is equivalent to a less than sign <)</p>
REPORTING LIMIT:	A lab's reporting limit (RL) is typically equivalent to the lowest concentration analytical standard used to calibrate a piece of analytical equipment (e.g., gas chromatograph) for a given parameter. The method detection limit (MDL) for a given parameter, on the other hand, is statistically derived. Labs will typically only report concentrations that exceed the RL. If the lab detects and reports a concentration between the MDL and the RL, it will be flagged with a "J" qualifier, designating an <u>approximate</u> concentration.
Uth:	The 90% UCL for the mean concentration obtained from a series of <i>n</i> representative samples
YEAR:	The year the sample for the data point was originally collected.
COUNT:	Number of data points used in the statistical analysis for a given parameter (<i>n</i> representative samples)
CITY:	City where the Safety-Kleen facility resides where the sample was pulled.

Facility Emergency Equipment

(See Exhibit D-2 for Specific Location for equipment)

Description	Location	Quantity	Capabilities
Dry Chemical Fire Extinguishers-Hand held (type ABC)	Office area, warehouse, storage shed, return and fill shed	12	Able to extinguish type A, B, and C fires
First Aid Kits	Office/warehouse area	2	Provides items used to give basic medical attention
Eye wash station	Warehouse area, at return and fill	1	Provide a means of rinsing possibly harmful substances from the eyes and skin
Shower	Office area, warehouse area	2	Decontaminate plant personnel in the event of a spill or release of harmful material
Telephones/paging system	Office/warehouse area, return and fill	14	Alert personnel of an on-site emergency or spill incident, evacuation orders and general in-plant communications
Alert horn/strobe light	Tank farm	1	Sounds and flashes when tanks are at 95% capacity
Panic Button (internal alert only)	Warehouse area, return and fill	5	Alerts personnel of an on-site emergency or spill incident
Spill Kits / Absorbents	Tank farm, warehouse, return and fill areas	4	Able to contain and absorb spilled liquids
Sprinkler System	Warehouse Area	1	Able to extinguish fires in warehouse areas when activated

Facility Contingency Plan

CONTINGENCY PLAN

ABSTRACT

PURPOSE: This plan describes the proper action to be taken by employees during an emergency.

RESPONSIBILITIES: The emergency coordinator or alternate is responsible for implementing the plan during an emergency.

EMERGENCY COORDINATOR: The emergency coordinator and alternate emergency coordinator are designated Safety-Kleen employees who have been trained for these positions.

EMERGENCY NOTIFICATIONS:

Safety-Kleen 24-Hr Emergency Response 800-468-1760

National Response Center 24-Hr Emergency 800-424-8802

Wisconsin Department of Emergency Management 800-943-0003

Waukesha Fire Department 911
or 262-524-3651

Waukesha Police Department 911
or 262-524-3831

PURPOSE

The Contingency Plan describes the actions to be taken by employees in the event of a spill, fire, or other emergency, either onsite or offsite. It includes the information necessary to address emergency situations efficiently and in such a manner as to prevent or minimize hazards to human health or the environment due to fire, explosion, or any other release of hazardous waste to the air, soil, surface water, or ground water.

EMERGENCY COORDINATOR RESPONSIBILITIES

The emergency coordinator, or alternate emergency coordinator, is responsible for implementing the Contingency Plan during an emergency; however, all employees must be familiar with the procedures in this plan and are responsible for proper implementation of the plan should the emergency coordinator or the alternate emergency coordinator is unavailable.

The emergency coordinator and the alternate emergency coordinator must be familiar with all aspects of this Contingency Plan, the operations and activities at the facility, the location and characteristics of materials handled, the location of all records within the facility and the facility layout. In addition, these coordinators have the authority to commit the resources necessary to carry out the Contingency Plan. The emergency coordinator and alternate emergency coordinator's home addresses and telephone numbers, as well as the office telephone number are listed at the end of this document. Also listed are typical functions of each employee during an emergency. At least one employee will be at the facility, or on call, to respond to an emergency situation at all times.

Responsibilities During an Emergency

Whenever there is an imminent or actual emergency, the emergency coordinator (or the alternate when the emergency coordinator is not available) will:

- a. Activate the internal facility communication system to notify all facility personnel;
- b. Immediately notify Safety-Kleen's Emergency Response Contractor/Coordinator using the 24-hour telephone number (currently 800/468-1760), which is the Safety-Kleen Incident Notification System;
- c. Notify appropriate state or local agencies with designated response roles if necessary; and,
- d. Notify Wisconsin Department of Emergency Government and/or the National Response Center, if necessary.

Whenever there is a release, fire, or explosion, the emergency coordinator or alternate must immediately try to identify the character, exact source, amount, and extent

of any contamination. Because of the limited number of materials being handled at the facility, he or she may do this by observation or, by review of facility records. If necessary, outside laboratories may be contacted to perform chemical analysis.

Concurrently, the emergency coordinator or alternate must assess possible hazards to human health or the environment that may result for the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion, (e.g., the effects of any toxic, irritating, or asphyxiating gases that may be generated, or the effects of any hazardous run off).

During an emergency, the emergency coordinator or alternate must take all measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous material at the facility. These measures must include, where applicable, stopping processes and operations, collecting and containing released waste, and removing or isolating containers.

Remedial Action Responsibilities

If the environment has been contaminated or there is a potential for contamination as a result of a fire, explosion, or spill, the emergency coordinator or alternate emergency coordinator must contact the state Wisconsin DNR and Safety-Kleen Emergency Response Coordinators to report the incident. The treatment, storage, and/or disposal of the recovered waste, contaminated soil or surface water that results must be arranged by Safety-Kleen and carried out as expeditiously as possible.

The emergency coordinator or alternate emergency coordinator must ensure that, in the affected area(s) of the facility:

- a. No substance that may be incompatible with the released material is brought on site until cleanup procedures are completed; and
- b. All emergency equipment listed in the Contingency Plan is cleaned and fit for its intended use before operations are resumed.

Reporting Responsibilities

If the emergency coordinator or alternate determines that the facility has had a release that could threaten human health or the environment, the coordinator must report those findings as follows:

- a. If the assessment indicates that evacuation of local areas may be advisable, the coordinator must immediately notify appropriate local authorities
- b. The coordinator must immediately notify the Safety-Kleen Emergency Response Contractor/Coordinators and must notify the Wisconsin Department of

Emergency Government and/or the National Response Center. This notification shall include the following:

- (1) Name and telephone number of notifier;
- (2) Name and address of facility;
- (3) Time and type of incident (e.g., release, fire);
- (4) Name and quantity or material(s) involved, if known
- (5) Extent of injuries, if any; and,
- (6) Possible hazards to human health, or the environment outside the facility

Safety-Kleen will notify the appropriate state and local authorities that the facility is in compliance with Wisconsin Admin Code NR 664.0056(9) before operations are resumed in the affected area(s) of the facility.

Chain of Command

Based on the emergency response procedures described above, the chain of command during an emergency is as follows:

- a. The person who discovers/causes the spill reports to the emergency coordinator or alternate emergency coordinator;
- b. The emergency coordinator or alternate emergency coordinator contacts the Safety-Kleen Emergency Response Contractor/Coordinators
- c. Safety-Kleen's Emergency Response Contractor/Coordinators will contact an emergency response contractor, if required.

Government Agencies and Local Authorities to Be Notified

During an emergency, the following government agencies and local authorities may be contacted:

<u>Wisconsin DNR or Authority</u>	<u>Rationale</u>
Police Department	Notify if there is imminent danger to human health or need for evacuation
Fire Department	Notify if there is a fire, uncontrolled spill or other imminent danger
Hospital	Notify if there are any injuries
Wisconsin Department of Emergency Government	Report Releases
National Response Center	Report Releases
SK-Emergency Response Contractor	Call to assist with remedial action after a release

Arrangements have been made to familiarize the police department, fire department, and local emergency response teams with the layout of the facility, properties of hazardous materials handled and associated hazards, locations where facility personnel normally work, entrances to and roads inside the facility, and possible evacuation routes. Arrangements have been made to familiarize the local hospital with the types of injuries or illnesses that could result from fires, explosions, or releases at the facility.

EMERGENCY RESPONSE PROCEDURES

Response actions to be taken in specific emergency situations are described in the sections which follow.

Minor Spills

If a spill should occur while pouring spent solvent into a drum washer/dumpster or filling containers with solvent product at the return and fill station, and it is contained in the secondary containment at the base of the return and fill station. Remedial action will not be necessary.

Should the spill occur outside the containment, different actions must be taken depending on whether the spill occurs on a paved or unpaved area:

- a. If the solvent spills on a paved area, it must be collected with absorbent material. The sorbents will be collected, drummed, and transported to a licensed hazardous waste management facility for proper processing. Should water be present when a spill occurs, all of the liquid will be treated as hazardous waste, unless otherwise determined, and pumped into the spent solvent storage tank. The secondary containment of the container storage area is emptied using a wet/dry vacuum, pump, or absorbent materials. Detergent can be used as needed. All material collected from spill cleanups will be treated as hazardous waste.
- b. If the solvent spills on an unpaved area, the free solvent must be collected with absorbent material. The absorbent material and any contaminated soil will be collected, containerized and transported to a licensed hazardous management facility for proper processing.

If a spill occurs while moving or delivering containers outside of the warehouse, the response actions described above must be followed. Spills inside the warehouse will be prevented from contaminating the environment by the concrete floor and the secondary containment. In the event of a spill indoors, the doors should be opened to improve the ventilation in the confined area (if safe to do so). Following instructions of the appropriate Material Safety Data Sheet, the worker will enter the area wearing the required personal protective equipment (e.g., gloves, aprons, safety glasses, and respirator), collect the liquid, containerize it and move it to storage. Cleanups are completed only when the workers have cleaned themselves and the emergency equipment with soap and water.

Major Spills

Any spill that cannot be completely remediated using the methods described above is a major spill. A major spill is usually the result of a vehicular accident, tank overfilling, equipment failure, or a fire. Spilled material that escapes collection can contaminate soil, surface water,

ground water, sanitary sewer systems, and storm sewer systems. Emergency response to this type of spill should be as follows:

- a. Assist any injured people;
- b. Stop the flow of materials, if possible;
- c. Retain, contain, or slow the flow of the solvent if it cannot be stopped;
- d. If solvent escapes containment efforts, immediately call the local fire department, and report to the emergency coordinator or alternate emergency coordinator and Safety-Kleen's Emergency Response Coordinators.
- e. Immediately recover, to the extent possible, the spilled materials to reduce property and environmental damage. Start recovery operations immediately.

The emergency coordinator or alternate emergency coordinator shall report any incident as soon as possible to Safety-Kleen's Emergency Response Contractor/Coordinators using the 24-hour telephone number. As determined by Safety-Kleen's Emergency Response Coordinators an emergency cleanup response contractor will be called. If deemed necessary, calls will be made to the National Response Center and Wisconsin Department of Emergency Government.

The person reporting a spill should be prepared to give his/her name, position, company name, address, and telephone number. The person reporting should also describe the material spilled and if possible, some estimate of the amount, and the contaminant status, and specify any equipment needed.

Fire Control Procedures

If a small fire occurs, Safety-Kleen personnel must act quickly to put out the fire before it spreads to other parts of the facility, if possible to do so without undue threat to personal safety. If it cannot be extinguished immediately, evacuate the facility and call the fire department.

It is Safety-Kleen's policy that personnel only respond to incipient fires; that is, those that can immediately be extinguished using a fire extinguisher. Any fire that cannot be brought under control immediately, or which has the potential to become uncontrollable warrants implementation of the evacuation plan.

Vapors of parts cleaner solvent exposed to a spark or open flame may flash at temperatures over 148°F. A parts washer solvent fire can best be extinguished with foam. If foam is not available, sweeping the fire with water fog can cool it, directing the water spray to push the flames into a confined area, if possible. The flame should not be extinguished until the flow of the solvent has been stopped. Attention should then be directed immediately to extinguishing the flame.

Dry cleaning wastes (namely tetrachloroethylene) are not flammable, but can produce phosgene gas and hydrochloric acid at very high temperatures (approximately 1200°F). The

potential for the materials reaching a decomposition state is minimal, however, Safety-Kleen personnel and local authorities must be aware of the proper response should a fire affect the container storage area. Emergency response should be as follows:

- a. Isolate the hazard area and deny entry to unauthorized personnel;
- b. Stay upwind, keep out of low areas;
- c. Ventilate closed spaces before entering them;
- d. Wear positive pressure breathing apparatus and protective clothing;
- e. Evacuate a 600-foot radius endangered by the gas.

