

Integrated Watershed Management Committee Interviews – A Few Recommendations

- 1) Continue working cooperatively with WSC on these topics.
- 2) Validate the Storm Water related themes with less experienced staff (ideally staff with 3 to 5 years experience).
- 3) As part of the Waterways restructure, consider assigning liaison roles to water quality based programs, such as Storm Water, Water Quality, etc.
- 4) Develop job aids for both Waterways and Storm Water Programs that explain the considerations that can be examined for utilizing flexibility (such as “net environmental benefit” or “maximum extent practicable”).
- 5) Can the Waterways program develop a team whose core focus is working with municipalities that need to implement MS4 water quality projects?
- 6) Distribute a list of Watershed Planning tools/information that can be shared with staff from the Waterways and Storm Water Programs.
- 7) Establish regular collaborative opportunities between Waterways, Storm Water and other water quality based programs (TMDL, Non-Point, etc.).