A fire in the container storage area can best be extinguished by foam, water fog, or water spray. Parts cleaner solvent and immersion cleaner can generate carbon monoxide and other poisonous gases when exposed to heat. Therefore, it is important to wear positive pressure breathing apparatus and full protective clothing in the affected area. If a fire in or near the areas where these wastes are stored occurs:

- a. Isolate the area and deny entry to unauthorized personnel;
- b. Stay upwind, keep out of low areas;
- c. Wear protective clothing and self-contained breathing apparatus.

A dry chemical, carbon dioxide or foam will best extinguish the fire. Cool the containers with water until well after the fire has been extinguished.

EVACUATION PLAN

Clearly marked exits are in the warehouse and office areas. Employees are trained to recognize all potential exit routes. The site evacuation plan is shown in Exhibit D-4. When an uncontrolled fire or release has occurred, all personnel are to be evacuated from the area and assembled across Badger Road Street to assure that all personnel are accounted for and out of the hazardous area. Notice of evacuation will be made via the intercom system or by word of mouth.

All guests and visitors are required to sign in at the main office. If an evacuation of 2200 S. West Avenue is required, the guest book will be used to determine if there are any unaccounted for guests or visitors. The Emergency Coordinator (or acting alternate) will take a head count at the meeting area.

The fire department must be notified at the time of evacuation, either from a safe building or from a neighboring facility

ARRANGEMENTS WITH EMERGENCY RESPONSE CONTRACTORS

Safety-Kleen Systems maintains a contract with a third-party emergency response contractor (currently InfoTrac-subject to change). The initial notification for emergency response is to the Safety-Kleen Environmental Response phone number which takes the initial call and makes the appropriate initial internal notifications, including a call to the corporate emergency response contractor coordinator, Environmental Management, Inc. (EMI). EMI is contracted to then notify a local emergency response contractor who is sub-contracted to them to respond to the

incident. These contractors will be contacted to provide emergency assistance during a release and/or cleanup.

Copies of the current Contingency Plan are made available to the City of Waukesha Police and Fire Departments, and the Waukesha Memorial Hospital. Safety-Kleen requests that each organization keep the Contingency Plan on file and notify Safety-Kleen if they refuse to enter in an agreement or cannot comply with the procedures outlined within the plan. The agencies are invited to visit the facility to become more familiar with the site and the general location of hazardous material storage.

IMPLEMENTATION SCHEDULE

Any discrepancies or deficiencies found during a routine inspection must be corrected expeditiously to insure that the problem does not lead to an environmental or human health hazard. Where a hazard is imminent or an accident has already occurred, remedial action must be taken immediately. The Branch General Manager has the overall responsibility for correcting any discrepancies found during the routine inspection, and will consult with the corporate environmental and engineering staffs to design an implementation schedule for remedial action.

AVAILABILITY AND REVISION OF THE CONTINGENCY PLAN

This plan, and all revisions to the plan, are kept at the facility and are regularly updated throughout the operating life of the facility. This plan and all revisions to the plan are made readily available to employees working at the facility. The plan will be reviewed and updated, if necessary, whenever:

- a. The facility operations are revised to allow new wastes to be stored or treated, or applicable regulations are revised;
- b. The list or location of emergency equipment changes;
- c. The facility changes in its design, construction, operation and maintenance, or other circumstances in a way that:
 - (1) Increases the potential for fires, explosions, or releases of hazardous constituents, or
 - (2) Change the response necessary in an emergency;
- d. The names, addresses, or phone numbers of emergency coordinators change;
- e. The employee assigned to each emergency task changes; or
- f. The plan fails when implemented in an emergency.

Administrative Support	<ul style="list-style-type: none"> • Assist with evacuation/headcount • Assist Emergency Coordinator as necessary

PLAN IMPLEMENTATION

If the Contingency Plan is implemented, this will be noted in the facility's operating record. An incident report will be submitted to the Wisconsin Department of Natural Resources notifying of implementation within 15 days of the incident.

Exhibit E-1

Training Plan

PERSONNEL TRAINING

ABSTRACT

OBJECTIVE: The purpose of training is to familiarize employees with environmental regulations, records, and emergency procedures so they can perform their jobs in the safest and most efficient manner possible. The program is designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems.

TIME OF TRAINING

Job Title	Prior to Starting Work	On The Job	Annually	When Regulations or Procedures Change
Branch General Manager	X	X	X	X
Branch Administrator		X	X	X
Sales/Service Representatives	X	X	X	X
Warehouse Employees	X	X	X	X

OUTLINE OF TRAINING PROGRAM

Each employee receives adequate training to operate and maintain the facility safely, and to understand hazards unique to his or her job assignments. Exhibit E-1 contains the Training Plan. New Hire SPARK training (Safety, Products, and Regulatory Knowledge) and a Service Center training matrix are included in Exhibit E-2. Exhibit E-4 is an example training record form.

ORGANIZATION STRUCTURE AND JOB DESCRIPTIONS

Environmental compliance and training of branch employees is the responsibility of the Branch General Manager. The corporate regulatory compliance department, in turn, provides a training program to be executed annually. The training program is directed by personnel trained in hazardous waste management procedures and includes instruction on hazardous waste management for facility personnel. Exhibit E-5 contains example job descriptions.

These forms are subject to change and are included as examples only. Many training courses are completed electronically and records will also be maintained electronically.

Branch General Manager

The Branch General Manager is responsible for the business and environmental operations at the Service Center. The branch sales and service representatives, administrators, and warehouse employees report to the Branch General Manager. The Branch General Manager or his/her designee provides the training and materials necessary for the branch employees to execute their duties. With respect to environmental compliance, the Branch General Manager must:

- a. Keep the facility clean and orderly;
- b. Execute, or designate an employee to execute, the daily inspection, keep a written log, and remediate any problems;
- c. Know the potential hazards of the material and wastes handled at the site;
- d. Identify potential spill and fire sources and be able to execute the Contingency Plan;
- e. Inform all employees of their environmental responsibilities;
- f. Notify the proper authorities during an emergency, remediate the situation to the best of their abilities, and submit necessary reports with the company;
- g. Maintain all environmental records (such as manifests, training records, and spill reports) on file at the facility.

DESCRIPTION OF THE TRAINING PROGRAM

Employee training is accomplished using classroom, electronic (i.e. video, e-Learning), written, and on-the-job methods. The Training Department prepares a training program for employees and the Service Center personnel provide documentation that the program has been executed.

An employee is trained prior to starting, or as soon as he or she begins working (depending on his or her position) and annually thereafter. The EHS Department ensures that the Branch General Manager or his/her designate has received adequate training to train all branch personnel.

Training of New Branch General Managers

New Branch General Managers are trained before they begin their new positions. This training occurs on site, on-the-job, in off-site classroom training, electronic (i.e. video, e-Learning), written, and on-the-job methods. While being trained, a new Branch General Manager reviews all environmental records and learns the recordkeeping requirements. These records include manifests, personnel records, training records, facility inspection records, and spill reports.

The training culminates in additional training at the direction of an environmental professional. The training consists of an introduction to environmental law and a review of the Part B permit, including the Waste Analysis Plan, Preparedness and Prevention Plan, Contingency Plan, Training Plan, and Closure Plan. Additional time is spent reviewing past environmental compliance at the Branch General Manager's facility. Regulations unique to the state are discussed as well.

Training of New Branch Administrators

Branch administrators are trained in the proper recordkeeping procedures as soon as they begin working for Safety-Kleen. Additional training is overseen by the Branch General Manager or his/her designee and is completed within six months of starting. The training includes some of the items listed in the Example Training Plan that may be applicable to the branch administrator's job. In addition, the Contingency Plan must be reviewed with the Branch General Manager.

Training of New Sales and Service Representatives

New representatives are introduced to the Part B Permit which includes: Waste Analysis Plan, Preparedness and Prevention Plan, Contingency Plan, etc. A representative may also be trained as a designate for performing the facility inspection. Additional training is in the form of classroom, electronic (i.e. video, e-Learning), written, and on-the-job methods.

The Contingency Plan must be reviewed before the representative formally begins the new

position. Items such as those applicable in the Regulatory Training Matrix must be covered within six months of hire.

Training of New Material Handlers

A material handler is trained to maintain the Service Center and assist the other branch employees in their tasks. A material handler may also be trained as the designate for performing the daily inspection. Additional training may be in the form of videotape presentations, classroom, electronic (i.e. video, e-Learning), written, and on-the-job methods. The Contingency Plan must be reviewed with the Branch General Manager before the material handler formally begins his/her new position, and annually thereafter. Items such as those listed in the Example Training Plan must be explained within six months of starting.

Annual Training

On an annual basis, employees are trained using a program prepared and updated by the EHS Department. It includes updates on environmental regulations, an in-depth review of the Contingency Plan, and a review of RCRA inspection criteria.

All Service Center employees will review annually training items such as those listed in the Example Training Plan outline for branch employees. The annual training may vary from the topics listed in the Example Training Plan outline. This review may be in the form of videotapes and classroom instruction, electronic (i.e. video, e-Learning), written, and on-the-job methods. and will include discussion of the storage facility permit application. The EHS Department issues periodic memoranda on changes in environmental regulations, which all Service Center personnel must read and discuss. Example Annual Refresher Training Agendas are included in Exhibit E-3.

TRAINING RECORDS

All employee regulatory training must be documented. The training record will include job title, job description as well as documentation for completed training. Records of current employees will be kept at the facility until closure. Some training documentation will be maintained electronically.

Job Descriptions (Example)

Job Description

Job Title: Branch General Manager
Department: Branch Sales & Service
Reports To: District Manager
FLSA Status: Exempt
Approved By: SVP HR
Approved Date: 01/29/07

Summary: The Branch General Manager is responsible for financial and operational management including: financial performance against quota or budget (P & L), EH&S compliance through the Environmental Management System (EMS), and operational management of the facilities and of the human resources.

Essential Duties and Responsibilities include but are not limited to the following.

- Manage the branch operations including hiring, training, and supervision of the staff.
- Manage sales and service staff in achieving customer retention, on-time service performance, and accounts receivable goals by: observing corporate operating guidelines, training and reinforcing critical service skills, and working to prevent and resolve customer service issues.
- Conduct inspections and ride-alongs with sales and service staff to ensure timely and effective servicing of customers' equipment.
- Profit or loss of the facility(ies) by focusing on building new business relationships and maintaining existing customer bases and satisfaction.
- Prepare branch sales/service forecast and budget.
- Ensure compliance with all applicable environmental, health, and safety (EHS) requirements by working with corporate EHS resources to keep all training and record keeping up to date, and by monitoring daily operations to assure performance is within regulatory guidelines.
- Maintenance of branch fleet to company standards, assistance with branch incident alert and spill response systems, and control of branch inventory.
- Maximize collection of money at the time of service, collect on overdue accounts, and determine when to pull an account.
- Ensure that all branch customer service practices are conducted consistent with high ethical standards.

Supervisory Responsibility:

The Branch General Manager recommends hiring, training, scheduling, performance appraisal, promoting, compensation, corrective action and termination.

Qualifications: To perform this job successfully, an individual must be able to perform each essential duty satisfactorily. The requirements listed below are representative of the knowledge, skill, and/or ability required. Reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions.

Education and/Or Experience: Minimum of High School diploma or (GED). Bachelor's degree preferred. At least 5 years experience in a sales and service organization.

Certificates, Licenses, Registrations: Class B CDL, Haz Mat, Air Brakes and Tankers endorsement.

Physical Demands: While performing the duties of this job, the employee must frequently sit for long periods of time, use the computer, as well as occasionally lift up to 25 pounds. There will also be some occasional need for bending, kneeling, or reaching.

Work Environment: While performing the duties of this job, the employee has some exposure to warehouse as well as outside weather conditions. The employee is occasionally exposed to wet and/or humid conditions; extreme cold; extreme heat.

Job Description

Job Title: Branch Administrator
Department: Branch Services
Reports To: Branch General Manager
FLSA Status: Exempt
Approved By: SVP HR
Approved Date: 03/26/07

Summary: The Branch Administrator is an administrative position responsible for maintaining detailed and accurate company, branch, and customer files.

Essential Duties and Responsibilities include but are not limited to the following.

- Assembles packages of documents for Sales Representatives.
- Check Sales or Hazardous Waste documents turned in by Sales Representatives.
- Ensure proper completion of paperwork including manifests, and alert manager of errors.
- Provide customer service functions by responding to customer inquiries and/or complaints, handling or routing service questions, and solving problem accounts.
- Prepare Manual Forms, Manifests and LDR forms, as required.
- Distribute copies of service documents and manifests to customers, various Safety-Kleen locations, and to governmental agencies, as required.
- Contact customers delinquent in payment and coordinates pick-up of payments.
- Log wastes, adjusts service scheduling, prepares reports, completes MMVR reports and checks manifests for assigned territories.
- Provide other clerical support duties as requested.
- May conduct facility inspections
- May be designated emergency coordinator

Qualifications: To perform this job successfully, an individual must be able to perform each essential duty satisfactorily. The requirements listed below are representative of the knowledge, skill, and/or ability required.

Education and/Or Experience: High school diploma and six months+ related experience, and/or training.

Competencies and Skills: Customer Service, Attention to Detail, Recognize the importance of Safety, Time Management, Product Knowledge, Sense of Direction, and Organization skills.

Physical Demands: While performing the duties of this job, the employee must frequently sit at a work station using the computer.

Job Description

Job Title: MSS
Department: Sales
Reports To: District Sales Manager
FLSA Status: Exempt
Approved By: SVP HR
Approved Date: 01/29/07

Summary: The MSS will continually manage an account base outside of the ordinary service schedule. This position will also grow business internally and externally. The MSS will act as the primary point of contact for customers with questions / concerns / new business. This should be a motivated person who possesses consultative selling abilities and who is skilled at building long-term business relationships within the assigned sales territory.

Essential Duties and Responsibilities include but are not limited to the following.

- Completion of necessary paperwork (waste profiling, quotations etc).
- Communication with service, office, and warehouse staff.
- Build relationships with key buyers in territory.
- Assess current/potential business in existing accounts and create strategy to grow business.
- Analyze customer needs and design sales, customer service and account management processes to acquire and retain accounts.
- Prepare and deliver customer quotes and identify new solutions for customers
- Provide technical and sales assistance to customers.
- Serve as interface between customers and company by ensuring that customer needs are met and by handling customer complaints.
- Prepare sales plans and future period forecast's.
- Monitor and track sales plan to ensure sales quota is met; prepare regular status reports.
- Keep abreast of products, market conditions and competitive activities.

Qualifications: To perform this job successfully, an individual must be able to perform each essential duty satisfactorily. The requirements listed below are representative of the knowledge, skill, and/or ability required.

Education and/or Experience: Two years of college or specialized training (business or environmental) is required plus 1-3 years experience. Bachelor's degree plus coursework and certification is preferred. Alternative combinations of education and experience may be accepted in lieu of degree.

Competencies and Skills: Analytical, prioritization, organization, computer and leadership skills. Must be proficient working with spreadsheets as well as CRM software tools.

Physical Demands: While performing the duties of this job, the employee must frequently drive a car.

Job Description

Job Title: Customer Service Manager
Department: Branch Services
Reports To: Branch General Manager
FLSA Status: Exempt
Approved By: SVP HR
Approved Date: 01/29/07

Summary: The Customer Service Manager is responsible for ensuring optimum customer service leading to retention and expansion of the branch business. Key responsibilities include supervising customer service staff, ensuring services are completed in a timely manner, and managing customer relationships.

Essential Duties and Responsibilities include but are not limited to the following.

- Manage the branch customer service functions including hiring, training and supervision of the sales and service representatives (SSR).
- Manage sales and service staff in achieving customer retention, on-time service performance, and accounts receivable goals by: observing corporate operating guidelines, training and reinforcing critical service skills, and working to prevent and resolve customer service issues.
- Conduct inspections and ride-alongs with sales and service staff to ensure timely and effective servicing of customers' equipment.
- Direct branch service scheduling and logistics to ensure on-time performance for all customers by aligning territories, defining routes, and managing associated paperwork.
- Ensure SSR compliance with all applicable environmental, health, and safety (EHS) requirements by working with corporate EHS resources to keep all training and record keeping up to date, and by monitoring daily operations to assure performance is within regulatory guidelines.
- Work with Branch General Manager (BGM) to ensure effective operation of the branch including maintenance and operation of branch fleet to company standards, assistance with branch incident alert and spill response systems, and control of branch inventory.
- Administer branch accounts receivable program to maximize collection of money at the time of service, collect on overdue accounts, and determine when to pull an account.
- Ensure that all branch customer service practices are conducted consistent with high ethical standards.

Supervisory Responsibility:

The Customer Service Manager recommends hiring, training, scheduling, performance appraisal, promoting, compensation, and termination.

Qualifications: To perform this job successfully, an individual must be able to perform each essential duty satisfactorily. The requirements listed below are representative of the knowledge, skill, and/or ability required.

Education and/Or Experience: High school diploma or (GED). 3-5 years experience and/or related training.

Certificates, Licenses, Registrations: Class B CDL, Haz Mat, Air Brakes and Tankers endorsement.

Physical Demands: While performing the duties of this job, the employee must frequently stand, walk, bend, use the computer, reach, squat, stoop and twist. The employee must frequently carry, lift, pull or push up to 50 pounds. The employee will occasionally drive a large truck.

Work Environment: While performing the duties of this job, the employee is frequently exposed to warehouse and outside weather conditions. The employee is occasionally exposed to wet and/or humid conditions; extreme cold; extreme heat.

Job Description

Job Title: Sales and Service Representative
Department: Branch Services
Reports To: Branch Service Manager
FLSA Status: Exempt
Approved By: SVP HR
Approved Date: 01/29/07

Summary: Services SK machines at customer sites, sells new products to existing customers, removes waste from customer sites and provides on-site customer service.

Essential Duties and Responsibilities include but are not limited to the following.

- Receive manifests, labels, route schedule from office staff.
- Select, pull, and load needed inventory (empty drums, pig products, new machines, etc) per route schedule.

2. STORAGE TANK DECONTAMINATION				
<u>Assumptions:</u>				
- The tanks, piping and appurtenant equipment are decontaminated and remain in place				
- Rinsate sampling necessary because the tank will remain in place. Assumes 1 rinsate sample per tank.				
- Includes decontamination of the containment area				
- Assumes containment area to remain in place following decontamination				
- Assumes 1 rinsate sample required to leave containment in place				
- Assumes 2 soil samples required from beneath containment area. Actual number of samples will be based on engineer's inspection.				
- Tank Interior Square Footage (based on tank volume)				
- Tank 1			Square Footage	
- Tank 2 (IF APPLICABLE)			896	
			0	
	Total Tank Interior Square Footage		896	
- Tank Farm Containment Square Footage (includes floor and walls)			1359	
<u>Prime Contractor Costs</u>				
- Costs for oversight and engineers inspection included in Closure Certification Activity below				
- Collect Rinsate Sample(s) (1 per tank and 1 per containment)			0.5000	
Work Rate for Sampling (hours per sample)			2	
Number of Samples				
Labor and equipment per work hour (PPE Level D)	Labor/equipment	\$91.88	1.00	\$92
- Drilling for Soil Samples (2.5 in boring to 1 ft each)			0.3050	
Work Rate for Drilling (hours per foot)			2	
Number of Feet (subslab sample depth = 1 foot each)				
Labor and equipment per work hour (PPE Level D)	Labor/equipment	\$146.29	0.61	\$89
- Collect 2 Soil Samples			0.5000	
Work Rate for Sampling (hours per sample)			2	
Number of Samples				
Labor and equipment per work hour (PPE Level D)	Labor/equipment	\$91.88	1.00	\$92
<u>Subcontractor Costs</u>				
- Decontaminate waste AST, piping and appurtenant equipment			0.0405	
Work Rate to Pressure Wash (hours per square foot)			896	
Area of Tanks to be decontaminated				
Labor and equipment for tank decon (PPE Level C)	Labor/equipment	\$97.23	36	\$3,530
- Decontaminate Tank Containment Area			0.0405	
Work Rate to Pressure Wash 1 sq ft (hours per square foot)			1359	
Total Area of Containment (includes walls and floor)				
Labor and equipment for CSA decon (PPE Level D)	Labor/equipment	\$65.77	55	\$3,620
<u>Laboratory Subcontractor Costs</u>				
- Analyze rinsate sample(s) from tank(s) and containment area for VOCs, SVOCs and RCRA metals	VOCs @ \$189/sample SVOCs @ \$359/sample 8 RCRA Metals @ \$110/sample Total per sample cost	\$658	2	\$1,316
- Analyze soil sample(s) from containment area for VOCs, SVOCs and RCRA metals	VOCs @ \$189/sample SVOCs @ \$359/sample 8 RCRA Metals @ \$110/sample Total per sample cost	\$658	2	\$1,316
Activity 2. Subtotal				\$10,054

Table 1. Closure Cost Estimate Worksheet, Safety-Kleen Branch Service Center[Waukesha, WI]

Activity	Category	Hourly Rate or Unit Charge	Hours or Unit Estimate	Subtotal Cost
3. DECONTAMINATE THE RETURN/FILL STATION				
<u>Assumptions:</u>				
- Decontamination shall consist of washing with detergent/water solution and rinsing with high-pressure spray				
- Return/Fill structure and dock area will remain in place following decontamination				
- Drum washers to remain in place or sent offsite for reuse following decontamination				
- Rinsate sampling required from each drum washer to remain in place or sent offsite for reuse, and from containment				
- Assumes 2 soil samples required from beneath containment area. Actual number of samples will be based on engineer's inspection				
- Square footage used for decontamination includes containment, dock and drum washer units				
			Square Footage	
			540	
<u>Prime Contractor Costs</u>				
- Costs for oversight and engineers inspection included in Closure Certification Activity below				
- Collect Rinsate Samples (1 per drum washer plus containment)			0.5000	
Work Rate for Sampling (hours per sample)			3	
Number of Samples			1.50

RE: Safety-Kleen Systems, Inc.
Financial Assurance
January 25, 2013 Annual Inflation Increases

Dear Ms. Storck:

Enclosed are original insurance certificates issued by Indian Harbor Insurance Company for financial assurance coverage for Safety-Kleen's facilities located in Kaukauna and Waukesha.

The certificate has been amended, effective January 25, 2013, to reflect the annual inflation increase of the financial assurance. The increase was calculated by using information obtained on May 31, 2012 from the U.S. Department of Commerce, Bureau of Economic Analysis, Table 1.1.9 Implicit Price Deflators for Gross Domestic Product as indicated below:

2011 Annual GDP	113.361	divided by:
2010 Annual GDP	110.992	

Implicit Price Deflator for January 25, 2013 = 1.021 or 2.1%

If you have any questions, I may be reached at 803-473-4972 or at kathy.hodge@safety-kleen.com.

Sincerely,

Kathy Hodge
Manager, EHS Compliance Administration

Name and Address of Insurer (herein called the "Insurer"):

Indian Harbor Insurance Company, Seaview House, 70 Seaview Avenue, Stamford, CT 06902-6040

Name and Address of Insured (herein called the "Insured"):

Safety-Kleen Systems, Inc. 2200 South West Ave. Waukesha, WI 53186

Facilities Covered:

WID 981 097 769
Safety-Kleen Systems, Inc.
2200 South West Ave.
Waukesha, WI 53186

Closure Amount: \$108,237

Face Amount: \$207,659

Policy Number: PEC000953711

Effective Date: January 25, 2013

The Insurer hereby certifies that it has issued to the Insured the policy of insurance identified above to provide financial assurance for closure for the facilities identified above. The Insurer further warrants that such policy conforms in all respects with the requirements of ss. NR 664.0143(5), 664.0145(5), 665.0143(4) and 665.0145(4), Wis. Adm. Code, as applicable and as such regulations were constituted on the date shown immediately below. It is agreed that any provision of the policy inconsistent with such regulations is hereby amended to eliminate such inconsistency.

Whenever requested by the Wisconsin Department of Natural Resources (the Department), the Insurer agrees to furnish to the Department a duplicate original of the policy listed above, including all endorsements thereon.

After printing this label:

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Hazardous Waste Facility Certificate of Liability Insurance

August 30, 2012

Ms. Colleen Storck, Chief
Business Support & IT Section
Bureau of Waste and Materials Management
Wisconsin Department of Natural Resources
101 S. Webster Street
Madison, Wisconsin 53707

RE: Hazardous Waste Liability Insurance Policy Renewal

Dear Ms. Storck:

Enclosed is an original Hazardous Waste Facility Certificate of Liability Insurance, issued by Greenwich Insurance under policy number PEC0002102006, for the Safety-Kleen facilities in Wisconsin. The covered facilities are listed on an attachment to the Certificate. The policy has been renewed, effective September 1, 2012.

If you have any questions, please contact me at 803-473-4972 or at kathy.hodge@safety-kleen.com.

Sincerely,

Kathy Hodge
Manager, EHS Compliance Administration

HAZARDOUS WASTE FACILITY CERTIFICATE OF LIABILITY INSURANCE

1. Greenwich Insurance Company, the Insurer of, Seaview House, 70 Seaview House Avenue, Stamford, CT 06902-6040, address of Insurer, hereby certifies that it has issued liability insurance covering bodily injury and property damage to Safety-Kleen Systems, Inc., the Insured, of 2600 North Central Expressway, Suite 400, Richardson, TX 75080 in connection with the Insured's obligation to demonstrate financial responsibility under s. NR 664.0147 or 665.0147, Wis. Adm. Code. The coverage applies at EPA ID# _____, SEE ATTACHED for sudden and nonsudden accidental occurrences. The limits of liability are \$1,000,000 each occurrence and \$2,000,000 annual aggregate, exclusive of legal defense costs. The coverage is provided under policy number PEC002102006 issued on September 1, 2012. The effective date of said policy is September 1, 2012.
2. The Insurer further certifies the following with respect to the insurance described in Paragraph 1:
 - (a) Bankruptcy or insolvency of the Insured may not relieve the Insurer of its obligations under the policy.
 - (b) The Insurer is liable for the payment of amounts within any deductible applicable to the policy, with a right of reimbursement by the Insured for any payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated as specified in s. NR 664.0147 (6) or 665.0147 (6), Wis. Adm. Code.
 - (c) Whenever requested by the Wisconsin Department of Natural Resources (DNR) the Insurer agrees to furnish to the Department a signed duplicate original of the policy and all endorsements.
 - (d) Cancellation of the insurance, whether by the insurer, the Insured, a parent corporation providing insurance coverage for its subsidiary, or by a firm having an insurable interest in and obtaining liability insurance on behalf of the owner or operator of the hazardous waste management facility, will be effective only upon written notice and only after the expiration of 60 days after a copy of the written notice is received by the Department, and if the facilities covered by this insurance are in more than one state, each state agency regulating hazardous waste or the EPA Regional Administrator if the facility is located in an unauthorized state.
 - (e) Any other termination of the insurance will be effective only upon written notice and only after the expiration of 30 days after a copy of the written notice is received by the Department, and if the facilities covered by this insurance are in more than one state, each state agency regulating hazardous waste or the EPA Regional Administrator if the facility is located in an unauthorized state.

I hereby certify that the wording of this instrument is identical to the wording specified in s. NR 664.0151(10), Wis. Adm. Code, as the rules were constituted on the date first above written, and that the Insurer is licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more States.

Re: Zoning Verification Request
2200 S. West Ave.
Waukesha Service Center Relicensing
Safety-Kleen Systems, Inc.

Dear Ms. Taylor:

Thank you for your recent request for zoning verification and property information as related to the relicensing of the Waukesha Service. The property is zoned M-2, General Manufacturing District.

I am not aware of any open violations for the property or the service center to indicate either are noncompliant.

There are no new or additional requirements associated with the service center.

For your use and information, you can refer to our website for much of the zoning and property information I have provided. That information can be found at the following addresses:

Zoning Code Book: <http://www.ci.waukesha.wi.us/web/guest/chapter22>

Property Information: <http://www.ci.waukesha.wi.us/web/guest/propertyinformationviewer>

Feel free to get back to me if you have any questions or if you need more information.

Sincerely,

James B. Smith, P.E.
Chief Building Inspector/Zoning Administrator

Exhibit H-1

Estimated Air Emissions from Operations

Safety-Kleen - Waukesha Service Center
Air Emission Notes
May 3, 2001

Safety-Kleen operates the Waukesha facility to minimize air emissions from its daily operations. The following calculations include the Maximum Theoretical Emissions (MTE) which are based on a facility operating 24 hours per day. The attached calculations demonstrate the MTE for each air contaminant is below 5.7 lb./hour. Also, the MTE for perchloroethylene is 0.198 tons per year (TPY), which is below the 10 TPY level specified in NR 407.03 (2)(e).

Two spreadsheets are attached (each 5 pages long). The first spreadsheet (WAUK-MS00.XLS) shows typical annual emissions of parts cleaner solvent based on annual spent solvent throughput of 600,800 gallons. In this case, annual emissions are 1.39 TPY and maximum hourly emissions are 5.125 lb./hour for the 2.32 hours per day that the return and fill station is in use. Note that the return and fill may be in use for a longer period, however, the hourly emission rate would be lower.

The second spreadsheet (WAUK-MS-MTE.XLS) shows calculations for maximum theoretical emissions (MTE). To determine MTE, the facility-wide parts cleaner solvent throughput was set a level which would result in drum washing in the return and fill station occurring 24 hours per day (at a rate of 1.56 minutes per container). This throughput is 9,073,150 gallons of spent solvent and the annual VOC emissions would be 19.91 TPY with a maximum hourly rate of 5.61 lb./hour.

Air emissions have been calculated using AP-42 methods for breathing and working losses from storage tanks, container filling, tanker truck filling and fugitive emissions. For container filling in the return and fill station, (refer to page 5 of the calculations for additional details) emissions have been calculated using a method based on actual measurements taken at a Safety-Kleen facility. Two equations were developed based on the results of a drum weighing experiment, which determined actual measurements of solvent loss from the washing operation of three types of containers. The first equation describes solvent evaporation from containers during the time they are stacked and refilled after washing, using a calculated cleaning emission factor for each container type. The second equation describes evaporation from the drum washers during operation using a calculated emission rate per surface area. In addition, emissions resulting from the saturated vapor in each drum, which is displaced when the drum is opened and emptied, are included. Finally, emissions resulting from the drum spritzer, which is used as a final cleaning step for some containers are included.

Safety-Kleen Corp.

$$\text{TOTAL VOC [lb/yr]} = \text{Evap. rate [g/ft2-hr]} \times \text{Area [ft2/washer]} \times [\text{hrs/day}] \times \text{days/yr} \times [\text{\# of washers}] \times [0.0022 \text{ lb/g}]$$

4. Evaporative losses due to drum spritzer operations:

$$\text{TOTAL VOC [lb/yr]} = [\text{lb/container, emission rate}] * [\text{\# of containers/yr}]$$

Exhibit H-2

Heavy Liquid Determination (Spent Parts Washer Solvent)

WASTE SOLVENT – HEAVY LIQUID DETERMINATION

&

VAPOR PRESSURE INFORMATION

Heavy Liquid Determination:

In the annual Recharacterization for waste solvent, a total of three constituents are identified: Benzene (D018), Perchloroethylene (D039), and TCE (D040). The total concentration for these three constituents is 855.2 ppm or mg/l (see attached detailed table from annual Recharacterization (Attachment No. 1). The conversion from ppm or mg/l to percent shows that these three constituents make of 0.085%, which is less than 20%. Therefore, the waste solvent is a heavy liquid not a light liquid.

To further explain the vapor pressure of the waste solvent, Safety-Kleen did a study to determine the waste solvent vapor pressure at different temperatures. The vapor pressures were determined at ASTM D2789: Vapor Pressure – Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope. The isoteniscope data indicates the vapor pressure at 100 degree Fahrenheit (assuming this to be the high temperature in San Antonio TX branch) to be 0.03281 psi, which is below the maximum organic vapor pressure (11.1 psi) for these tanks under 40 CFR 264.1084(b)(1)(i). In addition, this study also obtained data for temperature up to 375 degrees Fahrenheit, and the vapor pressure at this temperature was 9.7 psi, which is still lower than 11.1 psi. We are enclosing a copy of the actual laboratory results for this study (see Attachment No. 2).

Vapor Pressure Determination:

In reference to the vapor pressure of the waste spent solvent, to further explain this issue, Safety-Kleen did a study to determine the waste solvent vapor at different temperatures. The vapor pressures were determined by ASTM D2789: Vapor Pressure – Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope. The isoteniscope data indicates the vapor pressure at 100 degree Fahrenheit (assuming this to be the high temperature in San Antonio TX branch) to be 0.03281 psi, which is below the maximum organic vapor pressure (11.1 psi) for these tanks under 40 CFR 264.1084(b)(1)(i). In addition, this study also obtained data for temperature up to 375 degrees Fahrenheit, and the vapor pressure at this temperature was 9.7 psi, which is still lower than 11.1 psi. We are enclosing a copy of the actual laboratory results for this study (see Attachment No. 2).

We are also attaching a copy of a Safety-Kleen memorandum dated August 2, 2000 in which detailed information is provided about the vapor pressure determination for the waste spent solvent. This memorandum contains actual test data from a representative set of samples that were used for the vapor pressure determination (see Attachment No. 3).

As clarification, the August 2, 2000 memorandum lists the vapor pressure for all samples as measured by isoteniscope. Data from five samples were excluded because these samples had high concentrations of water. The vapor pressure of waste @ 68 degrees Fahrenheit is 2.330kPa (17.5 mm Hg). An attempt was made to calculate the partial pressure due to water, and subtract that from measure total vapor pressure to

give the VOC-only vapor pressure. However, the calculated vapor pressure was greater than the measured total vapor pressure. As explained in the memorandum, the error is due to inaccuracy of water determination in a three-phase system (mineral spirits, water, and solids), which is difficult to sample accurately. In other words, the calculated VOC partial pressure was the difference between two large numbers, one of which had a probable error on the order of magnitude of the resultant difference.

Subject: Vapor Pressure of Spent Mineral Spirits Solvents

cc: John Schmitz

Several EHS field personnel had been asked to prove that the vapor pressure of the waste mineral spirits solvent that is bulked and stored at the Branches and at the Recycle Centers is below the 0.3 kPa (2.25 Torr) limit. Because regulators in several parts of the country have been insisting on actual test data rather than knowledge of the waste, we acquired a representative set of samples and submitted them for vapor pressure determination.

Each Recycle Center sent samples from two incoming truckloads of spent mineral spirits. These samples were sent to the Tech Center using the standard TCLP sampling kits and protocols. The vapor pressures were determined by Phoenix Chemical Laboratory, Inc. according to ASTM Standard Test Method D 2879 - 96, Vapor Pressure – Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope.

Table I identifies all the samples received and lists the vapor pressure data at 68 °F as reported by Phoenix Chemical Laboratory. Three of the samples were submitted in triplicate to establish the precision of the analysis.

Because the vapor pressure of interest for air regulations is the VOC composite partial pressure, the partial pressure due to the water in spent mineral spirits needs to be excluded from the total vapor pressure measured. Data from five of the samples were not used to calculate a mean because the calculated partial pressure for the water content of the sample was greater than the reported total pressure. Part of the discrepancy was due to the difficulty in accurately sampling a two-phase system for analysis. The flash point data on these samples is additional evidence that the higher vapor pressures measured were due to water and not due to VOCs. The water content for the remaining samples was less than 1%, and no correction was made for the calculated partial pressure of water as it was less than 1 Torr. Thus the vapor pressures listed are maximum VOC composite partial pressures.

For the 14 samples without excessive water, the mean vapor pressure at 68 °F was 0.57 Torr (0.08 kPa), with a standard deviation of 0.24. The mean flash point for these samples was 139 °F, and for all samples was 141 °F. These results correlate well with the mean vapor pressures at 68°F for our clean mineral spirits products, as determined by the same procedure in 1998:

SK Premium Gold Solvent:	0.15 Torr (n = 19)	(150°F mean flash point)
SK 105 Solvent Recycled:	0.39 Torr (n = 13)	(134°F mean flash point)
SK 105 Solvent Virgin	0.81 Torr (n = 6)	(106°F mean flash point)

The isoteniscope analysis reports for all samples, which list vapor pressures at multiple temperatures, are available if needed.

Subject: Final Case Closure With Conditions Met
Safety Kleen, 2200 S. West Ave., Waukesha, Wisconsin
WDNR BRRTS Activity # 02-68-246324

Dear Mr. Schoepke:

On February 9, 2006 your site as described above was reviewed for closure by the Department of Natural Resources. The Department reviews environmental remediation cases for compliance with state laws and standards to maintain consistency in the closure of these cases. On November 2, 2005, you were notified that conditional closure was granted to this case.

On January 9, 2006, the Department received correspondence indicating that you have complied with the conditions of closure which included abandonment of wells and removal of investigative wastes. Based on the correspondence and data provided, it appears that your case has been remediated to Department standards in accordance with s. NR 726.05, Wis. Adm. Code. The Department considers this case closed and no further investigation, remediation or other action is required at this time.

Your site will be listed on the DNR Remediation and Redevelopment GIS Registry of Closed Remediation Sites. Information that was submitted with your closure request application will be included on the registry. To review the sites on the GIS Registry web page, visit <http://dnr.wi.gov/org/aw/rr/gis/index.htm>. If your property is listed on the GIS Registry and you intend to construct or reconstruct a well, you will need Department approval. Department approval is required before construction or reconstruction of a well on a property listed on the GIS Registry, in accordance with s. NR 812.09(4)(w). To obtain approval, Form 3300-254 needs to be completed and submitted to the DNR Drinking and Groundwater program's regional water supply specialist. This form can be obtained on-line at the web address listed above.

Please be aware that this case may be reopened pursuant to s. NR 726.09, Wis. Adm. Code, if additional information regarding site conditions indicates that contamination on or from the site poses a threat to public health, safety or welfare, or the environment.

The Department appreciates your efforts to restore the environment at this site. If you have any questions regarding this letter, please contact me at 262-574-2146.

Sincerely,

A handwritten signature in cursive script that reads "Mark Drews". The signature is written in black ink and is positioned above the printed name.

Re: Case Summary and Close Out Request (Form 4400-202), Safety-Kleen Systems, Inc. Service Center, Waukesha, Wisconsin (USEPA ID # WID 981097769; FID # 268182310)

Dear Mr. Drews:

Safety-Kleen Systems, Inc. (S-K) has been working with the Wisconsin Department of Natural Resources (WDNR) to address corrective action requirements at the branch service center located at 2200 South West Avenue in Waukesha, Wisconsin. The purpose of this letter is to present a Case Summary and Close Out Request. A check for the required Closeout Review Fee (\$750.00) and GIS Registry Maintenance Fee (\$250.00) has also been included.

S-K submitted a case summary and close out form for the site to WDNR on November 13, 2001. WDNR conducted a site inspection and reviewed the case summary and close out form to evaluate this site for possible closure. In a letter dated October 16, 2002, WDNR denied case closure and identified additional Areas of Concern (AOCs) based on the site inspection and required further investigation activities be conducted.

S-K has since completed the additional WDNR-requested investigation activities including integrity inspections; completion of shallow borings and collection of soil quality samples; installation of an additional groundwater monitoring well; and completion of four (4) additional rounds of quarterly groundwater monitoring. In summary, the inspections confirmed the integrity of identified sumps of concern and the concentration of constituents of potential concern in collected soil quality samples were below applicable risk-based screening levels. Only one (1) constituent (vinyl chloride) was detected at concentrations slightly above the WDNR Protective Action Level (PAL) and Enforcement Standard (ES), in groundwater samples collected from one well (MW-5). As a result of these findings, S-K is submitting this request for case close out pursuant to NR726.05 (2)(b).

A Case Close Out Form and Summary (Form 4400-202; Revised May 2004) and supplemental information are presented as attachments to this letter. As requested in the Case Close Out Request Form Section I, required GIS registry information, is included as a separate, stand-alone attachment. All pertinent information is being provided in hard copy. Please note that some of the items requested in the

Mr. Mark Drews
September 9, 2005
Page 2

Case Close Out Form checklist are not applicable to the S-K Waukesha service center. The non-applicable items are identified on the Close Out Form checklist by placing of "NA" in the blank next to each section.

S-K looks forward to working with WDNR to complete the Case Closure process for the Waukesha Service Center Site. If you have any questions or require additional information, please contact me at (847) 468-6733.

Sincerely,

Robert A. Schoepke, P.G.
Director - Remediation

CASE SUMMARY AND CLOSE OUT REQUEST
FORM 4400-202 (R 5/04)

WDNR BRRTS CASE # 02 - 68 - 246324

WDNR SITE NAME : SAFETY-KLEEN SYSTEMS INC.-WAUKESHA

WISCONSIN DEPARTMENT OF NATURAL RESOURCES
Bureau for Remediation and Redevelopment

This form is intended to provide instructions and a list of information that must be submitted for evaluation for case closure, each time a request is made. The closure of a case means that the Department has determined that no further response is required at that time based on the information that has been submitted to the Department.

NOTICE: Completion of this form is mandatory for applications for case closure pursuant to ch. 292, Wis. Stats. and ch. NR 726, Wis. Adm. Code, including cases closed under ch. NR 746 and ch. NR 726. The Department will not consider, or act upon your application, unless all applicable sections are completed on this form and the closure fee and any other applicable fees, required under ch. NR 749, Wis. Adm. Code, Table 1 are included. It is not the Department's intention to use any personally identifiable information from this form for any purpose other than reviewing close out requests and determining the need for additional response action. The Department may provide this information to requesters as required by Wisconsin's Open Records law [ss. 19.31 - 19.39, Wis. Stats.].

In order to expedite the closure process, provide a complete and accurate closure package according to the following instructions, each time a closure decision is requested:

- Submit the Case Summary and Close Out Form and the required attachments as a stand-alone, **unbound** package. Include all information requested per section, as appropriate to the site, in the order shown. Include all attachments per section, as appropriate. Do not attach previously submitted reports. Correctly reference any reports in the case summary, as applicable.
- Include fees with this package at the time it is submitted to the department in order for the application to be considered complete.
- Specify your selected closure option.
- Include all **GIS Registry information** (in Section I) as a stand-alone document (*do not refer to materials in other attachments*). Include copies of **all off-source property and ROW notifications**.
- Place a ✓ (attached) or NA (not applicable) in the blank next to each attachment, in each section.
- Include a draft of the deed document with the close out application, if a **deed restriction** or **deed notice** is required as a condition of closure of the selected remedy. Include a maintenance plan, if it is required in the deed instrument.
- **Maps for the GIS Registry may not be larger than 8.5 x 14 inches**, unless maps are submitted in electronic form in portable document format (pdf) readable by the Adobe Acrobat Reader. For electronic document submittal requirements, see <http://www.dnr.wi.gov/org/aw/rr/archives/pubs/RR690.pdf>.
- Prepare maps according to the applicable portions of ss. NR 716.15(2)(h)1 and 726.05(3)(a)4.d. Prepare visual aids, including maps, plans, drawings, cross sections, fence diagrams, tables and photographs according to s. NR 716.15(2)(h)1. – 4.
- **Use a bold font** on information of importance on tables, maps and figures. A **bold font (for ES exceedances)** and *italics (for PALs)* are preferred when differentiation is necessary. **Please do not use shading or highlights** on any of the analytical tables (per s. NR 726.05(3)) and maps as the shading obscures the information that is scanned for inclusion in the GIS Registry.
- Put multiple tables submitted for contaminated media data (eg. pre- and post-remedial data) in chronological order. Include the level of detection for results which are below the detection level (i.e. do not just list as no detect (ND)). Summaries of all data should include information collected by previous consultants. Do not submit lab data sheets unless these have not been submitted in a previous report. Tabulate all data required in s. NR 716.15(2)(g)3 in the format required in s. NR 716.15(2)(h)3.
- Document free product recovery estimates as required in s. NR 708.15, if applicable.

WDNR BRRTS CASE # 02 - 68 - 246324 WDNR SITE NAME : SAFETY-KLEEN SYSTEMS INC.-WAUKESHA

Section A: Case History and Closure Pathway Selected

ATTACHMENTS:

- A-1 A brief site summary including results of all investigative activities, interim and remedial actions taken, a description of any residual soil and/or groundwater contamination and their locations, a description of any other media affected, and a description of how actual and potential impacts to receptors have been addressed.
- A-2 Site location map on USGS topographic base map.
- A-3 Site map including buildings, utilities, property lines of source property and impacted non-source properties, ground cover and supply wells. *These maps may be combined. A copy of the map(s) from Section I, #5 may be used.*
- A-4 Verification of the zoning for affected properties.

INFORMATION NEEDED:

1. Site Name SAFETY-KLEEN SYSTEMS, INC. SERVICE CENTER
 Street Address: 2200 SOUTH WEST AVENUE
 City/Zip Code: WAUKESHA/53189
2. BRRTS #: 02-68-246324
3. DNR FID #: 268182310 PECFA Claim#: NA
4. Responsible Party Name SAFETY-KLEEN SYSTEMS, INC.
 Mailing Address: 1502 E VILLA STREET, 2ND FLOOR City/Zip Code: ELGIN, ILLINOIS/60120
 Phone number: (847) 468-6733 Contact Person: ROBERT A. SCHOEPKE
5. Date of Incident/Discovery: NA Contaminant Type(s): LOW LEVEL VOCs
6. Quantity Released: NA
7. Land Use:
 Current : Residential Commercial Industrial Other
 If other, specify: MERCANTILE
 Planned Post Remediation : Residential Commercial Industrial Other
 If other, specify: MERCANTILE
8. Is a zoning change required? Y N
 If so, has it been completed for post remedial land use? Y N
9. 5 Acres ready for use (The total area in acres of all adjacent tax parcels owned by the same entity on the site where the contamination originated, rounding fractions to nearest .5 acre and noting >100 acres for acreages above 100 acres. For multiple discharges that are cleaned up concurrently, count the acres once.)
10. Geographic Coordinates (meters/ WTM83/91) E 663904 N 279263
11. Method Used to Obtain Geographic Coordinates:
 On-site using GPS equipment, converted or projected into WTM83/91 coordinates
 Used RR GIS Registry web site to get WTM83/91 coordinates
 Other (specify): _____
12. *Groundwater Contamination Remaining (>ES):
 On Source Property Y N
 Off Source Property Y N
13. *Residual Soil Contamination > Generic or Site-Specific RCL:
 On Source Property Y N
 Off Source Property Y N
14. Contamination in Right of Way: Y N
15. Closure Pathway Selected: check all that apply

Section B: Receptor Summary

ATTACHMENTS:

- NA Notification(s) regarding contamination in ROW
- NA Notification(s) to off-source property owners regarding sampling results

INFORMATION NEEDED:

1. Identify all pre-remedial actual receptors, the assessed risk and their locations (e.g., both on- and off-site utility corridors, basements or sumps of nearby buildings, direct contact threat from soil, water supplies, surface waters, sediments, vapors, etc.) *For definitions, refer to s. NR 700.03 (47), Wis. Adm. Code.*

NA

2. Have the remedial actions addressed the potential or actual impacts to these receptors?

X Y (Details in the case history summary (Section A)).

 N If no, please identify the nature of the remaining risk and the receptor at risk, if any:

NA

Section C: Soil Investigation Information

ATTACHMENTS:

- C-1a, C-1b Complete soil data summary table of field screening and laboratory analytical results, including all detects, regardless of ch. NR 720 standards, with dates, sample locations, depths and detection limits. Identify exceedances.
- C-2 Map(s) of all pre-remedial soil sampling locations: depicting all soil sample locations relative to site facilities. Note in bold font those sample locations that exceed ch. NR 720 RCLs (including free product location) and delineate the extent of contamination.
- NA Pre-remedial geologic cross-sections; including geology, source location(s), extent of soil and groundwater contamination, free product location/depth, soil sample locations, water table elevation, and bedrock elevation, if encountered.

INFORMATION NEEDED:

1. Extent Defined? X Y N If not, explain why. NO SOIL IMPACTS WERE IDENTIFIED ABOVE RCL'S AT THIS SITE

2. Soil Type(s): HOUGHTON MUCK

3. Depth of Contamination: Top: 0 FEET Bottom: APPROXIMATELY 4-5 FEET

4. Type of Bedrock: SILURIAN DOLOMITE Depth to Bedrock: APPROXIMATELY 100 FT

WDNR BRRTS CASE # 02 - 68 - 246324

WDNR SITE NAME : SAFETY-KLEEN SYSTEMS INC.-WAUKESHA

5. Is Any Contaminated Soil (Unsaturated or Saturated) in Contact With the Bedrock? Y X N

6. Measurable Free Product? Y X N Depth/Location: _____

Section D: Soil Remediation Information

ATTACHMENTS:

- NA Map showing remediated area (for example, excavation limits or area influenced by SVE) and locations of post-remediation soil samples (if any). This map should show the locations and extent of residual soil contamination exceeding ch. NR 720 RCLs. These samples should be noted in bold font. *A copy of the map(s) from Section I, #10, may be used.*
- NA Soil disposal documentation
- NA NR 720.19 analysis, assumptions and calculations for site specific RCLs (SSRCLs) , with justification
- D-1 Calculations and results of EPA Soil Screening Level Model.
- NA Post-remedial cross-section(s) with post remedial soil sampling results, if soil removal or treatment has occurred. Identify sample results and depths. *A copy of the cross-section(s) from Section I, #11, may be used or you may refer to the cross-section(s) in Section E, as appropriate.*
 see Section E

INFORMATION NEEDED:

1. Remedial Action Completed? Y X N
2. Were immediate or interim actions conducted? Y X N If yes, what action was taken?
NA
3. Brief description of remedial action taken:
NA
4. Were soils excavated? Y X N
Quantity: NA Disposal Method: NA
5. Final Confirmation Sample Collection Methods:
NA
6. Final Soil/Drill Cuttings Disposal Location:
DRILL CUTTINGS MANAGED THROUGH THE S-K WASTE MANAGEMENT SYSTEM.
7. Estimated volume and depth of in situ soils exceeding ch. NR 720 Table RCLs or Site Specific RCLs:
NA
8. Estimated volume and depth of in situ soils exceeding ch. NR 746 Table 1 or Table 2 or Site Specific RCLs (underground petroleum tank systems, as defined in ch. NR 746 only):
NA
9. s. NR 720.19 Analysis? Y X N
 Performance Standard -NR 720.19(2)
 SSRCL - NR 720.19(3) and (4),(5) or (6)
10. If the remedy includes a Soil Performance Standard, what type? X not applicable
 Cap Soil Building Natural Attenuation of Groundwater Other
Specify other: NA
11. Will the maintenance of the SPS be consistent with the planned post remediation land use?
 Y X N If No, please explain: NA
12. Is the EPA Soil Screening Level Model used as justification for closure of sites with residual contaminated soils?
 Y X N Are the input numbers used: Site Specific , or X WI Defaults?

Section E: Groundwater Information

ATTACHMENTS:

- E-1 Table identifying all contaminants, summarizing all pre- and post-remediation groundwater analytical results, with sample collection dates (*prepared in accordance with guidance document RR-628*)
- E-2 Groundwater sample location map showing the site facilities and all monitoring wells, sumps, extraction wells, and potable and non-potable wells.

WDNR BRRTS CASE # 02 - 68 - 246324 WDNR SITE NAME : SAFETY-KLEEN SYSTEMS INC.-WAUKESHA

- E-3 Isoconcentration map(s) when included as part of the site investigation or map(s) of the horizontal extent of contamination based on most recent data. *A copy of the map(s) from Section I, #7, may be used.*
- E-4a-E4-e A map showing groundwater flow direction(s) and summarizing the maximum variation in flow direction. *Multiple maps may be used. A copy of the map(s) from Section I, #9, may be used.*
- E-5 A table summarizing all groundwater elevations, with dates, and top and bottom elevations of well screens. *(Wells are to be referenced to national geodetic survey datum, as per NR 141.065(2)).*
- E-6a, E-6b Graphs and statistical analyses which demonstrate the dynamics of the groundwater plume, for sites requesting closure using natural attenuation that meet the criteria s. NR 726.05(2)(b) or of s. NR 746 (permeable soils). *Refer to WDNR publication RR-614 for guidance.*
- NA Geologic cross-sections showing extent of residual soil and/or groundwater contamination, as applicable. *A copy of the cross-section(s) from Section I, #11 may be used.*

INFORMATION NEEDED:

- Extent of Contamination Defined? X Y N N/A
- Remedial Action Completed? X Y N N/A
Brief Description of Remedial Action Taken: NATURAL ATTENUATION
- Depth(s) to Groundwater 5.02' (AVG) Flow Direction(s): SOUTH (AVG)
- Field Analyses? X Y N
Lab Analyses? X Y N
- 9 # of Sample Rounds
5 # of Sampling Points
5 # NR 141 Monitoring Wells Sampled
NA # Temporary GW Sampling Points Sampled
NA # Recovery Sumps Sampled
NA # Municipal Wells Sampled
NA # Private Wells Sampled
- Was DNR notified of substances in groundwater without standards? Y N X N/A
If yes, how many? What substances? NA
- Preventive Action Limit currently exceeded? X Y N If yes, identify location(s)
WELL MW-5
- Enforcement Standard currently exceeded? X Y N If yes, identify location(s)
WELL MW-5
- Measurable free product detected? Y X N Pre-remediation
 Y X N Post-remediation
- Was free product remediated? Y X N
Method: DRILL CUTTINGS MANAGED THROUGH THE S-K WASTE MANAGEMENT SYSTEM.
- Purge water or free product-groundwater mixture disposal method?
MANAGED THROUGH S-K WASTE MANAGEMENT SYSTEM; DISPOSED AT S-K OWNED PERMITTED TSD FACILITY.
- Potable wells within 1200 feet of site? X Y N
Have they been sampled? Y X N
Type (i.e. municipal, private, etc.)? PRODUCTION WELL (WISCONSIN UNIQUE NO. CE173)
[NOTE: Include wells on groundwater well location map]
- Has DNR been provided with all results of private well sampling? Y NA N
- Have well owners/occupants been notified of results? (Sec. B Attachments) Y NA N
(Results also need to be sent to the DNR Water Supply Specialist)

Section F. Other Contaminated Media Information:

ATTACHMENTS:

NA Table of analytical results for all contaminants for media other than soil or groundwater

WDNR BRRTS CASE # 02 - 68 - 246324 WDNR SITE NAME : SAFETY-KLEEN SYSTEMS INC.-WAUKESHA

INFORMATION NEEDED:

1. Have other media been impacted (either on-site or off-site e.g. sediment, utilities, air)? Y X N

Briefly describe type and extent of **all** contamination found in media other than soil or groundwater:
NA

2. Remedial action completed? Y N X N/A

Brief description of remedial action taken: NA

3. # of Post Remedial Sample Rounds: NA

of Sampling Points: NA

Field Analyses? Y X N

Lab Analyses? Y X N

Section G. Associated Site Closure Information:

ATTACHMENTS:

- NA Construction documentation or as-built report for any constructed remedial action or portion of, or interim action specified in s. NR 724.02(1), in accordance with s. NR 724.15.
- NA Maps and photos documenting the cap area, and/or integrity of the cap, with date.
- NA Description of any soil performance standard cover system used, including a description of how it meets the requirement to be protective until residual contaminant concentrations no longer pose a threat to public health, safety, welfare or the environment, per s. NR 720.19(2), s. NR 722.09(2) and (3).
- NA Maintenance plan with deed restriction for performance standard remedy. (per ss. NR 720.19(2) and 724.13(2))

INFORMATION NEEDED:

1. Enforcement actions closed out? Y N X N/A

2. Permits closed out? Y X N N/A

3. Describe how the following pathways are protected:

- a) Direct Contact Pathway: THERE WERE NO SOIL IMPACTS DETECTED ABOVE APPLICABLE RISK-BASED SCREENING LEVELS; THEREFORE, PROTECTION OF PATHWAY IS NOT REQUIRED AT THIS TIME
- b) Groundwater: THERE ARE NO IDENTIFIED GROUNDWATER RECEPTORS ON SITE AND NO CONSTITUENTS OF POTENTIAL CONCERN HAVE BEEN DETECTED IN THE MOST RECENT GROUNDWATER SAMPLES FROM DOWN GRADIENT ON SITE MONITORING WELLS; THEREFORE, PROTECTION OF PATHWAY IS NOT REQUIRED AT THIS TIME.
- c) Other: _____

H. Proposed Institutional Controls: (See Pub. RR-606)

ATTACHMENTS:

- NA RR GIS Registry of Closed Remediation Sites
- NA Soil
- NA Groundwater
- NA Both
- NA Draft deed document (Contact your DNR project manager for a template or guidance.)
- Type: NA Deed Restriction
- NA Deed Notice
- NA Maintenance Agreement
- NA Other: _____

WDNR BRRTS CASE # 02 - 68 - 246324 WDNR SITE NAME : SAFETY-KLEEN SYSTEMS INC.-WAUKESHA

I. Required GIS Registry Information: Provide the following information, as a separate, stand-alone attachment, in the order specified.

I-1 1. **Copy(s) of most recent deed**, including legal description(s), for all affected properties within or partially within the contaminated site boundary. (NOTE: If a property has been purchased with a land contract and the purchaser has not yet received a deed, a copy of the land contract which includes the legal description shall be submitted instead of the most recent deed. If the property has been inherited, written documentation of the property transfer should be submitted along with the most recent deed.)

I-2 2. **A copy of certified survey map(s)**, as required by s. NR 716.15(2)(j)2., or the relevant section of the recorded plat map for those properties where the legal description in the most recent deed refers to a certified survey map or a recorded plat map (lots on subdivided or platted property (e.g., lot 2 of xyz subdivision).

I-3 3. **The parcel identification number** (if county uses them) for each property within the contaminated site boundaries. Include the address of each property within the contaminated site boundary (regardless of whether parcel id # exists). **Geographic position** data for each property (meters in WTM83/91 projection) in compliance with the requirements of s. NR 716.15 (2)(k), unless this information was previously submitted to the agency with administrative authority for the site as part of the site investigation report, or unless the agency with administrative authority has directed that the responsible party does not need to provide geographic position data for a specific site.

I-4 4. **A site location map** which outlines all properties within the contaminated site boundaries on a U.S.G.S. topographic map or plat map in sufficient detail to permit the easy location of all parcels. If groundwater standards are exceeded, the map must also include the location of all municipal and potable wells within 1200 feet of the site. (If only one property, combine with map required in next item #5.)

I-5 5. **A map of contaminated properties within the site boundary** showing buildings, roads, property boundaries, contaminant sources, utility lines, monitoring wells and potable wells. This map shall also show the location of all contaminated public streets, and highway and railroad rights-of-way in relation to the source property and in relation to the boundaries of groundwater contamination exceeding ch. NR 140 enforcement standards, and/or in relation to the boundaries of soil contamination exceeding generic or site-specific residual contaminant levels as determined under s. NR 720.09, 720.11 and 720.19.

I-6b, I-6c 6. **A table of the most recent analytical results**, with sample collection dates from all monitoring wells, and any potable wells for which samples have been collected for groundwater, and/or showing results for all contaminants found in pre-remedial sampling and in the most recent soil sampling event, for soils (without shading or crosshatching). Note occurrence of free product.

I-7 7. **A groundwater isoconcentration map**, if required as part of the site investigation (SI), of the contaminated properties within the site boundaries. The map must include the areal extent of groundwater contamination exceeding PALS and the areal extent of groundwater contamination exceeding ESS, groundwater flow direction(s) based on the most recent data, and sample collection dates. **If an isoconcentration map was not required** as part of the SI, substitute a map showing the horizontal extent of contamination, based on the most recent data. Note free product location(s).

I-8 8. **A table of the previous 4 water level elevation measurements from all monitoring wells**, at a minimum, with the date measurements were made, is to be included. If present, note free product elevation and thickness on the table.

I-9a, I-9b 9. **A groundwater flow direction map** representative of groundwater movement at the site. If the flow direction varies by more than 20° over the history of the site, 2 groundwater flow maps showing the maximum variation in flow direction are to be submitted. *Prepare maps according to the applicable portions of ss. NR 716.15(2)(g)5-8 and 716.15(2)(h)1-2.*

NA 10. For sites closing with residual soil contamination, **include a map showing the location of all soil samples** and a single contour showing the horizontal extent of each area of contiguous residual soil contamination that exceeds generic or site specific residual contaminant levels.

NA 11. **A geologic cross section**, if required as part of the SI, showing vertical extent and location of residual soil contamination exceeding generic or site specific RCLs and residual groundwater contamination, source extent and location, isoconcentrations for all groundwater contaminants that exceed PALs that remain when closure is requested; water table and piezometric elevations, and the location and elevation of geologic units, bedrock, and confining units, if any.

I-12 12. **A statement signed by the responsible party**, which states that he or she believes that the legal description has been attached for each property that is within, or partially within, the contaminated site boundary. (The purpose of this requirement is that a legal description for each of the contaminated properties has been submitted. The RP is not required to attest to the accuracy of the attached legal descriptions.)

WDNR BRRTS CASE # 02 - 68 - 246324 WDNR SITE NAME : SAFETY-KLEEN SYSTEMS INC.-WAUKESHA

NA 13. A copy of the letters sent by the RP to all owners of properties with groundwater exceeding ESs as required by s. NR 726.05(3)(a)4.g. Letters sent to off-source properties must contain standard provisions in Appendix A of ch. NR 726. (Off source properties are listed separately on the GIS Registry with a link to the source property.) If the source property is owned by someone other than the person who is applying for case closure, a copy of the letter notifying the current owner of the source property that case closure has been requested should also be included.

NA 14. A copy of all written notifications provided to the city/village/municipal/state agency or other entity responsible for maintenance of a public street or highway or railroad right-of-way, within or partially within the boundaries of the contaminated site, for contamination exceeding groundwater ESs and/or soil exceeding generic or site specific RCLs.

NA 15. A list of addresses for all off-source properties affected by residual soil or groundwater contamination exceeding applicable standards.

I certify that, to the best of my knowledge, the information presented on and attached to this form is true and accurate. This recommendation for case closure is based upon all available data as of _____(date). I have read the Case Summary and Close Out Form instructions and all required information has been included.

CASE HISTORY AND CLOSURE PATHWAY SELECTED

ATTACHMENT A-1

Case Summary

Safety-Kleen Systems, Inc. (S-K) operates a branch service center in Waukesha, Wisconsin (Figure A-2). The Waukesha site is located with other light industries in the Waukesha Industrial Park South. The service center provides parts washing equipment and solvents to businesses and acts as an integral part of S-K's solvent distribution/recycling network. The service center is managed in accordance with an operating license originally issued on June 1, 1990 by the WDNR and the United States Environmental Protection Agency (USEPA). On April 24, 2003, WDNR confirmed that re-licensing of the facility was complete, and that the license renewal on October 1, 2002 is proof of the current license.

USEPA conducted a RCRA Facility Assessment (RFA) soil sampling program at this site in October 1989. Based on the RFA, USEPA identified the above ground used mineral spirits storage tank and former solvent loading/unloading pad as areas of concern (AOC). As a condition of the 1990 permit, S-K conducted a Release Assessment (RA) in October 1991 to determine the necessity for future corrective action activities and to confirm the RFA soil data. Wells MW-1 through MW-4 were installed as part of the October 1991 site assessment. Subsequently, S-K has been coordinating completion of corrective action activities with USEPA and WDNR.

Based on results of these investigation activities, S-K submitted a case summary and close out form for the site to WDNR on November 13, 2001. WDNR conducted a site inspection and reviewed the case summary and close out form to evaluate this site for possible closure. In a letter dated October 16, 2002, WDNR denied case closure and identified additional AOCs based on the site inspection and required further investigation activities be conducted.

On January 21, 2003, WDNR issued a Determination to Conditionally Approve the Feasibility and Plan of Operation Report (FPOR) for this site. S-K submitted an investigation work plan to address corrective action Condition #33 of the January 21, 2003 approval. The investigation work plan was approved in correspondence dated September 22, 2003. S-K performed a site investigation at the Waukesha, Wisconsin service center in November 2003 to assess potential impacts associated with identified AOCs and SWMUs at the site. A total of 16 soil borings and one monitoring well (MW-5) were installed as part of the November 2003 investigation. No constituents were detected in any of the November 2003 soil samples at concentrations exceeding applicable health-based standards. Two constituents (cis-1,2-dichloroethene and vinyl chloride) were detected in the November 2003 groundwater samples from Well MW-5 at concentrations slightly exceeding respective WDNR Groundwater Enforcement Standards (ES) and/or Preventative Action Limits (PAL). Results of the November 2003 site investigation were submitted to WDNR in a Site Investigation Report, dated February 17, 2004.

S-K performed a confirmation groundwater quality monitoring event at the facility on February 10, 2004 in order to verify the November 2003 groundwater hydrology and quality results. The concentration of cis-1,2-dichloroethene and vinyl chloride detected in the February 2004 groundwater sample from Well MW-5 were comparable to the November 2003 groundwater quality results. The detected concentration of cis-1,2-dichloroethene (0.0094 mg/L) in the February 2004 sample from Well MW-5 was slightly

above the respective PAL, but below the ES. The detected concentration of vinyl chloride (0.0032 mg/L) slightly exceeded both the respective PAL and ES. Results of the February 2004 monitoring event were submitted to WDNR as a Site Investigation Report Addendum, dated April 5, 2004.

As part of the April 5, 2004 Site Investigation Report Addendum, S-K proposed to conduct two semiannual groundwater quality monitoring events in June and December 2004. The stated objective of the semiannual groundwater monitoring events was to confirm residual groundwater quality and verify that the defined extent of groundwater quality impacts at this site is stable or decreasing. S-K performed the first of two semiannual events on June 23, 2004. No constituents were detected in the groundwater samples above the Wisconsin PAL or ES limits in the June monitoring event.

In correspondence dated April 26, 2004, WDNR provided S-K with comments on the Site Investigation Report and subsequent groundwater quality monitoring completed at the site. The letter indicated that S-K had substantially addressed the AOCs and SWMUs outlined as part of Condition #33 of the January 21, 2003 FPOR approval, including the used oil transfer pad and associated sump, discharge point of the used oil transfer pad sump, and sumps located within the warehouse building. Additionally, the April 2004 letter requested that S-K conduct additional soil assessment down-gradient (south) of the return/fill station in order to further define the potential extent of impacts identified as part of the November 2003 activities. As part of the September 3, 2004 Site Investigation Progress Report, S-K provided a work plan to install three soil borings down-gradient from the return/fill station.

The second semiannual groundwater quality monitoring event and additional soil boring investigation were implemented December 28, 2004. The results of the December 2004 groundwater monitoring event were generally consistent with those reported from previous monitoring events. No free-phase hydrocarbons were detected in any of the groundwater monitoring wells gauged as part of the December 2004 confirmation groundwater quality monitoring event. Two (2) VOCs, cis 1,2-dichloroethene (0.0062 mg/L) and vinyl chloride (0.0017 mg/L), were detected in the December 2004 sample from Well MW-5 at concentrations slightly above the respective ES, and/or PALs. No other VOCs were detected in any of the other December 2004 groundwater samples from the site.

Similar to previous soil investigations at the site, results of the December 2004 soil quality results were evaluated relative to WDNR Residual Contaminant Levels (RCLs) for both industrial and non-industrial soil published in Table 2 of the Department of Natural Resources Administrative Code, Chapter NR 720 (WDNR-RCL-IND and WDNR_RCL-RES, respectively); suggested generic RCLs for industrial and non-industrial contact pathways, taken from "Soil Cleanup Level for Polycyclic Aromatic Hydrocarbons (PAHs) Interim Guidance," April 1997 (PAH-RCL-IND and PAH-RCL-RES, respectively); and/or WDNR RCLs calculated via inputting Wisconsin default industrial and non-industrial parameters into the EPA Soil Screening Level (SSLs) Model (EPA-RCL-IND and EPA-RCL-RES, respectively). None of the detected soil concentration were above the applicable risk-based standards for industrial and non-industrial soils. Results of the December 2004 soil and groundwater sampling activities were submitted to WDNR as part of Site Investigation Progress Report, dated March 3, 2005.

S-K has completed considerable investigation activities at the Waukesha, Wisconsin service center in order to address the AOCs and SWMUs identified by WDNR as part of the January 21, 2003 FPOR approval. Results of the investigation activities have indicated that potential impacts to soil quality are below applicable EPA/WDNR RCLs for both industrial and non-industrial soils.

The nature, degree, and extent of potential groundwater quality impacts have also been defined at this site. Potential residual groundwater impacts above respective WDNR PALs and/or ESs are limited to two constituents (cis 1,2-dichloroethene and vinyl chloride) at one on-site well (MW-5). The groundwater concentrations of VOCs at the site are stable or decreasing due to natural attenuation. Mann-Kendall statistical analysis was completed on the groundwater data for monitoring Well MW-5. The statistical analysis required four (4) data points, which were entered from the last four (4) sample results from Well MW-5. Two (2) constituents (cis-1,2-dichloroethene, and vinyl chloride) were evaluated using the Mann-Kendall statistical analysis. Both constituents displayed decreasing trends (non statistically significant) with cis-1,2-dichloroethene decreasing at 0.002 mg/L per year and vinyl chloride decreasing at 0.0006 mg/L per year (Attachment E-6).

There is one off-site production well (Wisconsin unique No. CE173) within a 1,200 foot radius of the S-K Waukesha facility (Attachment I-4). Well CE173 lies approximately 1,200 ft to the south-east of the S-K Waukesha service center. The predominant flow direction across the service center is to the south. This production (non-community/industry) well is cased through the overburden to a depth of 43 feet and continues to a total depth of 363 feet. On-site monitoring wells are screened in the overburden with a total depth ranging between 10 and 20 feet deep. Since no VOCs have been detected over ES or PALs in the on-site down-gradient sentinel well (MW-4) since the Well was installed in 1991, the potential for off-site groundwater impacts is limited.

S-K believes the Waukesha Facility is suitable for case closure for soil, since detected concentrations are less than the Generic RCLs (NR 720.09/720.11). Case closure for groundwater through natural attenuation (NR 726.05(2)(b)) also appears to be appropriate at this time.

Notes:
 WDNR-RCL-IND - RCLs for industrial soil per Department of Natural Resources Administrative Code Chapter NR 720, Table 2.
 WDNR-RCL-RES - RCLs for non-industrial soil per Department of Natural Resources Administrative Code Chapter NR 720, Table 2.
 EPA-RCL-IND - RCLs determined using EPA Soil Screening Level Web Site with Wisconsin default industrial parameters (NR 720.19) as input
 EPA-RCL-RES - RCLs determined using EPA Soil Screening Level Web Site with Wisconsin default non-industrial parameters (NR 720.19) as input
 PAH-RCL-IND - Suggested generic RCLs for industrial contact pathway from "Soil Cleanup Levels for Polycyclic Aromatic Hydrocarbons (PAHs) Interim Guidance", April 1997
 PAH-RCL-RES - Suggested generic RCLs for non-industrial contact pathway from "Soil Cleanup Levels for Polycyclic Aromatic Hydrocarbons (PAHs) Interim Guidance", April 1997
 c - Carcinogenic
 nc - Noncarcinogenic
 --- Not applicable or not available
 inh RCLs determined using EPA Soil Screening Level Web Site with Wisconsin default industrial parameters for inhalation (NR 720.19) as input.
 ing RCLs determined using EPA Soil Screening Level Web Site with Wisconsin default industrial parameters for ingestion (NR 720.19) as input.

SOIL SCREENING GUIDANCE FOR CHEMICALS

Soil Screening Guidance for Chemicals

Equation Values for Ingestion (Industrial)

Noncarcinogenic Parameter	Value	Carcinogenic Age-adjusted Parameter	Value	Carcinogenic Nonadjusted Parameter	Value
Target Hazard Quotient (unitless)	1	Target Risk (unitless)	1.0E-7	Target Risk (unitless)	1.0E-6
Body Weight (kg)	70	Adult Body Weight (kg)	70	Body Weight (kg)	70
		Child Body Weight (kg)	15		
Exposure Duration (yr)	25	Adult Exposure Duration (yr)	24	Exposure Duration (yr)	25
		Child Exposure Duration (yr)	6		
Exposure Frequency (day/yr)	250	Exposure Frequency (day/yr)	350	Exposure Frequency (day/yr)	250
Intake Rate (mg/day)	100	Adult Intake Rate (mg/day)	100	Intake Rate (mg/day)	100
		Child Intake Rate (mg/day)	200		
		Average Lifetime (yr)	70	Average Lifetime (yr)	70
		Age-adjusted Ingestion Factor (mg-yr/kg-day)	114.29		

Soil Screening Levels for Ingestion (mg/kg)

Analyte	Cas Number	Oral RfD	Oral Slope Factor	Noncarcinogenic	Carcinogenic (Age-adjusted)	Carcinogenic (Nonadjusted)
Acetone	67641	9.00E-01 ^a		9.20E+05		
Bis(2-ethylhexyl)phthalate	117817	2.00E-02 ^a	1.40E-02 ^a	2.04E+04	4.56E+00	2.04E+02
Dichlorobenzene, 1,2-	95501	9.00E-02 ^a		9.20E+04		
Dichlorobenzene, 1,4-	106467		2.40E-02 ^b		2.66E+00	1.19E+02
Ethylbenzene	100414	1.00E-01 ^a		1.02E+05		
Methyl Ethyl Ketone	78933	6.00E-01 ^a		6.13E+05		
Naphthalene	91203	2.00E-02 ^a		2.04E+04		

Pyrene	129000	3.00E-02 ^a	3.07E+04
Toluene	108883	2.00E-01 ^a	2.04E+05
Trimethylbenzene, 1,2,4-	95636	5.00E-02	5.11E+04
Trimethylbenzene, 1,3,5-	108678	5.00E-02	5.11E+04

Soil Screening Guidance for Chemicals

Equation Values for Ingestion (Non-Industrial)

Noncarcinogenic Parameter	Value	Carcinogenic Age-adjusted Parameter	Value	Carcinogenic Nonadjusted Parameter	Value
Target Hazard Quotient (unitless)	.2	Target Risk (unitless)	1.0E-7	Target Risk (unitless)	1.0E-6
Body Weight (kg)	15	Adult Body Weight (kg)	70	Body Weight (kg)	70
		Child Body Weight (kg)	15		
Exposure Duration (yr)	6	Adult Exposure Duration (yr)	24	Exposure Duration (yr)	25
		Child Exposure Duration (yr)	6		
Exposure Frequency (day/yr)	350	Exposure Frequency (day/yr)	350	Exposure Frequency (day/yr)	250
Intake Rate (mg/day)	200	Adult Intake Rate (mg/day)	100	Intake Rate (mg/day)	50
		Child Intake Rate (mg/day)	200		
		Average Lifetime (yr)	70	Average Lifetime (yr)	70
		Age-adjusted Ingestion Factor (mg-yr/kg-day)	114.29		

Soil Screening Levels for Ingestion (mg/kg)

Analyte	Cas Number	Oral RfD	Oral Slope Factor	Noncarcinogenic	Carcinogenic (Age-adjusted)	Carcinogenic (Nonadjusted)
Acetone	67641	9.00E-01 ^a		1.41E+04

SURVEYOR'S CERTIFICATE

STATE OF WISCONSIN)
MILWAUKEE COUNTY) SS

I, Stanley J. Potrykus, a Registered Land Surveyor, do hereby certify:
That I have surveyed, divided and mapped a part of the NW 1/4 of the NE 1/4 of Section 22, T 6 N, R 19 E, in the City of Waukesha, Waukesha County, Wisconsin, bounded and described as follows: Commencing at the Northeast corner of said NE 1/4 Section; thence S 88° 33' 47" W, 80.02 feet; thence S 0° 22' 10" W, 170.35 feet; thence S 79° 17' 38" W, 1276.65 feet to the place of beginning of the lands to be described; thence S 76° 27' 53" W, 359.51 feet; thence N 46° 53' 41" W, 153.44 feet; thence S 43° 06' 19" W, 315.90 feet; thence S 33° 45' 55" E, 817.90 feet; thence N 87° 44' 22" E, 222.75 feet; thence N 0° 01' 00" E, 881.08 feet to the place of beginning.

That I have made this survey, land division and map by the direction of Bryce P. Styza, owner of said land.

That such map is a correct representation of all the exterior boundaries of the land surveyed and the land division thereof made.

That I have fully complied with the provisions of Chapter 236 of the Wisconsin Statutes and Chapter 23 of the City of Waukesha Ordinance in surveying, dividing and mapping the same.

My Commission Expires

PLAN COMMISSION APPROVAL

APPROVED by the Plan Commission of the CITY OF WAUKESHA on this 14 day of December, 1988.

[Signature]
Frank Hedgcock, Secretary

[Signature]
Paul G. Vrakas, Chairman

COMMON COUNCIL APPROVAL

APPROVED by the Common Council of the CITY OF WAUKESHA on this 20th day of December, 1988.

[Signature]
Paul G. Vrakas, Mayor

[Signature]
Marie Bieber, Deputy City Clerk

ATTACHMENT I-3

Parcel Identification Number = WAKC1381001 .

Property Address = 2200 S WEST AV WAUKESHA, WISCONSIN, 53189 .

Legal Description = LOT 1 CSM NO 4743 (V38 CSM P175) & PARCEL 4-CMW NO 5736 (V46 CSM P298) PT NE ¼ SEC 22 T6N R 19E 4.94 AC R837/807 & R1082/1189 .

Zoning = MERCANTILE .

Geographic Position Data (meters in WTM83/91 projection) = 663904, 279263 .

BASEMAP - U.S.G.S. 7.5-minute Topographic Quadrangle; Muskego, WI 1959, rev. 1994

88° 13' 00" W

EXPLANATION

-  1200' RADIUS FROM FACILITY BOUNDARY
-  AR092 WATER SUPPLY WELL W/ WISCONSIN UNIQUE WELL NUMBER LOCATED NEAR FACILITY

NDs determined using EPA Soil Screening Level Web Site with Wisconsin default industrial parameters (NR 720.19) as input.

NDs determined using EPA Soil Screening Level Web Site with Wisconsin default non-industrial parameters (NR 720.19) as input.

Aggregated generic RCLs for industrial contact scenario from Table 1 of "Soil Cleanup Levels for Polycyclic Aromatic Hydrocarbons (PAHs) Interim Guidance", April 1997.

Table I-6b

Description of Facility Operations

The Waukesha facility is an accumulation point for many spent materials generated by Safety-Kleen customers, the majority of whom are small quantity generators. Wastes are ultimately transported to a Safety-Kleen recycling center or a contract reclaimer for processing. The facility is located on 4.95 acres on the west side of West Avenue with the following structures:

- A 5,600 square foot building with office and warehouse space which includes one permitted container storage area
- A solvent return and fill station
- One tank farm with three vertical aboveground storage tanks in concrete diking: two nominal 15,000 gallon tanks for solvent product storage, and one nominal 15,000 gallon tank for spent mineral spirits solvent
- One tank farm with three storage tanks and space for three additional tanks: one tank is currently used for storage of Icebreaker™ / Bug Buster™ Windshield Washer Fluid (blended), one contains product Khameleon Antifreeze™ and one is available for used oil storage (or other bulk product)
- Two metal storage shelters, each covers 300 square feet
- 15,000 gallon tank for solvent product storage, one nominal 13,500 gallon tank for spent mineral spirits solvent, and a 12,000 gallon tank is used for mineral spirits product storage
- Various metal storage shelters that may be used for storage of product or transfer wastes

Operations Subject to Hazardous Waste Licensing Requirements

Safety-Kleen began operating at the Waukesha location in 1985. The Safety-Kleen Waukesha Service Center is located in an industrial park setting located at 2200 S. West Avenue in the City of Waukesha.

Safety-Kleen provides parts washing equipment and solvents to businesses in southeastern Wisconsin. The primary business is the parts cleaner service, which involves leasing a parts cleaner unit containing a parts cleaner material such as petroleum naphtha solvent, immersion cleaner (a naphtha blend) or aqueous cleaner. On a regularly scheduled basis, Safety-Kleen services the parts cleaner unit and replaces the spent material with clean product. The spent material is brought back to the Safety-Kleen Waukesha Service Center where it is stored.

In addition to the parts cleaner operations, Safety-Kleen services dry cleaners and the automobile body repair business. Dry cleaning wastes (spent filter cartridges and still bottoms contaminated with dry cleaning solvents, and various solvent thinners and paints collected from the automobile body repair industry) are stored at the Safety-Kleen Waukesha Service Center.

The spent naphtha is returned to the Service Center in 5, 16 and 30 gallon containers which are emptied and cleaned at the return and fill station. The spent naphtha solvent is pumped from the return and fill station into a 15,000 gallon above ground tank located in a 3 pack tank farm.

In addition to the above ground hazardous waste storage tank, Safety-Kleen has two designated areas used to store containers of hazardous waste. The container storage area (CSA 1) is located in a 5,600 square foot warehouse with offices, and has a maximum storage capacity of 3,927 gallons. The second container storage area (CSA 2) at the Waukesha facility is the metal storage shelter south of the building. No more than 2,184 gallons of hazardous and non-hazardous waste will be stored in the CSA 2 at any time. The total permitted capacity is 21,111 gallons.

The Waukesha Service Center stores the various types of waste until they are transported to a Safety-Kleen recycling center, a contract reclaimer, or other permitted facility where the wastes are recycled so they can be reused as product.

Hazardous Waste Licensing Requirements

An initial Hazardous Waste Storage License was issued by the WI Dept. of Natural Resources on June 1, 1990. The facility was relicensed April 24, 2003, and this license will expire April 24, 2013. Safety-Kleen Systems, Inc. intends to continue operations of this hazardous waste facility and has begun the relicensing process with the WI Dept. of Natural Resources.

The permit covers the following areas of the facility's operations:

- Authorized wastes;
- Operating conditions for proper storage;
- Facility inspections;
- Site security;
- Personnel training;
- Emergency prevention and response procedures;
- Reporting and record keeping;
- Closure requirements and financial assurance; and
- Liability coverage.

As part of the relicensing requirements of the Wisconsin Administrative Code, Safety-Kleen is required to hold this public meeting during which we are asking for your questions regarding our operations and activities at this facility.

If you have questions or require additional information, please contact:

RE: Pre-Application Meeting and Public Notice
Safety-Kleen Systems, Inc. WID 981 097 769
2200 S. West Avenue
Waukesha, WI 53189

Dear Ms. Miller:

As required by ss. NR 670.431(4) Wis. Adm. Code, Safety-Kleen Systems, Inc. has made the required public notices as follows:

Newspaper Notices:	Publish/Air Date:	Proof:
Wisconsin State Journal	August 6, 2012	Proof of Publication Affidavit
Waukesha Freeman	August 4, 2012	Copy of paper publication
Location Radio Station:		
WISN-1130	August 3, 2012	Text of Notice/ Email Receipt

I have included the referenced Proof of compliance for your reference.

Unless advised otherwise, submission of this information in this electronic format will meet the Notice to the Department requirement of ss. NR 670.431(4).

Please contact me if you questions or require additional information.

Sincerely,

Kelly Dale Taylor, CHMM
Environmental, Health & Safety Manager

NOTICE OF APPLICATION TO RE-LICENSE HAZARDOUS WASTE FACILITY
Public Hearing Notice
Safety-Kleen Systems, Inc.
WID081097769 FID268182310

Safety-Kleen Systems, Inc. operates a licensed hazardous waste storage facility at 2200 S. West Avenue in Waukesha, WI. An initial Hazardous Waste Storage License was issued by the WI Dept. of Natural Resources on June 1, 1980. The facility was relicensed April 24, 2003, and this license will expire April 24, 2013. Safety-Kleen Systems, Inc. intends to continue operations of this hazardous waste facility and has begun the relicensing process with the WI Dept. of Natural Resources.

The facility is located on 6.13 acres on the west side of West Avenue with the following structures: a 5,600 square foot building with office and warehouse space which includes one licensed container storage area; a solvent return and fill station; one licensed 15,000 gallon tank in concrete diking for spent solvent storage; and a licensed metal storage shed. The total licensed hazardous waste storage capacity is 21,111 gallons. There are additional storage areas and tanks used for non-hazardous waste or product storage.

The Waukesha facility is an accumulation point for many spent materials generated by Safety-Kleen customers. At the Waukesha facility, spent solvent (petroleum naphtha/mineral spirits) is received in non-bulk containers. The contents are transferred to the bulk storage tank via the return and fill station. The emptied containers are cleaned and refilled with clean product for the next day's services. Periodically (approximately once per week) a tanker truck is dispatched from Safety-Kleen's Dolton, Illinois Recycle Center to deliver a load of clean solvent and to collect the spent solvent at the facility. All other wastes received at the Waukesha facility are stored in the original shipping container. When sufficient quantities are accumulated (usually twice per week), a box trailer is dispatched to deliver products needed and to transport the containers of waste to a Safety-Kleen Service/Recycle Center for processing. The Waukesha facility generally operates 5 days per week, from 6:00 am until 7:00 pm. All wastes are ultimately transported to a Safety-Kleen recycling center or a contract reclaiming for processing and there is no onsite processing or disposal.

The license application does not propose to change the amount or types of hazardous wastes stored under the current licenses (Tank Storage License 03246 and Container Storage License 06004).

The public is invited to a public hearing and open house at the facility on 09/06/2012 at 06:00 PM - 8:00 PM. A copy of the permit application will be available for review during this time. For further information or if special access to participate in the meeting is required, please contact Kelly Taylor at Safety-Kleen Systems, Inc. at 608-298-8420 at least 72 hours before the meeting.

Location of Public Hearing: Safety-Kleen Systems, Inc. 2200 S. West Avenue Waukesha, WI 53189
Please call 262-549-3011 if directions to the facility are needed.

RADIO ANNOUNCEMENT FOR THE APPLICATION OF A HAZARDOUS WASTE STORAGE LICENSE
FOR SAFETY-KLEEN SYSTEMS, INC.

Safety-Kleen Systems, Inc. operates a licensed hazardous waste storage facility at 2200 S. West Avenue in Waukesha, WI. An initial Hazardous Waste Storage License was issued by the WI Dept. of Natural Resources on June 1, 1990. The facility was relicensed April 24, 2003, and this license will expire April 24, 2013. Safety-Kleen Systems, Inc. intends to continue operations of this hazardous waste facility and has begun the relicensing process with the WI Dept. of Natural Resources.

The public is invited to a public hearing and open house at the facility on 09/06/2012 at 06:00 PM – 8:00 PM. A copy of the permit application will be available for review during this time.

For further information or if special access to participate in the meeting is required, please contact Kelly Taylor at Safety-Kleen Systems, Inc. at 608-298-6420 at least 72 hours before the meeting.

Location of Public Hearing: Safety-Kleen Systems, Inc. 2200 S. West Avenue Waukesha, WI 53189

Re: Safety-Kleen Systems, Inc. 2200 S. West Avenue Waukesha, WI 53189
Notice of Public Meeting

Safety-Kleen Systems, Inc. has been operating a Service Center at the above-referenced address since 1985. The Safety-Kleen Waukesha Service Center was initially issued a hazardous waste storage license on June 1, 1990 and a subsequent license on April 24, 2003. The licenses are effective for 10 years. Safety-Kleen is seeking relicensing of the Service Center.

By state statute, Safety-Kleen is required to hold a Pre-Application public meeting and notice. The notice has been provided as:

Newspaper Notices:	Publish/Air Date:
Wisconsin State Journal	August 6, 2012
Waukesha Freeman	August 4, 2012
Location Radio Station:	
WISN-1130	August 3, 2012

Attached is a copy of each of the newspaper notices. This information is being provided to you as required by ss. NR 670.431(4).

If you have questions or require additional information, I can be reached at 608-298-6420 or via email at Kelly.d.taylor@safety-kleen.com.

Sincerely,

Kelly Dale Taylor, CHMM
